intended results in the image size reducing, scaling to a lower
```

resolution gives a larger image. It is therefore imperative to scan the image at the resolution of your output device to obtain best results.

Vector graphics (like vector fonts) are a whole new ball game. They are not made up of individual pixels. Instead, they are constructed from lines and bezier curves and the length, angle and relative positioning of these elements in relation to each other, is stored as mathematical data rather than storing the actual lines and curves. The advantages of this method are much smaller file sizes and resolution independence. Scale a well drawn vector graphic as small or as large as you like and you retain the quality. This degree of flexibility is not possible with bitmap images. Atari owners may already be familiar with vector graphics in GEM Metafile or Calamus CVG formats.

How The Images Were Converted

The files started life as large IMG scans, from various PD sources, and were then vectorised with the truly excellent Convector 2. This can be set at various levels of accuracy, giving a range of effects from extremely accurate auto-tracing to a crude, almost 'woodcut' effect in which triangles and rhomboids replace shapes and lines. The majority of the images on these discs have been vectorised at the highest level of accuracy.

Invision was used to thicken and smooth any bitmap image whose fine lines would have been lost during vectorisation. Each one of these 445 images had to be edited to some degree or other. Convector 2 has a 'filter/smooth' routine which can be used to remove any stray dots or irregularities from a scan, but it's a rare image that will vectorise well without a certain amount of tweaking at the bitmap stage. Megapaint II was used to sharpen the images to ensure the best possible results.

What They've Been Tested On

Each file has been checked with Calamus v1.09n, running on a 4 Mb STe with a mono monitor. The majority of them have also been run through O-Line Art, and some through Calamus SL so there's no reason to believe that they'll misbehave in any other program.

About VECTOR ART '97

Vector Art '97 is a collection of CVG vector graphics. These can be used with any version of Calamus or with Kandinsky 2 (registered version), Outline Art, DA's Vector or Arabesque. There are probably a few other packages which also support the CVG format. If your Desktop Publishing program does not support CVG, just load the graphics into Kandinsky and re-save them in GEM format. Every DTP package handles GEM files. Vector Art '97 consists of 445 images

grouped into 30 logical categories (including scrolls, borders, animals, business, food, occasions, humour and symbols). Vector Art '97 is available now for only ?10 + P&P (one pound UK, two pounds Europe, three pounds rest of world). Payment can be made by credit card (Visa, Access, Mastercard, Eurocard accepted) or UK cheque/PO. Overseas customers not paying by credit card should make payment in UK pounds sterling using a cheque drawn on a UK bank, International Money Order, Post Giro, American Express Money Order or Canadian Postal Order.

1764. Another NEW Atari Game

Floppyshop, Aberdeen, Scotland. 30th April 1997
**********************************************************************

*****************
* PRESS RELEASE *
*****************

**************************************
* NEW RELEASE - TETRIS II STRIKES BACK *
**************************************
```

Floppyshop are pleased to announce the release of Beast Software's latest release, Tetris II Strikes Back. Tetris is one of the oldest computer games around, having made an appearance on near enough every computer platform from the ZX Spectrum to the PC. The first Atari version was written by a team of Russian programmers. There have been many attempts at Tetris clones over the years but the latest, Tetris II, is the best ever. It is called Tetris II for two reasons! It includes two versions of Tetris and has a two player option.

For those who have not played Tetris before, here's a quick run down. Coloured blocks of different shapes and sizes fall from above. Your aim is to guide them as they fall so that they slot into each other to form complete lines. Each time a line is formed, it disappears and you are awarded a number of points. The blocks above it fall down to fill the space. Gameplay continues until the pile of blocks reaches the top of the playing area. This ends the game in some versions of Tetris, in others it merely results in the playing area being cleared and you lose a life.

Is Tetris II Strikes Back is "just" another Tetris clone? Well yes and no... Yes, it does include a faithful recreation of the original

BUT also offers an alternative type of game which has a strategic element built-in along with a number of extras, making it more of a challenge than the original ever was. Tetris II Strikes Back (sorry about the long-winded name, Beast Software chose it, not us!) is in fact several game styles built into a single easy to use interface. The games on offer are Tetris Normal (the original game) and Tetris II, the modern day version. In Tetris II, each level sets you a challenge (for example you must destroy three lines at once, destroy two lines four times and destroy five single lines) and you must complete this challenge to progress to the next. The given tasks vary and get tougher with each new level. In addition, most levels already have blocks placed in the playing area and these must be destroyed fast to avoid a rapid decline in your chances of survival. Some can be eliminated in the usual manner, others need to be bombed, certain blocks are simply indestructable!
In addition to chosing Tetris Normal or Tetris II, you can select which game Type you wish to play. There are two types on offer. The first is as described above and the second (available in both Tetris Normal and Tetris II) furnishes your armoury with four bombs. These can be guided like missiles and used to target "problem areas". These are not atomic devices (they destroy the targetted area only, not the entire playing field), so use them wisely. Extra bombs can be earned by destroying three lines in a single operation.
Control is by keyboard or joystick. When in two player mode, you both play simultaneously on opposite sides of an enlarged playing area. Other features include passwords for every level (allowing you to recommence play from the last level achieved), excellent music (a compilation of old pop tunes) for ST/STe owners and user definable keyboard control. When running from floppy, no further disk accesses are made after the game has loaded (except for saving the highscore table. The game is hard drive installable.

Tetris II Strikes Back runs on any ST or STe with at least 1Mb of memory and includes a printed manual. A TT/Falcon compatible version is also available. Please state which version is required when ordering. Tetris II Strikes Back is available now for just eight pounds + P&P (UK one pound, Europe two pounds, ROW three pounds). Payment can be made by credit card (Visa, Access, Mastercard, Eurocard accepted) or UK cheque/PO. Overseas customers not paying by credit card should make payment in UK pounds sterling using a cheque drawn on a UK bank, International Money Order, Post Giro, American Express Money Order or Canadian Postal Order.

Hey gang...

I've been trying to get into the CNAM mirror site ftp.gui.uva.es, and I'm having some problems. Logging on is a snap, but when I cd pub/atari, it just tells me there is no directory. Any ideas? (it even tells you in the banner when you logon that its /pub/atari) I tried several different combinations after doing a "dir"... Thanks much! :)

It's common for this user. I have always assumed that it was a CAB bug.
It never occurred to me that it might be the overlay. I do notice that
when it happens the entire site sends 69 byte messages instead of
whatever should be coming.

: Hello. I have a 1040STe with TOS 1.6. I was wondering if there is
: any way I could use CPX XCONTROL panel files. I've heard the new
: control panel is for TOS 2.06 and up.

You can run CPX's on any version of TOS. Early versions of TOS had some limit in the way the Control Panel could be reconfigured between boots, but that was the only limitation IIRC. Save yourself a bunch of bother and stick with your installed TOS rather than messing with illegal TOS images.

To run a CPX, you must have a copy of the eXtandable control panel running as an accessory. You should be able to find this at all the same ftp sites that you are downloading your CPX's from. Then click on the Control Panel in the left most menu at any time and you will see the CPX's you have currently loaded. You can load new ones, etc. by following the directions that come with the control panel.

A new version of CAB OVL (1.25) has been released. The archive contains two versions:

1) One for 6800 based machines

2) One for 68030 based machines

This release seems to have solved a lot of the connect problems that have plagued the release after 1.18. Additionally the docs mention STiK version 1.13 - so a new version of STiK may be arround the corner:)

The new file can be found at http://www.flinny.demon.co.uk

R > You could be correct, though I'm unable to find my ICD manual
R > at the moment, though I was looking around like crazy before I
R > replied. Anyone out there with the manual handy?

My ICD AdSCSI manual (page 26) says that TOS will only boot from GEM
partitions (<32Mb), not from BGM (>32Mb).

I can verify that ahdi will boot from >32Mb - my other TT came with
a 170Mb Connor partitioned as one 170Mb C drive and ahdi - it booted
fine.

I like a small C drive myself, so this limitation (<32Mb) doesn't
bother me.

Yes, you can connect an RGB monitor or a TV with a SCART connector. If you have a lot of money you could connect a multisynch monitor which can display all video modes. The ST also supplies composite video if you can find a display which will take it.

Colour modes are only LOW and MEDIUM resolution so, if you have HIGH-ONLY software you will not be able to run. There is a way round, using a mono-emulator program in AUTO, but you will not be happy with the re

Tom Derrick (tom.derrick@acpu.com) wrote:

: My ICD AdSCSI manual (page 26) says that TOS will only boot from GEM
: partitions (<32Mb), not from BGM (>32Mb).

Yep. I just now found it, after going through the entire room again. To quote from the manual:

SIZE allows you to edit the size of each partition. If you plan to boot from this hard drive, the first partition must not exceed 16.77 megs, or 32768 sectors. With TOS 1.4 or above, this limit is doubled. This is the limit for GEM partitions. BGM partitions, described below, may be up to 16 times as large. For alternate operating systems you should consult their manuals for recommended partition sizes.

For the BGM description on the next page:

BGM partitions use large "logical" sectors to extend partition sizes. The first enabled partition on the drive must be GEM if you wish to boot from this drive.

That answers our questions for the AdSCSI adaptors, as well as the AdSCSI Plus and others. The GEM partitions average 512 bytes per sector. 16 times that 32768 sectors is 524288 sectors. Figure that out. Someone mentioned about 512 megs per partition, as that's what you can get with TOS 1.4 and higher, if I'm figuring right, since my little calculator watch only does 8 positions.

: I can verify that ahdi will boot from >32Mb - my other TT came with
: a 170Mb Connor partitioned as one 170Mb C drive and ahdi - it booted
: fine.

AHDI and HD Driver both have their own limitations. Now, what host adaptors do they use? But of course, AHDI's from Atari, so it has its own adaptor. How about its limitations, as well as HD Driver and its adaptors, if one comes with it? How about the Link and Link II?

: I like a small C drive myself, so this limitation (<32Mb) doesn't
: bother me.

To each their own. Some like huge partitions. The other day, I put a hard drive in my system, and found the previous person had formatted it to the full size of 1.3 gigs. I once had a number of partitions, up to N or O, connected with my BBS, til I pared it down, for a bit more memory.

The only problem is the cluster/sector sizes. This one had a 32K cluster size. I'd like to use all the space on the drive without having to resort to big cluster sizes. How's this possible with ICD, AHDI, and HD Driver?

>the OVL's fault, though.
><< Neil >>

Hi Neil,

Well, I hope your right. However, the OVL's seem suspect because they have such different results at different Web sites. Testing using Trial and Error is a tough task as you know. With 2 CAB's, 4 OVL's, STiK v1.12/GlueStick, and many different Web Sites takes a lot of time, unless of course, you have ten computers with several different ISP's all running simultaneously! Oh yeah, don't forget to check out all the source code of each problem web page... What? You say your running a TT, Falcon, ST with 10 different TOS/MagiC/MiNT? Piece of Cake...

Recently, for example, DejaNews changed some of there coding which causes the "Power Search" feature problems for the New CAB v2.0a. "View Thread" doesn't work and the loading of the "Next 100 messages" doesn't load ;) It works fine with CAB v1.5 (Any OVL). For those interested I use the default settings except for changing to 100, Date, Great. There's other stuff going on here, but that's another "dance".

I hope this bug is a simple one, but I'm not holding my breath. After all,
I may end up buying someone/two a Steak dinner.

Charles

P.S. If STiK is the problem, then TermiteTCP/IP should solve it. Maybe?

1782. question about ftp

Newsgroup: comp.sys.atari.st

I have a question. I guess it doesn't pertain strictly to Atari STs, but I use a local FreeNet to use the internet (text only). I have a command based ftp. How do I show a file to screen while logged on to a server? I know how to ls (for a dir.) and get (download file) and ? (or ? command) to get help. I haven't found a command that will allow me to type files to screen. I end up having to download them first, then view them in STeno - even if they're simple readme files.

Thanks.
Rick.

1783. N.AES/MiNTNet meshing help needed

For those of you who have succeeded at integrating N.AES and MiNTNet/GlueSTiK, would it be possible to email me the appropriate .CNF files for me to modify so that I can use N.AES and GlueSTiK together. Also, has anyone compiled MiNT to take advantage of higher speeds than 19,200 baud, and if so, is it on-line anywhere?

I'm using a Falcon030 with a 33.6/56k modem, so the N.AES .CNF files I need would be suitable for this computer.

Hello All!

Does anyone remember the ST soundchip music package 'Music Mon'.. I
had a demo of it on an old ST Format Cover disk, and I was wondering whether
it is still a commercial package... I **THINK** I saw a post about it, but I
was logging off th enews reader at the time, and by the time I checked again
it had gone :(

If anyone knows anything about this groovy little program, (which
also runs in ST HIGH! AND it has digi drums!)then i'll be glad to know!

Thanks,

Brian.

Rod McDonald (stinformer@chatlink.com) wrote:
: operate in RAM on a AT, XT or 286 machine. Because GEM programs had to be
: written in assembly to provide a small profile in RAM, programmers were
: not too enthusiastic. With this limitation and the then current PC
: configuration, GEM could not compete with DOS, which as you know, was much
: smaller and allowed programs to be written in LESS CONCISE programming
: languages, providing a larger platform of programmers. Besides, the CPM
: roots of DOS made seque programmers from the Osborne CPM system gain more
: credence in the DOS market. Early difficulties in creating GEM resource
: files also aided in the difficulty perceived by GEM. There is still a PC
: GEM available that can be loaded from DOS. There are some efficient GEM
: program also still available in the PC market.

One "technical" problem of PC GEM was of course the fact, that it did not provide the means to adress more than 640K of RAM. Tjis is the one and only important reason why Windows 3 was such a sucess - not because of its graphics interface.

The proble why GEm did not have success was Apple. GEm used a shell, the DESKTOP, which operated similarily as the Macintosh Finder. Apple's lawyer's went to court, the resulting output being that DR was forced to amputate their DESKTOP, by limiting the number of windows to two and not being able to resize them in any respect.
From that time on, GEM was doomed to fail, as any important improvement of the user interface was a sure target by Apple, so DR lost interst in GEM. The updates concerend mainly the graphics library VDI, which was used by programs such as VENTURA PUBLISHER and ARTLINE to a great extent and provided in the 80s already bezier curves etc, that could be founf the first time only in Windows 3. By the time, Win/3 appeared, things were over for GEM.
GEm was in all ways superior to any of its competitors, including MacOS. It was the sole OS, that could be ported easily to any other platform (plans were there not only for Ataris, but also for OS/2 and UNIX machines), it was programmes very efficiently and was already concepted for multitasking etc., i.e., upgrades of any type are/were very easily possible. I do not know aboz FlexOS; but the Atari version (the last from 1993) supported preemptive multitasking with memory protection and a lot of more features (e.g. loadable file systems) and had features (has features) Apple surely would have liked to be able to implement in their OS now. Still, the GEM/Atari OS, while having these features, is smaller (needs only 2 Mb RAM, 1 MB harddrive space), easier to configure than any other OS and still as userfriendly as MacOS.
In a sense, Apple prevented the computerindustry from leaping ahead and is thus responsible for most OS problems with Windows noeadays.

: > looked like a joke compared to GEM.

Not just looks..but function, compactness, power wise...GEM was way
superior in that it was not built to work on top of DOS. It did not
have the 512k barrier, and the whole of the OS could be loaded into less
than 500k of RAM, and the nature of the OS allowed code to be very small
and tight. A good example of what I mean, is that Windows might call upon
five or six files on your hard disk to open and draw a window...where
the GEM AES has it all in memory already, wham bam, it's there! If you've
ever seen an Atari ST in action, you'll be amazed at how quickly an 8mhz
M68000 can update the screen, and manage memory under the GEM AES. Be
advised however, that GEM alone, isn't a total OS. It is possible to plug
it into a number of OSes...such as BSD Unix, or even DOS! GEM is an AES.
In the case of the Atari...GEM works hand in hand with an atari hardware
specific OS called TOS.

: > Anybody know why GEM failed? Or know anything about GEM. He said one
: > problem was they had their own GEM word processor, spreadsheet, ect.
: >

"My understanding" is that Digital Research was under pressure via leagle
threat from various software patent holders to "CRIPPLE" the PC versions
of GEM. If you've ever seen GEM run on a PC, and compared it to that of
an Atari ST, you'll see what I mean! The desk top more or less got the
CAN, and some other features like resizeable windows were crippled in the
commercial relase to avoid possible law suit. The trash-can, and some
other "Icon" related ideas were also under serious fire by Mac and Windows
people. I guess Atari and the Tremils somehow fell under a protection
clause, or maybe they just didn't care and called the bluff by releaseing
full blown GEM anyway?

GEM was heavily used by Zerox software for a while there. The Ventura
publishing package made some of it's most impressive runs under the GEM
AES. They had a version of Ventura back in the mid 80s that was fully
point and click on a PC! It ran amazingly quickly and smoothly on an 8088
chip set!

I think I made the last and maybe only posting re Music Mon,

> If anyone knows anything about this groovy little program, (which
>also runs in ST HIGH! AND it has digi drums!)then i'll be glad to know!

As I say..I made the posting as I have a couple of tunes, and these worked perfect for a game I have just released "BILLY BOY" because unlike Chip music, Music Mon allowed me to control the volume, This was very important as it had to mix with SAMpled sound effects, and the highest Volume of the STE sample replayers still get drowned by chip music, so I really needed a volume controlled tune,

After asking in here, and NeST BBS systems, it would seem either no one around has heard of it? or they simply havent got a ny tunes,

So I can't help bar to say that the last posting was mine.. ho and the music definatly Kill's a falcon stone dead.....
hehehe So More than one use for it!...heheh....Sorry!...

The 'video out' on the monitor master is an unmodulated
video signal. It is available even if your ST does
not have a RF modulator. You can connect it to the
video in of a VCR, of a TV (if it has one)

Open the document you want to "convert" (it probably has a .DOC extension). Go to the drop-down menu under the "Edit" column and turn off "WP mode". Now save the document with an extension of .TXT

A message will come up telling you that the document will be saved without any formatting, etc. (in other word, in ASCII format), which is exactly what you want.

You will have to do this individually for every document.

Hope this helps,

Randy Kwak

: John Skruch, following complains by several others about the way
: he treated me... Seems TOS is not dead at all! It's being bought
: by some unknown source...

No doubt he's referring to the ongoing negotiations with Wizztronics. They've been talking about licensing TOS since long before C-Lab actually _did_ license it. Wizztronics' reputation in this community for vaporware and production delays is probably even worse at this point than Atari's ever was. They'll have to make a wholesale turnaround before most people who've been reading this group for long will get too excited, IMO.

Of course, if they ever actually release anything, I'm sure people will snap it up. Once they get a product to production, like the Falcon memory expander board they make, everything is fine.

>Perhaps someone from the new STiK team can comment? I don't think it's
>the OVL's fault, though.

Actually, the way CAB.OVL interracts with CAB is still one of the
mysteries in life... so much that Dan Ackerman is devoting every
second of his spare time exclusively to it, while Martin Mitchel
and Michael White handle FreeSTiK 2.00 (ie: the much awaited PPP
capable STiK) on their side.

Well, I hope your right. However, the OVL's seem suspect because they have
such different results at different Web sites. Testing using Trial and Error
is a tough task as you know. With 2 CAB's, 4 OVL's, STiK v1.12/GlueStick, and
What? You say your running a TT, Falcon, ST with 10 different TOS/MagiC/MiNT?
Piece of Cake...

Yep. So darn easy it takes about 20 of us STiK testers to
foolproof each and every client or new STiK/OVL release...

Recently, for example, DejaNews changed some of there coding which causes
the "Power Search" feature problems for the New CAB v2.0a. "View Thread"
doesn't work and the loading of the "Next 100 messages" doesn't load ;)
It works fine with CAB v1.5 (Any OVL). For those interested I use the
default settings except for changing to 100, Date, Great. There's other
stuff going on here, but that's another "dance".

I'll say this now, even though there already IS a commercial
release available, CAB 2.0 is still far from perfect, though
recent betas seem to indicate more bugs are being cornered,
as each testing reports reaches Alexander Clauss' mailbox.

I hope this bug is a simple one, but I'm not holding my breath. After all,
I may end up buying someone/two a Steak dinner.

Hehe, sooner than you might think! ;-)

Nevertheless, I must say that Netscape also has troubles with
several sites, which means it has to resort to various error
correction protocols. It's also the experience of several STiK
testers who design web pages, that several PC photo-retouching
softwares produce buggy JPEGs that even GEMview won't load.

MiNT supports up to 38400 on the Falcon.

> I'm using a Falcon030 with a 33.6/56k modem, so the N.AES .CNF files I
> need would be suitable for this computer.

There's nothing in N_AES.CNF that GlueSTiK cares about, you just need to
get MiNTnet up and running, and then run GlueSTiK. You'll also need a
valid DEFAULT.CFG (Or was it .CNF?) in your STiK-folder.

The problem is the CAB.OVL for STiK. I use the MiNTnet-overlay which works
quite well although it has a couple of bugs (Chokes on desimal-dotted
IP-addresses...). Somebody said that CAB.OVL 1.25 works with GlueSTiK
0.02b4, but I wouldn't bet on that.

From: Colin Polonowski <polonowski@zetnet.co.uk>
Message-ID: <01bc5660$bad98d00$LocalHost@zetnet.co.uk>
Source record: 123000

Hi Everyone...

Here's yet another plea for your help!

For the birthday issue of the Atari Times I am planning an article which will cover the entire last year in the Atari Scene.

What I want is only a couple of paragraphs on what you think were the ups and downs in the Atari market in the last year. This can cover all Atari platforms so there's no need for anyone to feel left out.

All contributions will be collated to create the full article...

As I'm also planning to make this the biggest and best issue ever then I really need your help on all the other areas.

I want reviews and previews (with screenshots if possible), features and news. If you have any suggestions then I'll also be very happy to hear from you.

Please contact me with any contributions via email.

Finally, if you haven't visited the Croft Soft web pages for a while then please come and visit! There has be a large number of changes over the last month including THREE new guestbooks!

Not all the pages are Atari related, but I'd appreciate responses on all the pages...

If you do visit then please take the time to fill the books in :)

Hang on! I have only just become aware of Pacifist and haven't had chance to try it out!

In principle it sounds very useful but I can only set it up at work (!) as I don't have 386+ PC (I have a DOS WIN 3 palmtop.. and an ST!). I thought it would be useful to run POPwatch on it to monitor the company's mailbox (Illegally for my noseyness!).

No doubt I'll have many Questions!!

>>

Totally! Atari practically discontinued the Falcon the minute it was released. I remember calling them one time for tech support on my mega-4 and she said "Wait a minute, let me go
find "HIM". Yeah, HIM. 1 guy! Hahahaah - Their phone systems said "Jaguar blah blah blah , and the new Atari Falcon blah blah blah. 1 tech support guy for an entire product line. He probably invented and designed the unit knowing Atari. I called up to order Lynx carts one time direct from Atari and I asked the guy if they still used ST's around there. He laughed at me and told me the place in entirely PCs. I asked him if there were any ST's laying around or 2600 stuff, again laughed at me. We think we are going to walk into Atari and see all this cool stuff that we are into, but all we would really see if a bunch of Jaguar crap. Everything they make is cool (cept Jag) and marketed terrible. It's sad but true.

Atari died many many many years ago, it's obvious! It's like they just didn't care anymore. They knew they didnt have the money to market a solid product and let's face it, the jag when it was releases wasn't nationwide because atari didnt have the money to do all at once? Hello?

Copy it to a disk image rather than using a mounted directory.

> And my source code of UVK suddenly gives a
>"sprite string length wrong" error when in fact there is not a single sprite to

Maybe UVK is poorly programmed ;)

Almost all problems with GEM progs seem to result from the
less-than-perfect hard drive emulation; I've found copying stuff
to disk images (which aren't limited to the size of a normal
floppy!) solves these problems. There is some limit to the size
of the image though; people have had problems with 20Mb images
for instance. 4Mb or so works fine though.

Is it possible to restore a disk image onto a floppy for use on a ST
(or TT, in my case)? I tried a utility I've got called "rawwrite"
which was with the Atari NetBSD distribution, but that didn't work.

Are their utilities for this? I didn't see anything at wuarchive.

You are misinformed.

TOS can boot from a BGM partition; I use AHDI with a 256 Mbyte partition &
it boots fine.

It is listed as a 'BGM' type under various disk tools.

I need & can't find a copy of
Gluestik V 0.02b1. I've got the b4 and it seems a little slicker but
does not seem to work with the oldest cab.ovl (file size 26,499 bytes).

This .ovl seems to be the only one that allows direct offline browsing
of the cache and even when online reads from the cache first which
obviously speeds things up enormously... i'd go as far as to say that
cab (at least with my ISP) is unusable without this facility:)

Any thoughts?
ta ta for now!

I have not seen any information on Mark Williams Company.... I have MWC 1.72 and 3.05 and 3.09. I would like to know the current status of the compilers and/or its sources. In its day it was a clear runner for a K&R ansi compliant C. (ignoring its other faults) it was the best compiler I had until Lattice took up the flame. (GCC has NEVER worked on my poor 1040st with/or with/out Mint or simple ports.). What I would like is to fix and upgrade the compiler... (many old Unix program compile exactly with it.).... My system is a 4meg st with two 105p quantums. (uh.. maxed out).

Anyway I want to know the legal status of Mark Williams software.

It's CFG. Yes indeed some programs needs the default.cfg in order
to work with Gluestik

>
>The problem is the CAB.OVL for STiK. I use the MiNTnet-overlay which works
>quite well although it has a couple of bugs (Chokes on desimal-dotted
>IP-addresses...). Somebody said that CAB.OVL 1.25 works with GlueSTiK
>0.02b4, but I wouldn't bet on that.

I've used the MiNTnet-overlay for a quite long time but since I use
the STiK-overlay surfing the Net goes much better. There are indeed
lots of trouble with the MiNTnet-overlay. Numeric IP-addresss
doesn't work at all. Quite a lot of pages weren't accessible with
the graphics on (e.g. homepage of ASH)
With the cab.ovl v1.18 and the latest gluestik there are still some
troubles but not so big as with the MiNTnet-overlay.
Furthermore using gluestik means that one can drop Oasis 1.35 as
there exist some really good mailprogies such as NEWsie 0.74 and
Antmail.
With my setup cab.ovl v1.25 doesn't work with gluestik 0.02b4 and
CAB 2 demo at all. However with CAB v1.5, cab.ovl v1.25 seems to
work. The only cab.ovl that works with both CAB versions is v1.18
(at least with my setup).

Try checking for termination on the SCSI cable/back of box. Try
setting the Drive ID to 0, 1 or whatever it is supposed to be.
It hasen't found the SCSI interface yet, maybe because it is not
terminated properly (did you have more than one HD?) ICD had utilities
which would scan for drives, if it can't find yours, something
doesn't work right. Maybe your cable needs to be cleaned? An eraser
brightens up old contacts.

Just tested those site's, and they will not show up correcly here.

At the http://www.qvg.com there was no graphic at all.
The same goes for http://www.slater.com.

At the http://www.pcquote.com I got the page as text only.

The http://www.gaelic.com came up with some ugly color and was hard to read at all.

Only http://www.switchboard.com was showing the hole page correctly, even if it
was a long time to do so.

Hi!

To save the document in ASCII untag one of the options in the EDIT
or FILE menu. The option is something like "wordprocessor" or "document"
(sorry, I can't remember by sure, but this is the way to go...). After
that SAVE the doc in a MS-DOS formatted 2D disk.

Exactly!
I would love to be able to save all that wasted hard drive space by
having
512 clusters, like OS/2 for example. :^(
I try to keep all my partition below 256MB as a consequence of this
but I suspect that drastic changes to the low level operating system
would be needed to do this for GEM/TOS.
I think Linux can use 512 clusters, non?

Exactly. I was the problem ! The partitionning programs give by default 4
partitions, I you want one only you must reduce the 3 others to size 0 then
increase the size of the first one. I was just increasing the size of the
first one, assuming that the other three would reduce.
So no problemo ! Thanks for pointing out that there was a problem though,
otherwise I would still be stuck with 4 partitons !
Steph

How comes ? It is true also that Bigdos 8 has crashed my CBHD, so I gave
up. Is it a common problem ?

> tells me there is no directory. Any ideas? (it even tells you in the banner
> when you logon that its /pub/atari) I tried several different combinations
> after doing a "dir"... Thanks much! :)

Very simple : the ftp.cnam.fr has been closed, due to an arbitrary
decision from Sun Microsystems (who is the owner of the machine which
served the
ftp.cnam.fr) to take the server machine back. There's no more Atari
directory at the ftp.cnam.fr, and the ftp.gui.uva.es mirrored... an
empty directory ! :(

cure@cnam.fr and some other guys are looking for a new host machine to
put a mirror of the CNAM on it...

The Untramielled Adventures Home Page is now up and staggering. It contains 3 Role-Playing Games that might appeal to those who still have nostalgia for the old Bard's Tale I, and an editor for similar games. For those who remember ST Format, they gave 'Anoraks of Doom', the first part of the trilogy, 83% just before they closed down - these two facts are unconnected (would I lie to you?) The URL is http://indigo.ie/~odonnllb

Well I solved my SAM problems by deleting all those samples that were
giving
me that problem, and reinstalling SAM, 1.2 and 1.3. _One_ of the

problems
may have been that I was previously using DataDiet, and some samples
were
still 'squished' so I uncompressed them and some of them worked fine.

However, I can now report a problem betwen SAM 1.3 or SAM 1.2 and
EdithPro 1.220P. I've just started using SAM again, that's why I think
I never noticed this before.
Does anyone have a problem with Edith two bombing out when SAM is loaded
in
the auto folder?

When Edith is used an accessory or a program it gives me two bombs when
I
try to open a file from the file selector. When I try to open Edith via
Chameleon, it gives me two bombs as soon as the file selector opens, and
freezes the machine, neccessitating a reboot.
I've changed the position of SAM in the auto folder, from first to last
and
in between with no success. I disabled every acc and auto folder program
and reinstalled one by one, and the *only* problem was with SAM.
I've reinstalled SAM and reinstalled Edith with no success.

Does anyone use both Edith and SAM at the same time?

I am sure there will be many opinions, but IMHO, it depends totally on your daughter's level of interest, development and attention span. I personally would try GFA Basic, get her comfortable with the PRINT statement and then move on to INPUT.

With those two commands and a simple understanding of variables she can write programs which amuse herself. If she can't grasp those concepts in one or two short sessions, I would try the turtle graphics.

If she grasps the PRINT and INPUT quickly, I'd move on to being able to output text to different parts of the screen. At that age, I certainly wouldn't do anything complicated, just get her familiarized and see how easy or difficult it is for her.

Then I would move on to simple line, circle and box commands, later exploring different colours. You will know by then, what your daughter's aptitude for programming is.

I would start with GFA (or STOS - it's easier yet), because GFA is a professional language and it is a very easy jump from GFA to C. Also, you can do some neat stuff with GFA, using very few, simple commands. From my recollection of turtle graphics, it would be a much wider chasm to cross.

Like I said, this is only my opinion, one way, so to speak. I am sure more experienced programmers than I would have different ideas.

Unfortunately "The_Biz" is no longer supported, AFAIK, and part of the trouble with the demo is that the invoice, receipt, etc. generation (as well as all printing) is disabled. "The_Biz" appeared on an ST Format cover disc, but quickly sank from view thereafter.

A NEC 3D with the Multisync Gizmo works well too. I've also been looking at
the Amitech series of 14" and 17" monitors that work well with Amiga A1200s
so they should work well with the Falcon too! :)

Neil,

I see the same problem regardless of which operating system I am using - TOS or MagiC. According to Alexander it is a problem with STiK. I will say the CAB_OVL 1.25 is much more stable than 1.21. I had to go back to 1.18 as 1.21 just caused to many problems.

Out of the ether, the following was mentioned by ps10600@cedarnet.org...:

>> Ok, it helps generate more revenue but its side effects are far
>> more wide reaching.
p> What makes you think that Apple will increase the charges? What
p> you may have heard is the clone firms bellyaching that there might
p> be a increase in price when Mac OS8 ships, but not the outrageous
p> figures that have been reported as rumor..
Well it was in one of the industry news papers we get over here, PCWeek.

It stated that IBM, Motorola and one other vendor (I don't think it was
PowerComputing but rather the people who tool over Radius's clone license)
were up in arms about Apple's proposed increase in its
Macintosh architecture licensing.

The article also mentioned that the licensing fee was to go up to 500 dollars
(or was it pounds?) to help Apple recoup some of its lost income from the
cloners who have cut into Apple's profits big time.

Also mentioned was that the PowerBook range is Apple's only profitable line
out of those available and this is most likely due to a lack of competition
in that field.

Apple made a big thing about opening up the market to more competition
but it seems that such intentions are all so much hot air.

This is one reason why so many large firms are going off of the
Macintosh because of the limited number of vendors and therefore
competition.

The PC sucks but at least its market is more open and sells better.

First it was RIP Atari and now it looks like Apple are well on the same
slippery slope.

It pains me to even /think/ about doing it that way!

IIRC, First Word saves as ascii by a menu entry 'edit mode'. I think FW+ does the same.

Or one could download Marcel, import the First Word Plus documents into it, and save them back out as Marcel's native format (supposed to be RTF). RTF is the format used by both WP and M$Word (I am told), but there may be incompatibilities. All you can do is give it a try. Even if the format is not perfect, this approach may save some editing time.

Well, I would venture to guess that the mirroring systems that they use were not halted. If I were to mirror everything in an empty directory, I'd probably get an empty directory (if I were going for an exact copy, and not just new and changed files). There were a few messages on fr.comp.sys.atari about another mirror site, ftp.utbm.fr/pub/atari and /.pub2/atari, both of which are now empty, except for a few tumbleweeds and some wind and sand.

Pity, too. After I found out that gui.uva.es was down, and having just discovered the utbm mirror, I was rather hoping to stock up on all the ST+ diskmags...

Maybe either site will realize what has happened and restore the directories in question. Of course, it won't do any good if it is still mirrored by next week or month or whatever.

Has anyone ventured to drop a note to either site's sysadmins to "let them know" in a *kindly* manner? As they are gods and subject to their own whims, I hesitate to write for fear of flooding, as Atari users get more and more peeved by watching a hundred megs of software vanish into the electronic ether. The point is, maybe someone with a gift for coersion should write to both sites, as I don't believe there are any mirrors of cnam left, and it was a beautiful archive.

Life. Go figure.

Joe Widows (jwidows@rsn.hp.com) wrote:

: I have not seen any information on Mark Williams Company.... I have MWC
: 1.72 and 3.05 and 3.09. I would like to know the current status of the
: compilers and/or its sources. In its day it was a clear runner for a
: K&R ansi compliant C. (ignoring its other faults) it was the best
: compiler I had until Lattice took up the flame. (GCC has NEVER worked
: on my poor 1040st with/or with/out Mint or simple ports.). What I
: would like is to fix and upgrade the compiler... (many old Unix program
: compile exactly with it.).... My system is a 4meg st with two 105p
: quantums. (uh.. maxed out).

Mark Williams Company went out of business in February of 95, if I'm remembering the year right. I was talking with one of the former people, the sysadmin, of MWC, Joe Dennison, awhile ago. The actual owner of the sources and so on is Robert Schwatz, if I've gotten his last name spelled right. There's the newsgroup comp.sys.coherent, I believe that's the full newsgroup name, that has some of the former employees. Coherent was a part of MWC, and was also the name of a Unix-like operating system. I've seen the packaging and the software, but never had the opportunity to run it at all.

If you do a whois on mwc.com, you will find the address of John Dennison, and also find that the domain name is on hold. I don't even think the address is correct. Another fellow and I tried calling the 800 number mentioned in the manuals, and we got a very rude person on the other end. Since I'm deaf, I used my state's (Kentucky) TTY relay service to make the call for me. When I requested the operator to call the number, the op did a little explaining of the relay, which is standard practice, and the guy goes right at the op, saying he doesn't have time for questions or whatever. The other fellow, a hearing person, has a bit more luck, but doesn't even begin to understand what the guy says when he first answers the phone, and has some sort of weird southern accent or something.

As for Robert Schwatz, even I've not been able to find him. I've tried a number of other things, but with no luck. Maybe someone else can find him, or is this one of the best-kept secrets of MWC?

: Anyway I want to know the legal status of Mark Williams software.

As for the legal status, everything is owned by Schwatz. It's not easy finding a copy of MWC, whether it be version 3.06 or 3.09, with the manuals and so on. I located my copy out in the MiST fest in Indianapolis last summer. Watch for people selling stuff, and you may see MWC being sold. In the last year, I've seen several copies total, and there's other packages that are quite common.

I have other things to do.
I try to help out as best I can, though.

>>for you. Maybe you can use some of that GEM-DEU code you have done.
>>Doesn't it already have a 'test' mode of some sort? Just loading

If you mean MGIF, it does indeed time all its operations. IIRC, you only
need to supply the -dbg flag to get the results (among lots of other
debugging info) written to the standard output.

>>a GIF image wouldn't be to bad either and then applicate a bumpmap
>>filter on the image. :-)

The timings for the GIF loading are even split into load and decode phases,
so you'll get the harddrive tested as well. ;-)

That bumpmap filter is hardly very general processing. It spends most of
its time multiplying numbers and calculating integer square roots.
It also has the complication of being based on GPLed code, which means that
anything that uses it will also be covered by the GPL.

(The GNU General Public License requires that full sources are available
if asked for. This has always been the case with MGIF, but most people
seem to prefer to keep their sources to themselves, unfortunately.)

>I guess you mean MGIF? I dont think Johan has put his GIF decoding
>or image processing into GEM-DEU... :-)

No, but at least a GIF loader would be useful to replace textures.

>BTW Johan, did you ever finish that multi-mode line drawing code

It was finished (apart from the VDI support) before my machine died.
I'll still have to put that VDI stuff in there, though.

>for GEM-DEU? As there is some activity, maybe I should include
>it?

You mean you've got your harddrives to work again?
(Or am I confusing you with someone else?)

Well I use Magic 5 on a TT and I can't even get CAB 1.5 (030) or 2.0 to boot with this .ovl in the folder. Why might this be? Every other version of the ovl worked fine for me (including 1.18 and 1.20h) with all previous versions of CAB.

>Is it possible to restore a disk image onto a floppy for use on a ST

>Are their utilities for this? I didn't see anything at wuarchive.

<smile> Easier than people imagine .....

From your disk image you have all the same optioms as a normal drive
A or B...
So in your GEM window simply copy using drag and drop your files from
the disk image to your Mounted drive,

Or to be real no fuss, set your mounted drive as A:\ then on the GEM
desktop drag your files from A:\ (IMAGE) to C:\ (Mounted as drive A:\
and your files will copy from the image to the drive in A:\

BTW the drive in A:\ Can be a 720k or a full 1.44 PC Disk ,

This works both ways... you can drag stuff from a floppy, or your PC
hard drive into an image, the image is always 720k, so not limited to
the size of whatever software was originally on?

HTH :)

Unfortunatly about one week after uploading 15 issues of ST+ to cnam,
it went down... Is that Luck or wot?
The mirror had them....but as you say...thats dissapeared,

I have tried uploading to ftp.funet.fi but BILLYBOY the game I
released a couple of weeks ago, and ST+ 15 have still not appeared
although succesfully uploaded and emailed funet?

Other ftp sites simply dont allow uploads into the ATARI directory:(

After uploading 8+ meg of diskzines only to have them dissapear days
later:(its not encouraging to keep doing it at UK phone prices,

If anyone has any suggestions as to how I get all these back issues
onto the net?....thats of course after I have them all posted to me
again?

Personally I have been keeping my fingers crossed that cnam will re
appear, but this is looking less likely :(

I Think I understand what you have in mind now. Sort of a sound card
emulator?

->No I want a program like a trackerplayer, but for midi songs with
->sounds. Something like a GM sound module inside the computer.

I think getting the samples triggered via MIDI shouldn't be too hard. They could be all loaded from the HD as the prog starts. My Proteus 1 sound module (cutting edge 1989 technology) has 4megs of 16-bit sound and does a pretty good job with GM midifiles. So this might be a 14meg Falcon prog. Or with a cut down 2meg 8-bit sound set it would work on a 4meg STe.

Of course this would never work without looping the samples in a useful way. I have no idea how to program that. Then there is the issue of polyphony. And note stealing too.

I certainly would want to be asked if someone wanted to use an image
from my site. You would not extend your attitude to include programs,
would you? The name for that is piracy.

I realize that many feel it is ok to use images that are used on web
pages. That, however, does not make it right (or even legal...)

I had that problem at first. At that time I was experimenting with the
outside demo while waiting for my ram expansion to arrive. As soon as I
quit using outside the problem went away. My guess is it does something
funny with addressing.

The error shown for both CAB 2.0 and CAB 1.5 was 163 which appears to
be either out of memory or invalid address.

Pacifist seems to be running nice and bright, but when the emulator is running, the speakers buzz loudly, masking any sound the program may output. Is this a common symptom? Also, joystick control is iffy at best - also part of the turf with this version (43)? I'm using a p166, ensoniq sound, matrox millenium video. TOS 1.0. I ran Cyberpaint - really neat.

Arrrggggh!! I'm getting the PC Speed off Derryck now found out a neat trick
that can be done with them...

That PC emulator you have was made by Vortex and I take it is a 80386SX. It
was sold by Analogic Computers in the UK and if they still exist this is
their address

Analogic Computers
Unit 6
Ashway Centre
Elm Crescent
Kingston-on-Thames
KT2 6HH

Or you can phone them on 0181-546-9575.

The emulator you have if its the one I think it is works at 16Mhz and is very capable of running DOS and Windows on top of that.

Cya!

Upon looking, I saw a great many versions of UniTerm listed. To see them, simply go to http://www.filez.com and set all of the necessary requirements to get the list. www.filez.com is a very good file search engine, and this will help you find a file if it's out there. The version that I saw the most of is uniterm20e011.lzh/uniterm20e.lzh (one place is ftp.gui.uva.es/.1/atari/Telecomm/) There are other sites, but I'm not going to list them all.

Any BASIC you can get your hands on will do, PRINT, INPUT and the
most important use of VARIABLES, will be a good starting ground for
any programming,
Understanding of variables will be needed for anything in the future,
I doubt very much that any of todays 8yr olds will be sat in front of
an ST in 10-15 yrs time?, but a grasp of variables will be useful for
any language, Including Multimedia Authoring packages (Already
becoming a part of the UK educational curriculum) and every
programming language on any machine,

>If she grasps the PRINT and INPUT quickly, I'd move on to being able to

Is it?.....that is an opinionated statement, not fact, Only someone
who is proficient in both is educated enough to make that statement, I
certainly can't, and that is why I know the above should be taken with
a pinch of salt <smile>

IF you do decide on a BASIC then I can say as "Fact" that you will
find more Support, Tutorials, Programming diskzines, Guides and even a
mailing list for STOS BASIC than any other BASIC for the ATARI, This
is an undisputable fact :)
STOS is also being upgraded and making advancements and is well
supported for future enhancements such as continual upgrading,

Please feel free to check out the STOS FAQ available on my web page
<smile>

Okay, I've gotten CAB2 last weekend and have it up and running -
looks good!

A tip to all those who are having problems getting CAB2 to load
graphics in the downloaded pages - if you're using your original cache
folder, delete its contents and then have CAB2 write the new folders and files when
it first boots up. This might also work with the CAB2 demo - try it out!

So far my impression of the new program is quite good - it's a lot
faster, and the ability to load frame-based pages is very welcome. Try
out http://www.vw.com for a test on what a frames page looks like.

On each site that I've tried which gives the 69 byte error the site is actually on the Microsoft Network. (even though the address itself may not indicate this) Perfect example being the GEMulator site.

Another problem I'm having with the new ovl file is that I can't access Alexander Clauss' homepage! It just displays the HTML source code instead :)

>1.20h) with all previous versions of CAB.

I have no idea why, Matt. No problems with my TT running under Geneva.
I haven't tried 1.25 with CAB 1.5 (030) yet. Sounds like there's a
conflict somewhere.

Steve Hammond wrote:

>I see the same problem regardless of which operating system I am

>had to go back to 1.18 as 1.21 just caused to many problems.

So it is STiK. That was my first guess, but I was hoping for miracles
in the new OVL. For me, the best is 1.18. 1.25 seems fine but is
slightly slower. Mind you, the difference is more than speed (better
forms sending, etc.).

Cliff Cook wrote:

Another site with this problem is www.atari.com. Now that's irony
. At one time it didn't have this problem (all the graphics came
in correctly).

Martin-Eric Racine wrote (in part):

>I'll say this now, even though there already IS a commercial release
>available, CAB 2.0 is still far from perfect, though recent betas seem

>reaches Alexander Clauss' mailbox.

CAB 2.0a will crash on HTML that has excessively long lines (like those
generated by some Dejanews documents). I know this because I took the
HTML document from the cache and resaved it with qed. The file ended up
to be exactly 7 bytes larger than the original. Using a file-compare
program, I found that 7 linefeeds were added to the lines that were too
long. It then loaded fine into CAB 2.0a. CAB 1.5 didn't mind the long

lines in the first place, though.

>Nevertheless, I must say that Netscape also has troubles with several
>sites, which means it has to resort to various error correction
>protocols. It's also the experience of several STiK testers who design
>web pages, that several PC photo-retouching softwares produce buggy
>JPEGs that even GEMview won't load.

I've run into a few of these so-called JPEGs. Loading them into
GrafTool will display the JPEG's creation software header in its log
window -- then choke on the compression table. As for Netscape, when I
first wrote my TOS page I used the
tag for aligning graphics
within tables. Netscape would only display part of the graphic in some
cases (parts were cut-off if a percentage was assigned to the table
width). MIE and CAB displayed them fine, though. I replaced
with
something better.

You should check out two little utilities: TWP27 and WP35 (the numbers
are version numbers and may be higher). These programs convert First
Word Plus docs into Wordperfect 5.1 docs.
You can find the programs on most ftp-sites.

C?!? Urk! I wouldn't suggest that just yet.

I started programming in 5th grade (however old I was then) on a TRS-80 in Basic. The trick would be to find a language with a good deal of example game programs she could look at while she plays. (Either that, or ideally you also sit down and write the most basic ones for her to start off looking at, as oddly enough most programmers I know couldn't be bothered reading but just look at some sample code and attempt to use it from there [I know I'm like that]) It doesn't really matter how simple they seem as the simple stuff will actually help her feel accomplished at learning things at first. Even a simple coin tossing or dice rolling program will do wonders. Then teach her the for-next loop in the coin program and ask something to the effect of how it might work for the dice roller...

Don't be surprised if she gets tired after a bit and goes back to blasting aliens or playing Dungeon Master or whatever as I remember doing that. But the occassional questions she might pop off with will let you know it's still on her mind.

If GFA Basic has lot of examples you could d/l (or create) I would use that. The best Basic for kids for the ST IMO would be STOS Basic. It was written as a game programmer's basic and you can load neocrome pics on-screen with one command as such. That's the kind of stuff that would get her going right off. It's got other stuff as well that allows serious stuff done with ease. The best part about STOS is there's LOTS of stuff you can d/l from the net that she can eventually hack into.

Hope that helps.

1870. All you need is to invest $5 for a FORTUNE!!! ACT NOW!!!

Newsgroup: comp.sys.atari.st
Date: 1997-05-03 00:00:00 UTC
From: Peter Sung <fantasia@hula.net>
Message-ID: <336B1899.446F@hula.net>
Source record: 122963

A little while back, I was browsing these newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $5.00! So I thought, "Yeah, right, this must be a scam," but like most of us I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 5 names and address stated in the article. You then place your own name and address in the bottom of the list at #5, and post the article in at least 200 newsgroups. (There are thousands) No catch, that was it.

So after thinking it over, and talking to a few people first, I thought about trying it. I figured what have I got to lose except 5 stamps and $5.00, right?

Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with my country Post Office, and others had with US Post (1-800-725-2161) and they confirmed that it is indeed legal!

Then I invested the measly $5.00.....

Well GUESS WHAT!!... with in 7 days, I started getting money in the mail! I was shocked! I still figured it would end soon, and didn't give it another thought. But the money just kept coming in. In my first week, I made about $20.00 to $30.00 dollars. By the end of the second week I had made a total of over $1,000.00!!!!!! In the third week I had over $10,000.00 and it's still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it's still coming in .....

It's certainly worth $5.00, and 5 stamps, I spent more than that on

the lottery!! Let me tell you how this works and most importantly, Why it works....also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. The process is very simple and consists of 3 easy steps:

STEP 1: Get 5 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 5 $1.00 bills and place ONE inside EACH of the 5 pieces of paper so the bill will not be seen through the envelope to prevent thievery. Next, place one paper in each of the 5 envelopes and seal them. You should now have 5 sealed envelopes, each with a piece of paper stating the above phrase and a $1.00 bill. What you are doing is creating a service by this. THIS IS PERFECTLY LEGAL!

Mail the 5 envelopes to the following addresses:

#1 B.C. Smith

P.O. Box 170

Greenland, AR 72703

#2 Beddingfield, Bobby

12404 Nokesville Road

P.O. Box 40

Nokesville, Va 22123

#3 Keen, Callye

44181 Bristow Circle

Ashburn, VA 20147

#4 Tom, BDB.

Via Damiano Chiesa 10

00010 Marcellina (Roma)

Italy

#5 H. J. Sung

1839 Keeaumoku St.

Honolulu, HI 96822-3004

STEP 2: Now take the #1 name off the list that you see above, move the

other names up (5 becomes 4, 4 becomes 3, etc...) and add YOUR Name as number 5 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there is close to 25,000 groups) All you need is 200, but remember, the more you post, the more money you make!

Don't know HOW to post in the newsgroups? Well do exactly the following:

FOR NETSCAPE USERS:

1) Click on any newsgroup, like normal. Then click on "To News", which is in the top left corner of the newsgroup page. This will bring up a message box.

2) Fill in the SUBJECT with a flashy title, like the one I used, something to catch the eye!!!

3) Now go to the message part of the box and retype this letter exactly as it is here, with exception of your few changes. (remember to add your name to number 5 and move the rest up)

4) When your done typing in the WHOLE letter, click on 'FILE' above the send button. Then, 'SAVE AS..' DO NOT SEND YOUR ARTICLE UNTILL YOU

SAVE IT. (so you don't have to type this 200 times :-)

5) Now that you have saved the letter, go ahead and send your first copy! (click the 'SEND' button in the top left corner)

6) This is where you post all 200! OK, go to ANY newsgroup article and click the 'TO NEWS' button again. Type in your flashy subject in the 'SUBJECT BOX', then go to the message and place your cursor here. Now click on 'ATTACHMENT' which is right below the 'SUBJECT BOX'. Click on

attach file then find your letter wherever you saved it. Click once on your file then click 'OPEN' then click 'OK'. If you did this

right,

you should see your filename in the 'ATTACHMENT BOX' and it will be shaded.

NOW POST AWAY!

FOR INTERNET EXPLORER:

It's just as easy, holding down the left mouse button, highlight this entire article, then press the 'CTRL' key and 'C' key at the same time to copy this article. Then print the article for your records to have the names of those you will be sending $1.00 to.

Go to the newsgroups and press 'POST AN ARTICLE' type in your flashy subject and click the large window below. Press 'CTRL' and 'V' and the article will appear in the message window. **BE SURE TO MAKE YOUR ADDRESS CHANGES TO THE 5 NAMES.** Now re-highlight the article and re-copy it so you have the changes.... then all you have to do for each newsgroup is 'CTRL' and 'V' and press 'POST'. It's that easy!!

THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup!

REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200

If these instructions are too complex to follow, try Forte's "Free Agent." It is freeware for noncommercial use. To download it, simply use a search utility and type "Forte Free Agent". You should be able to find it.

That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O. Box due to the large amount of mail you receive. If you wish to stay anonymous, you con invent a name to use, as long as the postman will deliver it.

JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.

Now the WHY part:

Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #5 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #4 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #3 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #2 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #1 and they each only receive 5 replies, that just made me $3,125.00!!! With a original investment of only $5.00! AMAZING! And as I said 5 responses is actually VERY LOW! Average is probable 20 to 30! So lets put those figures at just 15 responses per person. Here is what you will make:

at #5 $15.00

at #4 $225.00

at #3 $3,375.00

at #2 $50,625.00

at #1 $759,375.00

When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $5.00 to names on the list, putting your name at number 5 again. And start posting again. The thing to remember is that thousands of people all over the world are joining the Internet and reading these articles everyday, JUST LIKE YOU are now!! So can you afford $5.00 and see if it really works?? I think so... People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the Internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users,

every day, with thousands of those joining the actual Internet.
Remember, play FAIRLY and HONESTLY and this will work. You just have to be honest. Make sure you print this article out RIGHT NOW, also. Try to keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone is playing fairly.
Remember, HONESTY IS THE BEST POLICY. You don't need to cheat the basic idea to make the money!!
GOOD LUCK to all and please play fairly and reap the huge rewards from this, which is tons of extra CASH. **By the way, if you try to deceive people by posting the messages with your name in the list and not sending the money to the rest of the people already on the list, you will NOT get as much. Someone I talked to knew someone who did that and he only made about $150.00, and that's after seven or eight weeks! Then he sent the 5 $1.00 bills, people added him to their lists, and in 4-5 weeks he had over $10k.
This is the fairest and most honest way I have ever seen to share the wealth of the world without costing anything but our time!!!
Don't listen to the people that don't trust it and continue to say it's
illegal and don't work... They are just too much skeptics.
You also may want to buy mailing and e-mail lists for future dollars.
Please remember to declare your extra income. Thanks once again...

Wow, I haven't had any of those problems, although, <sigh> I did have to buy a true soundblaster to get sound working. My last card, a logitech soundman, was supposed to be soundblaster compatible, but I guess it wasn't.

As for the joystick emulation, I use a gravis joypad on a 586/160 with 32 megs of rams and it works fine.

Sounds like you need to do some tweaking, but the emulator will work really well.

Good luck

Tom

Tony, is it your opinion that STOS is harder to learn than GFA Basic? This is surprising news to me, as I have long heard STOS touted for the ease of learning compared with other structured BASICS. I don't think I put anything in my post that was fact, and I think I started the whole thing off with IMHO, but I felt she should start with GFA because she already had it and presumably the manuals as well.

But having used both languages, (obviously not to the extent that you have) it is still my humble opinion that STOS is easier to learn than GFA, at least at the rudimentary level. When I bought STOS, I also liked the manual a lot better than the GFA manual. The GFA manual can be intimidating (at least it was to me) while the STOS manual was easy to read and well laid out.

Again - just my humble opinion....

You didn't actualy, when you got to the langiage bit, you said STOS
is easier <smile>

>But having used both languages, (obviously not to the extent that you

I would hazzard a guess that you use GFA and dabbled in STOS, and I
have used STOS and dabbled in GFA :)

>have) it is still my humble opinion that STOS is easier to learn than

The opening of the STOS manual states that it is advisable to already
know BASIC before attempting STOS, and that has been in every STOS
manual ,

>GFA, at least at the rudimentary level. When I bought STOS, I also liked

Actualy for what we are talking about, an 8yr old learning, then ALL
BASIC would be on a par as they all have PRINT, INPUT and about the
same use of variables,
In the rest of my comments I think I tried to come accross as not
being biased towards STOS on the subject, as really any BASIC will do
for that level, but I think STOS does have more supprt re: Tutorials,
articles etc etc,
STOS is eeerm... well it isn't going to be much good for any other
language, where Hisoft and GFA will lead you into C, STOS will not,
but what would we guess an 8yr old will want to see on screen?..

something colourfull and moving I would imagine, = STOS :)

>the manual a lot better than the GFA manual. The GFA manual can be
>intimidating (at least it was to me) while the STOS manual was easy to

Yes I have the GFA manual, it looks like a knitting pattern :))

>read and well laid out.
>
>Again - just my humble opinion....

And mine... but at the point in question it didnt seem like it, and I have to add that there are varying levels, I always find myself a little insulted when people say how easy STOS is? ..(STOS made me bald you know <g>)...

PS I still think there should be a BASIC guide (tutorial) that covers all the main commands and in the minimum top 3, GFA, Hisoft and STOS, ie PRINT..eg1,eg2 and eg3 in the different BASICs,

I found some TOS img's on a link from the Pacifist mirror page at
http://www.jetman.demon.co.uk/st/index.html

If you can advise how to make any of these disk bootable, I'd be very
grateful...? I have an original Atari STf 1.2 TOS and don't want to hack
it's innards...

Hello everybody,

I have just begun to list all the atari programs available to download
from a web page ...
A titan work ... but will be very usefull for all the web users !
You can help me ...
If you are the author of one (or more) atari program and if this
program is available to download from a web page (NOT ftp please !),
then, can I ask you to send to me :
1 * its name
2 * your name (author)
3 * kind of program : commercial, shareware, chocolateware, freeware,
and so ...

Also don't hesitate to comment possible errors !
Thank you very much

The page is already available at :

>The http://www.gaelic.com came up with some ugly color
>Only http://www.switchboard.com was showing the hole page correctly,
>even if it was a long time to do so.

Hi Joergen,

Thanks for the reply. One question, though. In your CAB Options-Display
do you have "Text instead of Images" checked? If so, the error problem
doesn't appear. There are a few typo's above, so I'll repost the http's.

http://www.qvc.com/
http://slate.com/
http://www.pcquote.com/
http://www.gaelic.com/
http://www.switchboard.com/ (This site should have about 20 gif's)

The reason I posted these five are that they have nothing to do with MS
only, progressive JPEG's, specific "My browser ONLY" that would bomb CAB.
There are a lot of Web sites that have gif display problems for CAB. I
know that a lot of CAB/STiK beta testers are working hard on this one :)
For some reason, a lot of the newer/updated Web sites are causing this
problem. For more info, check the "New CAB.OVL" thread via DejaNews.

C'est la Vie,

Charles

Thanks muchly for all the help people posted and e-mailed to me. I've plumped for Sweet Sixteen rather than Cubase as the MIDI engine. Very nice it is too, and does exactly what I want to do.

My new question is: Is there any way to make the mouse move faster on the screen. I'm used to a PC mouse pointer zooming about for very little effort on the desktop? As you can appreciate, I have no manuals to refer to so any help would be great.

So, is mouse pointer speed scaling a parameter or do I have to clear a lot of desk space?!

Anyone out there who subscribed to St Informer magazine and wanted to get a refund ever get it? Last I heard, the owner of ST Informer was going to send out refunds after he got enough request in. Then the refunds were suppose to go out to everyone who asked at once. Well the check has not been in the mail for me! Its been almost a year now since I sent in payment for a one year subscription with floppy disk. All I ever received was one issue and nothing further.
I got in contact with the owner, who told me the above and to expect payment.
Never heard from him since. No magazines and no refund. Would be interested in hearing other similar stories about ST Informer magazine.

Hello... my cousin gave me an STe 1040 a couple of days ago and I'm trying to work out what to do with it, apart from play Bubble Bobble :-) A few questions that aren't in the FAQ; email responses if they're too boring to post:

* What I have got? Where does my STe come in the grand scheme of things?

* What are the two ports on the left-hand side of the machine? (i.e. not the MIDI ones) 'cos they're not documented in the manual.

* 800k disc images... how? My Acorn deals with 720k Atari discs fine, but how do I go about using the 800k .ST images around on the internet? Is there a special formatter I can get?

* The sound is a bit iffy; any good reasons why it's only just started working (through a TV) when it didn't for a couple of days?

* Is there any way of using my old 50Hz BBC monitor with the Atari? I got given a hi-res B&W monitor with it, which has a decidedly non-standard connector. Failing this, are the old lo-res Atari monitors still available?

* Notator; where does this come in the order of MIDI sequencers?

* My main machine is an Acorn RISC PC <ducks> which I love dearly; is there any way of connecting the ST to it so that it could make use of the RPC's hard drive?

Also, it's interesting how the old 'standard' Atari joysticks have all but disappeared from high-street stores... they're all analogue these days. Silly :-) Now I think of it, if anyone's interested, there's a computer store in Oxford which in a pleasant timewarp (just down the Cowley Road); it still sells 8/16-bit games, 1200 baud modems, QL accessories and other goodies.

I hope somebody can put me out of my misery; cheers,

You might consider using logo which used to be available on the ST Language disks. There is a good book called "Learning With Logo" by Daniel Watt (a Byte Book - contact them about getting a copy). It was US$19.95 originally.

The book had helpers hints, pitfalls, and good explanations of the concepts they were introducing before each section and the new programming problem.

I tried with my son a couple of times, and although he loved to do some simple things on the screen, I never was able to get him to make the transition to anything more complex than simple things on the screen. Our first attempts weren't even graphical. Then when he got to be 15 he suddenly latched onto programming as a way of life and now at 18 it is his all consuming passion - and in some areas he is far more an expert than I. C is his forte now.

Have fun but don't be too disappointed if they aren't ready to follow through quite like you what them to now. You may have planted that all important seed and later they will take up the gauntlet. Wayne

well theres probably tons of ATARI related gifs in your browser cache
folder:), but you wil never know if its copyright,

I go to a lot of web pages and a lot of people are using the same
graphics, or the same gaphics with differnt colours?

I think most just use what they want.....no one seems to bother?
user or original owners?

I cleaned out my cache recently and sorted all the ATARI graphics in
Backgrounds, Buttons, and Icons, zipped the lot up and posted it to
alt.binaries.atari
that was a couple of weeks ago and I havent retained them, but they
may still be in there ?

: questions that aren't in the FAQ; email responses if they're too boring to
: post:

: * What I have got? Where does my STe come in the grand scheme of things?

Your STe is a fine machine - potentially the most supported ST of them all
(that is, most of the cross-machine (ST/Falcon/TT) software written for the
Atari is written to run on these machines). It's not the most powerful, nor
the least powerful, and it has some very cool goodies stuffed in it.

: * What are the two ports on the left-hand side of the machine? (i.e. not the
: MIDI ones) 'cos they're not documented in the manual.

Easy - they're digital joystick ports, for use with software written to
take advantage of them, of which sadly, there isn't too much yet.

: * 800k disc images... how? My Acorn deals with 720k Atari discs fine, but
: how do I go about using the 800k .ST images around on the internet? Is there
: a special formatter I can get?

I don't have a clue as to what you're talking about on this point. :)

: * The sound is a bit iffy; any good reasons why it's only just started
: working (through a TV) when it didn't for a couple of days?

That is most strange. Was no sound coming out when using the TV or the
monitor prior to that? The mono monitor may not have a speaker, or your
tv's sound was off. I can't think of any other reason to be honest.

: * Is there any way of using my old 50Hz BBC monitor with the Atari? I got
: given a hi-res B&W monitor with it, which has a decidedly non-standard
: connector. Failing this, are the old lo-res Atari monitors still available?

As regards the BBC monitor, I would think so, but I haven't a clue. As to
the old lo-res monitors, they are still available.

: * Notator; where does this come in the order of MIDI sequencers?

I'm not a MIDI user, so I'll leave that to another to answer.

: * My main machine is an Acorn RISC PC <ducks> which I love dearly; is there
: any way of connecting the ST to it so that it could make use of the RPC's
: hard drive?

Absolutely. Ghostlink (I think it's called) will do that.

: Also, it's interesting how the old 'standard' Atari joysticks have all but
: disappeared from high-street stores... they're all analogue these days.
: Silly :-) Now I think of it, if anyone's interested, there's a computer
: store in Oxford which in a pleasant timewarp (just down the Cowley Road); it
: still sells 8/16-bit games, 1200 baud modems, QL accessories and other
: goodies.

: I hope somebody can put me out of my misery; cheers,

I have a 20meg cache and you are right about it being full of Atari
related gifs. I just don't want to "take" gifs that are not public.

> I cleaned out my cache recently and sorted all the ATARI graphics in

I just checked alt.binaries.atari and they are no longer there. If
anyone has this file, please send it to me e-mail. I guess I need to
start reading this group. :)

Is there a program (besides CAB) that will display animated gifs?

There are only 2 real flavours of the ST, the ST/f/fm & The STe. The
STe is the Enhanced STfm, I think the differences are in the FAQ.

> * What are the two ports on the left-hand side of the machine? (i.e. not the
> MIDI ones) 'cos they're not documented in the manual.

You should have had a suplement sheet with the manual, they are extended
joystick ports, they allow things like analogue joysticks to be plugged
in but I never saw a joystick that worked int hem or any game that
supported analogue! The Jaguar joypad fits and works there though but
not too many games support it.

> * 800k disc images... how? My Acorn deals with 720k Atari discs fine, but
> how do I go about using the 800k .ST images around on the internet? Is there
> a special formatter I can get?

If you mean the .MSA archives then you need Magic Shadow Archiver, have
a look on the site where you are seeing these disk files, mail me if you
can't find it.

> * The sound is a bit iffy; any good reasons why it's only just started
> working (through a TV) when it didn't for a couple of days?

Sounds bad to me, did it work through the phono sockets on the back or
not?

> * Is there any way of using my old 50Hz BBC monitor with the Atari? I got
> given a hi-res B&W monitor with it, which has a decidedly non-standard
> connector.

I really don't know but there may be.

>Failing this, are the old lo-res Atari monitors still available?

You can probably still get the SC1224 and suchlike still but it is
probably be easier to get those old Phillips monitors that everyone with
an Amiga had, I don't recall the name but it was something Mark II.
Maplins should be able to sell you the right connector if you can find
one.

> * Notator; where does this come in the order of MIDI sequencers?

Don't know much about MIDI but the more important question is does it do
what you want?

> * My main machine is an Acorn RISC PC <ducks> which I love dearly; is there
> any way of connecting the ST to it so that it could make use of the RPC's
> hard drive?

I very much doubt that they use compatble filesystems or anything.

Nope it works fine! I used 6.5.5. and booted from a single partition
100mb Zip disk, I suspect that this may have something to do with the
manual that comes witht he Link 1 & 2 is actually for the AdSCSI
adaptors and they don't support this feature.

1905. GEMulator96 problem persists

Newsgroup: comp.sys.atari.st
Date: 1997-05-04 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.050497.191221.47@wxs5-8.worldaccess.nl>
Source record: 122851

I still have this problem with GEMulator 96. I took out the card and put a 256 Kb TOS ROM image of TOS 2.06, file name magic_pc.os, into the directory where the GEMulator 96 program is. Even when I install something like "first time install, search for Magic", it doesn't find anything and keeps the "not running" message. I hunted for the INI file. I've got two, one called GEMUL8R.INI (which came with the GEMulator 4.something, prior to 96) and one called Gemulator 95, which belongs to GEMulator 96 I suppose. These are both NOT ASCII FILES. So I don't know what to change. They're both in the "Windows" directory, by the way, and were put there by GEMulator itself when I installed it, long time ago.
I also tried running with deleted INI files. The same problem.
So the card has been removed now. How do I go about making it work with a disk-based TOS, an image file such as I've taken off the net and which works perfectly with PacifiST? Do you actually have GEMulator 96 yourself, or GEMulator Classic? GEMulator 96's manual says nothing about anything that doesn't involve the ROM card. The ROM card NO LONGER WORKS. The 'scan card' option in GEMulator recognises exactly the same (i.e. NOTHING) with or without the card installed.

I believe the "*.st" images are the images of atari disks for use on
the PaCifiST emulator for the PC, so you would need a PC to use them,
it is all ATARI software but in a format for PC software to read and
run ...

Umm... well, there are lots of Atari disc images around on the internet; so
I've formatted the discs on my Acorn (720k) and written the disc images to
the discs with a small proglet. My question is how can I make use of disc
images which are >720k except with an emulator? This seems to account for
most .ST files I've found, see.

BASIC would probably be the best language to start with, although I
wouldn't use ST BASIC, which is very buggy. Goodman PDL currently sells
FirST Basic (which Atari began bundling with their ST packs in the UK)
for £1.95 - it's much more stable, and is supposed to be one of the
best starter packages out there. STOS is also supposed to be a very
good starter language as well.

Here's to your daughter becoming another Dot Brumleve or Katherine
Ellis :)

I was chatting to a French chap who came over to the UK for the shows
(selling ST Magazine etc) and he said the above.
He also said it would be around another month before they could move the
archives from CNAM to a new location.
That would mean they still have the files etc somewhere but just need a
new host to put them on ...

1915. FS: Hardware

Newsgroup: comp.sys.atari.st
Date: 1997-05-04 00:00:00 UTC
From: danbrown@cet.com
Message-ID: <5kj32l$6a8@legends.cet.com>
Source record: 122861

I have some items that I've come accross that I'd like to get rid of.
I am NOT getting out of Atari, just thinning my stock :) Most of these
items I bought at one time, and they have sat unused for the majority of
the time, or I have picked them up when purchasing complete atari systems
at once time or another. Everything listed works, and has been tested -
unless otherwise stated. thank you.....

Item : Futures Systems (Indus) 3.5" floppy drive
Model : GTS-100
Type : External double sided disk drive
Cond. : NEW
Quant : 1
Notes : LED Display, Full black case, includes power supply and original
Notes : box. These types of drives work exellently
Asking: $50 + Shipping

Item : Mono Monitor
Model : SM124
Type : Atari Monitor
Cond. : Great
Quant : 2
Notes : Includes Original box and Power Cable
Asking: $50 + shipping OR TRADE FOR SC1224

Item : Complete External Hard drive setup
Host Type: ICD Link
Mech Type: Rodime
Megabytes: ~44mb formated
Type Case: "Atari" shoebox
Condition: Good
Quantity : 1
Comments : Includes DMA cable, and Power cord. This is complete setup!
Comments : Plug 'n Play deal. This is a cheap way to get a complete hard
Comments : drive setup!
Comments : If you need more room, you can easily pull the Rodime mech
Comments : and put in something bigger!
Asking : $100 + shipping

[-][-][-][-][-][-][-][-][-][-][-][-] [-][-][-][-][-][-][-][-][-][-][-][-]
M I S C
[-][-][-][-][-][-][-][-][-][-][-][-] [-][-][-][-][-][-][-][-][-][-][-][-]

Item : Hard Drive Case
Comments: I have a very nice 'plus impulse' hard drive case (2 drive
cap. plus power supply, cooling fan, etc. These sold via a
local dealer here for $80 each) The drives sit side by side.

And it's made out of STEEL/METAL not this plastic crap you see
nowdays :) includes power cord

Item : External NEC-25 CD-ROM
Comments: I do not have the power cord for this. But I can give you
the specs on the power supply (as I have another with the
power supply) so that you can get/find one.

Item : LAZER 'adapter' box. I can't remember what these are called.
Comments: But they are the boxes that plug into the computer
and the lazer printer plugs into this box. Comes with the
Lazer printer cord. And 1 DMA cable (as it's built into the
box) This box also has a DMA pass-threw. (I heard these were
selling for $60)

Item : MFM hard drive. ST-251 formated to 65mb or so.
Comments: requires controller card (IE Adaptec 4070) and host adapter.
I know the drive works, but I fried the AdSCSI plus host and
the Adaptec 4070 a couple of weeks ago :(

Item : 5 (?) MFM hard drive mechs.
Comments: I don't know what works, and what doesn't. They all did work
when I put them in the box, but I cannot test them at this
point.

Item : VideoKey
Comments: Allows you to hookup 2 monitor's at once and switch between
them via 1 button. (I saw these selling for $25)

And there is still more stuff that I am uncovering. The prices mentioned
in this MISC area are what I've seen them sell for. They are NOT set
prices. Feel free to make me an offer.

Asking: Lets talk!

I have used Maccel, Warp9's mouse accelerator, and Silkmouse.
Silkmouse beats the others hands down, and takes less space than
Maccel. Thanks to Mark Slagell!

I was told that somebody (Atari Corp?) customized Superbase Pro for Hobbytown. Of course, this could be done with any other good database prg, just as Dave Troy did with dbMan. Dave did a series, I think, in Current Notes about how to do this.

Tony could also try out EZMoney from Anthony Watson, Time Sheet from F10 (Frank Vuotto), or go for the Cricit Bar Code + software. It is listed in CompDirect's catalog (and in Toad's).

I suggested 'The Biz' because it looked perfect for his needs. Too bad it isn't available.

Due to my own error, I ended up subscribed to about 20 more issues.
This is the first I have heard that refunds have been offered
(although the offer seems to be perhaps vaporous).

I am not holding my breath - I am subscribing to Atari Computing and
Current Notes, instead. Once bitten, never shy.

Source record: 122868

For Sale:
----

* 4160 STE (TOS 1.62, 4 Mb)

* MEGAFILE 60

Canadian offers only! Will sell to best offer, or trade both
together for either of the following:

* MEGA-STE (TOS 2.06, 4Mb Ram, HD Floppy, Internal SCSI HD)

* Stacy 4 (TOS 1.04, 4Mb Ram, Internal HD).

Internal hard disk size un-important, local prices on SCSI drives
are rather affordable.

NOTE: nothing against our friendly neighbors from down south,
just Canadian banks causing troubles for cashing foreign
currency of any kind, including American.

However, if you're interrested in trading your MEGA-STE
or your Stacy, we can arrange something, as there is no
currency exchange involved.

More details available on my homepage.

Yes, this is wrong. TOS can also boot from BGM partitions.

Booting from large partitions is not a feature of the host adaptor but
of the hard disk driver software. The host adapter has no influence on
partition sizes.

With TOS 2.0 and higher the maximum partition size is 1 GByte, not 512
MByte.

> AHDI and HD Driver both have their own limitations. Now, what host
> adaptors do they use? But of course, AHDI's from Atari, so it has its own adaptor. How about its limitations, as well as HD Driver and its adaptors, if one comes with it? How about the Link and Link II?

There is no special adaptor for HDDRIVER. The partition size limits
aren't imposed by the driver software anyway. It's GEMDOS that limits
partition sizes. The host adaptor has nothing to do at all with
partition sizes. This is not a question of the hardware but a question
of your software, i. e. of GEMDOS and your hard disk driver.

> size. I'd like to use all the space on the drive without having to resort to big cluster sizes. How's this possible with ICD, AHDI, and HD Driver?

Basically cluster sizes are determined by GEMDOS, not by your hard disk
driver. So you won't be able to influence this by using another driver.
HDDRIVER, however, has an option to create minimal cluster sizes when
partitioning a drive. This way you can be sure not to lose more space
than absolutely necessary.

> back.

Media change information is not sent by the host adapter but by the
drive on the first access after a media change. It is unlikely that a
bug in the host adapter hardware results in media changes not being
recognized. Such a host adapter probably wouldn't work at all.
There is no special media change signal at all.

Concerning the Falcon BIGDOS08 has a bug. For more information ask the author of BIGDOS. I can't comment on crashes with CBHD. Basically crashes when running BIGDOS are no common problem because there are a lot of HDDRIVER users where BIGDOS works fine.

Thanks to all participants for debates about cracked Cubase/Notator.
I could not find this days free of key Notator, but I got AtariCubase v.3,
working fine w/o inserting dongle in cartridge port and I am really happy.

I think it is right time for C-Lab/Emagic to make last version of NotatorSL
free of key. Yes, authors themself should crack their program. It will work
faster, with less chance of freezing and processing speed may be almost
doubled using 16Mhz accelerator like on my STE1040 4Mb w/mechanical
switch 8/16 Mhz.

Notator cannot bring them profit anymore until it stuck to current dongle,
but Emagic is loosing their honour, when users paid for their product a lot
and have nothing now.

So, upload of cracked Cubase to alt. groups with a word "warez" is possible
as well as Emailing. But are Atari newsreaders or Email readers capable
to get binaries files (zipped)? I really dont know.
I never used Atari for Internet.
Please express your opinion in this thread.

Believe me folks, Notator was better than Cubase, but hardest-to-crack Notator
was not so popular as easier-to-crack Cubase. Pirated versions of Atari Cubase
became buzzing and buzzing word among non musicians but curious majority.
That was cruicial for Cubase popularity in Atari platform.
The "warez" copy of Cubase was best commercial Steinberg ever had.
Market users (musicians) was forced to buy Cubase for reason of manual to find
countless hints inside manual. In money sense Steinberg won, C-Lab lost
(inspite of better product!). Of course it is unreal to use Notator w/o
manual.
This is THE LESSON for next brilliant or genius guys who may be blind in
super heavy protection of their amaizing product.
C-Lab/Emagic launched Logic claimed "it is light speed ahead of Notator".
It was not true. Overall speed was slower. For my knowlege musicians
was not convinced to that claim. Without
this claim Emagic could do better with Logic (in money sense also).

Needy.

OK, I've now spent more than week faffing around testing Gemulator and have reached the following conclusion:
++
With Gemulator using MagiC 4 or 5 16 colour display is NOT possible.
****

Before I print this "fact" in the review can anyone prove me wrong!?

I can get 16 colours with TOS no problem. No matter what I try with MagiC 4 and 5 I get either mono (at various resolutions) or ST-medium, or garbage, but nothing else.

I've tried every setup option, every version of CHGRES I can get my hands on (it's completely ignored AFAIKT - can anyone confirm this?), different NEWDESK.INF files and all the other tricks I've used over the years, all to no avail.

I haven't got a copy of MagiC 2 so can't test that but frankly Gemulator either supports MagiC or it doesn't, users can't be expected to downgrade. Has anyone got a Geneva setup up and running in 16 colours?

Print date is looming fast now so if _anyone_ can prove me wrong or help I'd like to know ASAP I really want to finish this review and it's driving me crazy!

c> that originally came with my 1040ST as well as ST Basic. Would
c> Turtle Graphics still be the best way to go? I also have GFA and
c> MegaMax C but I think that would be way too advanced, our local
c> schools are not that far advanced in conceptual thinking. Any ideas on
c> the best way to teach programming concepts to kids on the ST and have
c> them see some results so they do not lose interest.

I think the limited capability of Turtle would soon bore her.

At 8 it should be possible to make good progress with Basic, preferably an
interpreter as she will get fed up with waiting for a compiler.

1940. FS: Atari 1040 ST, b/w monitor, Cannon Printer

Newsgroup: comp.sys.atari.st
Date: 1997-05-05 00:00:00 UTC
From: abatwina@pacbell.net
Message-ID: <abatwina-0505971107530001@ppp-206-170-209-145.grdn01.pacbell.net>
Source record: 122886

I have an old 1040 ST with a black and white monitor, a whopping 20 megs of hard disc storage and a Cannon BJ 100 printer that I would like to sell. The computer would make a good doorstop or prop up for a table wihth a short leg and the hard drive is big enough for a corner stone in a modern repliction of a Gothic Cathedral...:)

If you, or any one know has an undying loyalty to Atari... email me and make an offer.

Thanks,
AndB.

1941. In search of atari GEM/TOS software to uuencode & uudecode binary files

Newsgroup: comp.sys.atari.st

From: gblanken@freenet.columbus.oh.us
Message-ID: <862854812.15117@dejanews.com>
Source record: 122887

I am in search of TOS/GEM software for my Atari 1040 STe, that will
uuencode and uudecode binary files.
Examples: any non-ASCII file, like audio/video clips and graphics.
So I will be able to send them via Ant Mail to another user.

Shocker 2 and all the Hintzen, Verwohlt games were among the best,if you liked Oxyd then this is what you want.Don't mind that it's 1997 and these games came out in 1993-94,that's irrelevant.Just get Shocker 2! The only drawback is it runs in Monochrome only,but the gameplay has such incredible depth that you wont care after a few levels. Just use a mono emulator if you have a color monitor.
I just thought I would enter this into peoples consciousnesses (sp?) because I truly appreciate gifted,creative game designers like these guys.And with all the crap that roars down the pike these days on all computer platforms we need all the help we can get.

Show these guys that they matter,order their games please! No,I am not affiliated with them in any way.You can tell because I am not writing in broken English :) . And yes,I do own a PC,and play all the newest titles on thePC,N64, Playstation and Saturn regularly,my neighbor reviews them for a magazine and gets free copies all the time,I get them from him when he has an extra.It's mostly all technically astounding crap,it really makes me sad sometimes,what a waste of technology.(Mario 64 is kind of cool,though.Just *kind of*)

Lets keep all these great game creators encouraged! It's worth it!

This is a comment to message 1128.
There are comments to this message.

OK, I've now spent more than week faffing around testing Gemulator and
have reached the following conclusion:
++
With Gemulator using MagiC 4 or 5 16 colour display is NOT possible.
****

Before I print this "fact" in the review can anyone prove me wrong!?

I can get 16 colours with TOS no problem. No matter what I try with MagiC
4 and 5 I get either mono (at various resolutions) or ST-medium, or
garbage, but nothing else.

I've tried every setup option, every version of CHGRES I can get my hands
on (it's completely ignored AFAIKT - can anyone confirm this?), different
NEWDESK.INF files and all the other tricks I've used over the years, all
to no avail.

I haven't got a copy of MagiC 2 so can't test that but frankly Gemulator
either supports MagiC or it doesn't, users can't be expected to downgrade.
Has anyone got a Geneva setup up and running in 16 colours?

Print date is looming fast now so if _anyone_ can prove me wrong or help
I'd like to know ASAP I really want to finish this review and it's driving
me crazy!

Can someone please repost this on Usenet and NeST or anywhere else along
with my email address so I can get a definitive answer one way or the
other...TIA!

>> : > terminator.

Hi Malcolm,

If it is a MKII, then the termination on the motherboard has been removed
in order to fit the internal SCSI cabling. If you have removed the drive
but not replaced the terminator packs onto the board, then you will have to
do so, or have it done by a service tech. There are two or three 220 OHM
single in line resistor packs, I think 8 pin. The header connection has to
be desoldered and the packs resoldered in.

Our tech department has this info if you need it, or you can send the
machine to us for Certified C-Lab Service.

All the best,
Chris @ Computer Direct

I lost the price I paid for a one year subscribtion with disk. I had been
a subscriber for several years before and saw a patterned of delayed
issues developing. I chose to payup anyway. I felt the publisher had
provided good service for several years and deserved the support. At the
time Rod sent me a long email explaining his difficulties. I felt his
business failure as
a loss to the Atari community and I hope he put my money to good use.

You may need to reserve more space for other programs. Under options,
go to the cache menu. On the internal cache side, try increasing the
reserved space. I use Edith as my editor and had to bump this number up
from 128k to 256k.

The B&C crew had one at the Sacramento Atari show last year,
but I doubt you would be able to pry it from their hands:).
He said he had been trying for five years to get the previous
owner to sell it to him. It was slick.

E-Mail Your Way To Riches!

Dear Friend,

We all know E-mail is here to stay. It's fun, easy and exciting! Would you be interested if we could show you a way to make well over $1,000 per week doing it?

This is not a joke. You may have seen many people trying to tell you that you can make money by joining this or that scheme! Guess what, you decide to go for it and then you get nothing but frustration and disappointment! We are here to take your frustration and disappointment into an Electrifying Adventure!

We have been marketing on-line for almost 2 years now! We have never spent one red penny on advertising and made nothing but profits. We can show you how to make money every day of the year. Many people may think this is untrue or it just can't be done. We are here to tell you that it is absolutely not true. The biggest mistake people make about marketing on-line is that they sit and wait for people to contact them. You will never make it if this is your approach and we'll tell you why. There are over 60 MILLION people on-line right now, and seven new people logging on every minute of the day world-wide and everyone is offering something. So how do you get a potential client or a new customer before your competition does? The answer is simply " Creative E-mailing" and it WORKS! I'll tell you why. You're taking your product, service or idea directly to the market instead of waiting for the market to come to you!

Here are a few testimonials we'd like to share with you (They're all 100% TRUE!):

Internet Communications, my wife and I owe you so much. We ordered your Creative E-mail System and within the first week we received over $1,150 in orders for my Internet Consulting business!
--Charles -- California

I have bought two so-called E-mail programs that cost me over $600.00 when I received them. They were extremely difficult to operate and it took me about two weeks to figure them out. Once I did, they were so time consuming it just wasn't worth my time. When I received your course it took me about four minutes to install and I was in business! Within the first 24 hours of my first E-mailing I received over $580.00 in sales over the phone. That first week I grossed over $2,000.00! I really can't believe how easy you made this, anyone can do it! Thanks!
--Dennis -- Illinios

Hello, I'm a divorced mother of two children. I wanted to thank you for helping me out. This was my first time buying anything on the Internet. I was skeptical at first but I figured I'd take a chance. This was the best chance I've ever took! My part-time business is now a full-time home-business, thanks to your

Creative E-mail System. I had to hire my two family members to help me out!
This is GREAT, thanks so much! I'd recommend this for anyone!
--Ellen -- Florida

You may have seen other people offering products "E-mail Programs, E-mail Addresses, Extractors, Etc." The vast majority of these products are very over-priced and very difficult to even use. None of them even supply you with current, up-to-date, FRESH & RESPONSIVE E-mail addresses! Our Creative E-mail System puts everything into one package to make your profits soar immediately! Even if you do not have a product or service to offer, we are going to give you over 500 how-to reports that you will have full reprint rights to! What makes our course different from anything else being offered anywhere is that we're dedicated to your success! We do not succeed unless you succeed! All of our E-mail Address Databases are created in house. We do not trade our databases with anyone because people are selling extremely bad lists on the Internet. Many of other people's databases are filled with duplicate addresses and many of them are undeliverable. We keep our own database so we know exactly what we have and we keep nothing but the best. There's no other way. We believe in producing high quality products that should be priced reasonably for your success! Read on to see the special bonuses you will receive.

******** SPECIAL 10 DAY BONUS ********

If you order within the next 10 days we will include:

1) 500 How-To Reports (You may resell these at any price)

2) Your Personal Complete Guide To The Internet -- This 175 page e-book covers every single aspect of the internet. You will never have to buy another internet book! When you complete this book, you will know more about the internet than 90% of the people online right now.

3) When you purchase our 8 MILLION SUPER responsive E-mail list we will include Mega-Mailer. It sends 250,000 E-mails per hour! All other orders will receive Pegasus Mail. It mails about 30,000 per hour.

Here's how to get the Creative E-Mail System:

All orders are delivered on CD-ROM or 100mb Zip Disk (Iomega).

============> E-Mail Databases <================

2 Million FRESH E-mail Addresses only $ 99.95
4 Million FRESH E-mail Addresses only $179.95
6 Million FRESH E-mail Addresses only $249.95
8 Million FRESH E-mail Addresses only $299.95

You will be sending your Marketing Letter to 2, 4, 6 or 8 MILLION People! To mail to 2 MILLION People by U.S. Mail at $.32 per stamp would cost $640,000.00, not including envelopes or paper! The price of 2 MILLION E-mail Addresses isn't even a fraction of the cost. And the great thing is that if you have 10 products, you can E-mail to your list as many times as you want to! Your profits will never stop soaring! Don't pay someone else to send your

advertisement out, do it yourself and save big money! The average cost right now to send your ad one time to ONE MILLION people is $1,400.00. You can send it 100 times to EIGHT MILLION people for only $299.95 and that includes Mega-Mailer that sends 250,000 per hour!

==========> Order Form <==========

Yes, Internet Communications Inc., I wish to take you up on your SPECIAL 10 DAY OFFER FOR YOUR CREATIVE E-MAIL SYSTEM, INCLUDING THE TWO SPECIAL BONUSES: "Complete Internet Guide Book" and "500 How-To-Reports". I understand I have to completely fill out the order form so you can fulfill my order.

>Mint to run under MagiC.

Yes!!!

Amaizingly, MiNT under Magic seems to be possible. I only ran this system
for a VERY short time (fear of curruption of my Minix-fs partition) but it
seems to work. My quick tests showed that MiNT takes over all of the process
scheduling, and XDD/XFS support, while Magic acts as the AES.

Basically, run MiNT in the autofolder during the second time around the
booting loop. To use Magic's AES, do NOT have any GEM= line in MiNT.CNF.

Source record: 122777

```
Requested minimal specifications:
-------------------------------------------------
Stacy 4
-------
TOS 1.04
4Mb of Ram
Internal HD
-------------------------------------------------

Internal HD capacity is not important, as replacement SCSI drives
are available locally, but I do need that Internal SCSI controller.

Preferably offers from within Canada or, if the deal is right,
from United-States... although I would rather avoid the burden
of Canada Customs if buying from the US.

e-mail offer and details (condition of equipment, included goodies),
and specify the currency when quoting your offer.

See my homepage for more details and possible trade-in solutions.

Yes, it's version 2.3 in English. And right now we only have one copy left.

We purchased it from Compo, who produced the translated manual.

No... the point was that I got it with the ST and don't know what to do with
it :-) But I've got a keyboard I can hook it up to, so I'll have a play now
I know.

Yes, I tried that. I use also a PC with MS explorer 3.01 running
under w95. In fact I built the pages on the PC. I tried several other
pages out of my CAB cache folder. A lot of them show wrong formats in
wensuite. In general pages formatted by using the table tag in order
to get columns are not presented right

You're right there. I agree that animation and frames are not
essential, but nice, I mean I could also use a terminal program to
access websites ;)

Jan Diertens (jdierten@Inter.NL.net) wrote:
:
: Yes, I downloaded it too. It's a selfextracting archive serving
: nothing but plain white on my little screen. (anybody knows why
: it didn't unpack?)

Well, I unpacked it last night and the self-extracting archive worked
properly for me.

: The new name of the program is WENSUITE (web, email and news suite?)
: You can now actually select and view the mail and news windows.

Yes, they changed the name of the package. I guess to reflect the
increased functionality of it. I like the new news and mail windows.

: A ppp unit is implemented, but I could not get it to work, the
: program bombed away after connection.

Hm, I didn't even get this far. The set-up of PPP was very straight
forward and easy, but in my case the simplification went too far. I need
to be able to toggle the return key three times upon connection before I
get the first prompt from my ISP. The early addition to STiK of the
ability to wait a fixed amount of time, as well as the ability to send a
carriage return and/or line feed, were done, in part, because of a request
by me. Unless WenSpace implements a similar feature, I will not be able
to test it an-line all. Steve Adams said that I was not the only person
to request such a feature, so it is probably worth the effort for the
developers of WenSpace to similarly enrich their login language.

Also, I don't know what I need to do at the end of the script to make sure
WenSpace finds my IP number. The instructions with STiK are much more
clear about this. Do I use the last "wait for" field to wait for the text
the ISP sends just before the IP number, and the leave the "reply with"
field blank?

: This program is very fast, but it still is not able to show forms and
: tables the way it should be. Also no animated GIF's nor framesupport.
: You still cannot reach the available fonts.

I had no problem changing the default fonts. Tables looked OK, but I did
not test this feature very carefully. Forms seemed to work, but looked a
little scrambled. I have had some serious trouble getting forms to work
from within CAB. Often clicking on the "submit" button within CAB will do
nothing! And CAB often "forgets" some of the data I have entered in to a
form if I move the window around. Also, I have to type very slowly for
CAB to read all of my keypresses when entering data into forms, whereas
WenSpace was flawless in this regard. So this is an area both browsers

need to work on.

WenSpace does not currently support either frames or animated gifs. But if the added speed is gained at the expense of these, I almost think it is worth not having them. The readme file says that frame support and animated gifs will be supported in a future version. We'll have to see how that works.

: I would say if they sell this program commercial the demo should be
: perfect. At the moment I don't see a reason to buy this program as it
: doesn't perform as promised.

Well, I'm not going to spend money on it if I can't get on line with it, that's for sure. On the other hand, I am very happy to see progress continue on this project, and I don't expect the demo, or even the program, to be perfect. What program is? Certainly WenSpace is not ready for commercial release yet, but it seems to be getting very close. Even now, WenSpace has some considerable advantages over the current CAB, as well as many real disadvantages. I think it is very healthy to give the Atari users the opportunity to decide which package best meets their needs.

Well here the PPP link layer worked fine.
The demo version only can connect to their site. That was the address
that worked. and no bomb at all.

>This program is very fast, but it still is not able to show forms and
>tables the way it should be. Also no animated GIF's nor framesupport.
>You still cannot reach the available fonts.

hmmm before saying that you might want to test it a little more.
The fonts are available/reachable. The tables are displayed correctly
like they should. I don't see your problem. Animated Gif is not
implemented AFAIK.

>
>I would say if they sell this program commercial the demo should be

The reason is that it is compact, Very fast(which for a web browser,
it's really crucial) and the dithering quality is WAY better than CAB.

No reason?

Hi, have been told that I should get a hold of Power Dos

Power DOS
Multitasking Operating System
for the Atari ST/TT computer
PowerPoint Software
PO BOX 942
Merlin OR 97532

Does any one of you know if the company is still in business?
Where can I get a hold of Power Dos? Thanks!

1976. ULTIMATE ATARI PROGRAM LIST !

Newsgroup: comp.sys.atari.st
Date: 1997-05-06 00:00:00 UTC
From: dipching@ping.be
Message-ID: <862947376_OASIS_@ping.be>
Source record: 122790
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I'm very pleased to ascertain the enthousiasm for my first announcement
about the ultimate list for atari programs available to download from
web pages ...

Please, go to see by yourself what is becomed this page ... it's
growing up from day to day and I'm only waiting for people who don't
yet have send me their program to put on ... english programmers are
certainly not the least ... far away from that ...

So if you have developped any kind of program for the atari platform,
don't hesitate anymore to communicate the following data ... I will
put them as fast as possible on the page (within two days ...)

Program NAME.
Author NAME (you, little genius ...)
The URL ADDRESS from where we can download this (these) little marvel.

Thank you to everyone who has sent datas about programs ... even if
they have not developped themselve the program ... they have found it
somewhere in the gigantic web ...
thank you for your continuous collaboration ...

How, let's go futher, this list must become THE ULTIMATE ATARI PROGRAM
LIST available on the web.

>>>>>>>>>>>>http://www.ping.be/~pin10575/PRG-IND.HTM<<<<<<<<<<<<<

Sincerely
Jo

Some boxes are empty in the table board ... if you know what to put inside,
be cool, send the missing data to me ....

Bye

I have dabbled (and written real programs that were useful to me, if not to others) in both. I found GFA easier, but I already knew how to program. I find STOS's development environment annoying: for someone learning to program that's probably not too critical and being able to get immediate output from STOS is nice, but once you get to programs of more than half a screenful or so, it gets very annoying. It's much worse even than the spectrum.

There's also hisoft basic; it's got a nice editor and an immediate window as well.

>>GFA, at least at the rudimentary level. When I bought STOS, I also liked
>
> Actualy for what we are talking about, an 8yr old learning, then ALL

Yes, the language itself is not sufficiently different to have any effect on someone just starting, but the environment is very different.

That's right as it turns out - Mike mailed me to confirm this. A 4Mb VRAM board that connects to the processor direct.

I'll presume that this overcomes the usual bandwidth restrictions on video, else it would be incredibly slow...

The tar-binary from the TAF distribution doesn't work properly, it's possible
that you have this version. The one in KGMD works fine.

1981. HD/Bigdos questions

Newsgroup: comp.sys.atari.st
Date: 1997-05-06 00:00:00 UTC
From: Mark Fassett <mark_fassett@intuit.com>
Message-ID: <336F64D5.18DE@intuit.com>
Source record: 122795
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Greetings..

I want to use a PC hard drive (Jaz) on my Falcon for backup, and then backup offline to SCSI DAT on my 486-33. This would allow me to keep making music while doing backups/archives. Could someone help me understand more about how this is done?

I understand I need a utility called Bigdos, and I also know I need version 6 of Bigdos for use with the Falcon. Great.. but how exactly does it work? Do I need to repartition any drive I want to have recognized on the PC using Bigdos (I have HDDRIVER version 5.XX)? Are there any problems moving data from a drive that was partitioned using Bigdos to one that wasn't on the same SCSI chain? Is a Bigdos partition compatible with Cubase Audio Falcon?

Where can I get a copy of Bigdos 6? Uwe only has version 8 on his web site from what I could see.

Finally, does anyone know of a reason why a backup to SCSI DAT and subsequent restore would not work when transferred to the Falcon? Obviously the backup software will only be PC based, I realize I'll always need a PC for restore, but other than that?

Any answers will be appreciated.

-Mark

1982. HELP! Problems with Calamus on Falcon

Newsgroup: comp.sys.atari.st
Date: 1997-05-06 00:00:00 UTC
From: Bertil Persson <pbertilp@algonet.se>
Message-ID: <Pine.GSO.3.96.970506224035.16312A-100000@aristotle.algonet.se>
Source record: 122796

I have got problems with Calamus 1.09 on my Falcon.
It has worked fine until now.
Suddenly it claims that it can`t work under "this TOS-version"
which is 4.02.(I haven`t changed it ,it`s the same as it always been)
Under MagiC 4 it will load,but not under normal TOS which normally
is better for the program(I have tried whith a clean setup)
Does anyone have any suggestions?

Bertil Persson

: implemented AFAIK.

Yep, fonts worked great, although I do have one reservation about it vs.
CAB - with CAB, you could make a font italicised or bolded, whereas with
WenSpace, you needed an italicised font or bolded font for italics or bold.

Magic 5, CAB030, OVL v1.25 and STiK v1.12 here and things have started to fly along. I'm not sure if it's because of the time of day hat I'm trying though.

Trouble is, I've also just grabbed Newsie v0.74 and I still get a Magic crash when trying to get mail from my mailbox and I still can't get my login name to be recognised unless I call myself celerypatch@celerypatch.compulink.co.uk - then the bombs come immediately after I discover there are 4 EMails waiting for me...

John R - do you have any idea about this?

Say...where can you find Shocker 2? I've been looking for it after
reading the review in ST Format but no dice.

BTW, if you have a color monitor you owe it to yourself to get the
Sebra emulator and mono games. They are so awesome, really reminds
me of the old black&white Mac games I played in high shool(well
that's all they had at the time). :)

Sorry to ask, but is your soundblaster a "true" creative labs soundblaster or is it a soundblaster compatible? I had a logitech soundman that was supposedly soundblaster compatible, but I could not for the life of me get it to produce sound through Pacifist.

I finally went out a couple of weeks ago and bought a creative labs soundblaster and was rewarded with instant sound from this great ST emulator with no tweaking of IRQs, etc.

From: Bertil Persson <pbertilp@algonet.se>
Message-ID: <Pine.GSO.3.96.970506224339.16312B-100000@aristotle.algonet.se>
Source record: 122814

I have a problem with Logic on my Falcon.
The problem is that that the program most of the time
says that the key doesn`t respond.
If I take the key out and plug in to my STE and then
put it back on the Falcon(of course with the computer
off)then it works until the next time I put the computer
on and try to load the program,without having even
touched the key in the meantime
Does anyone have experienced the same problem?
The key works fine on my STE so there should be no problem
with the key itself.
Is it some uncompability with the Falcon or could it
be that the cartridge port is damaged and in that case
is there a simple way to find out?

Would be grateful for some help.

Bertil Persson

2001. Hold And Modify

Newsgroup: comp.sys.atari.st
Date: 1997-05-06 00:00:00 UTC
From: bchermma@bluffton.edu
Message-ID: <862973106.15297@dejanews.com>
Source record: 122815

I own a Amiga 600 and have a freind who owns an Atari 1040 STE. We often like to compare our systems, not as compitition, but mearly for observation, for we respect the technology that went into both. Anyhow, I was wondering why he has to suffer with crappy GIF and JPG images. Every veiwer I have seen for the STE so far has only utlized somewhere between 16 and 32 of the X-thousand colors that are available. On my Amiga I have what is called Hold And Modify which does this cool little trick that somehow lets the Amiga display a ton of colors on the screen at once (I do not have the exact numbers here with me). So now I question: Why arn't there programs that do this on the STE? It has to be possible since I have infact seen mani-colors on screen at once in the Demos for both his STE and even my Atari 8-BIT! Is it that the Demo creators never use there talents for anything else or what?

Thanks!

:) I admit I don't have the "latest" version, I think I am up to
V6 of HD Driver. On my "flakey" Falcons (note the "s"), I have always
had problems with IDE drives and HD Driver where SCSI Tool always
seems to work fine. It is not just one machine, nor is it the same
IDE drive. The machines range from box stock, latest model to "bread
board" looking Falcons. IDE Drive size ranged from 340mb to over 2gb.
HD Driver did not partition the drives properly in each case, if it
completed the task at all. Even partitioning the drive with SCSI Tool,
then installing HD Driver did not work, usually thrashing the boot sector.
My latest drive, a 2.5" Toshiba 1.06gb drive is working fine with HUSHI
and SCSI Tool partitioning.
```

On my ST/E's and TT HD Driver works fine, however Syquest carts
formatted with HD Driver won't interchange between the other machines
running HUSHI, so I dropped it completely and use HUSHI on all of them.
The removable carts work on machines ranging from a 1040ST, TOS 1.02
and ICD Link II to a Mac running MagiC Mac.

Just my experiences,

Mike

I agree completely!!! But there is a color version of Shocker 2...I've
played it and it's freakin' awesome!!

My mother (yes, really!) is the one who has it...I believe it came on a
disk when she sent away for the code book. (the disk also contained demos
of the two NOBIs, which also rule!)

As soon as I can, I'm gonna try and get all three...are you sure the address
you posted is still valid??

2008. One last question about my STf

Newsgroup: comp.sys.atari.st
Date: 1997-05-06 00:00:00 UTC
From: jdbowen@mindspring.com
Message-ID: <5km9fl$sas@camel7.mindspring.com>
Source record: 122908

Thanks to everyone with the keyboard advice for my beeping STf. It stopped beeping, thanks to a new keyboard (by the way, Daniel Fangmann gave me a good price and shipped it quickly - highly recommended!)...

Unfortunately, it doesn't like the new floppy drive I installed into it. I'm putting in a Sony 720k drive, the switch labeled D/S is at 0 (as per the ST FAQ), and when I boot it up the drive light comes on and never turns off. Eventually the BIOS TOS comes up and when I try to access the A: or B: drive, it comes up with the 'Can't access drive, check connections' and when I try and format a disk, it comes up with 'disk is read-only, please correct' and then 'format error' after I click Retry. Again, the whole time the computer is on the drive light is on but it just won't recognize the disk in the drive. The person who sold me the drive said it was 720k (no drive size markings on the drive) and said it was working when he pulled it...

Anyone have any suggestions? Reply here or send email to jdbowen@mindspring.com

[snip again]

So what's the difference between Notator and Notator Logic? Right now I'm
using a STe running version 2.0 (hacked... grumble grumble) of Cubase.
From what I've been reading, though, I *think* I want to switch to Logic,
but I can't see myself shelling out damn near $400 for it. I could swing
the $250 Toad wants for Notator, but am I missing anything essential by
not going to Logic?

My current MIDI setup:

1040STe (TOS ?.??) running Cubase 2.0
Ensoniq EPS (master controller)
Yamaha DX7
Ensoniq Mirage (rack)
Korg EX800

plus whatever other bits and pieces come along :) I'd really like to be
able to record MIDI data from both keyboards at the same time, and tweak
everything (MIDI datastream, sysex, samples) from the computer. I'm
recording to an eight-track tape machine, so I'll need some kind of tape
sync support also.

I could probably answer these questions myself, but piracy sucks.

s> memory expander board they make, everything is fine.

I was wandering around the London Atari shows and overheard a conversation between Brad Koda and a couple of the PARX guys who were over from France. Brad seems to be aware of what's going on.

From what he said, the agreement with Atari on the purchasing of TOS (buying it from them rather than licensing it in the way that CLAB have AIUI) is basically complete. When the first approach was made some time ago a value of $15,000 was put on the purchase, which was not viable for the purchasers at that time, but since then the figure has reduced (possibly to zero, but I didn't catch that bit) sufficiently for it to go ahead now.

The hold up appears to be that they are looking for complete clearance from Digital Research/Xerox so that there can be absolutely no question of legal problems with ongoing use and DR/Xerox coming back on and demanding license fees or whatever. That sort of issue - remember UNISYS and LZW compression.

Wrt the possibility of Wizztronics being able to sell TOS on further or to license it to third parties, the answer is unknown. The problem with ownership and sale of TOS that we have had over the last year or so is down to the fact that this sort of issue wasn't resolved upfront in the first place, but TOS was more of a live product back then so it's understandable that it wasn't cleared up. Hopefully it'll be less of an issue now with the life of the product having almost expired, but this is the kind of thingthat keeps lawyers in a job, so it may be some months yet.

Brad has just asked people to be patient and to let things run their course in the knowledge that negotiations are continuing. It sounds as if no news is good news...

2015. PacifiST Sound problem

Newsgroup: comp.sys.atari.st
Date: 1997-05-06 00:00:00 UTC
From: Jeff Hutzul <hutzul@sk.sympatico.ca>
Message-ID: <336ED164.44C8@sk.sympatico.ca>
Source record: 122915

Hi...I'm having problems with the sound on the ST emulator....my soundblaster is at 220 and Pacifist thinks its at 240 thus my sound is screwed....any way to fix this?

Thanx in advance.......please mail me

Jeff

2016. FS Atari UK Only

Newsgroup: comp.sys.atari.st

The following is up again for sale..... This time the stuff is on
OFFER,but i will only consider Serious Offers. If any one offers
silly prices then i wont bother replying to them..

All offers will be done by 1st.. 2nd.. 3rd etc and when i reply to
you i wil quote a number to you so as you will know wether you have
1st or 2nd refusal etc..... Buyer to pay POSTAGE..

520 Ste upgraded to 4 mb,mouse,joystick.. 75 ukp ono

520 STFM only with half meg ram.. 20 ukp ono

Golden Image external drive 20 ukp ono

CD-ROM Drive,this one plugs into the catridge port of the Ste,comes with
all cables,manuall,and interface.Just plug it in,and your then ready to
play.Will also play sound CD's. The Cartride alone costs 60 ukp..
70 ukp ono
Gemini Atari CD...2872 files for atari st,tt and Falcon. 10 ukp ono
Atari Mega Archive CD...A total of 1.9 Gb of Atari software... 10 ukp

Supra Fax Modem 14400 BPS... 30 ukp ono

Atari SM124 Hi Rez Monitor,No screen burns. 40 ukp ono

Amstrad Colour Monitor,converted by me to use with the Atari
excellent picture Low And Medium Rez.... 40 ukp ono

540 Mb Hard Drive,with cables and Link 2 Interface,no bad sectors,only
1 year old,just plug it in and play. I can leave loads of software on
this which will include Magic4/NVDI/Kobold/Lattice 5.6/Ease Desktop/
Pagestream 2.1 uk/Diamond back 2/Diamond Edge and loads more,to many to
mention here..... 150 ukp ono

Seikosha SL-96 Colour 24 pin,dot matrix Printer only 1 yr old,comes with
all cables,spare colour ribbon etc.... 90 ukp ono

Loads of cover disc from ST.Format...ST.Review....ST.User...offers

Games all boxed and with Manual's..20 ukp ono
Corruption
Strikefleet
Space Quest 2
Kings Quest 1
Bequest
Loom
Manhunter 2
Epic

Falcon
Zool
Sundof The Frozen Legacy
Galdregons Domain
Chronicles of Omega
Operation Neptune
Star Trek

>unpacked it yet or played with it.

Yes, I downloaded it too. It's a selfextracting archive serving
nothing but plain white on my little screen. (anybody knows why
it didn't unpack?)
Then I tried loading it in my DCX220C.PRG which was able to unpack
the archive. The new name of the program is WENSUITE (web, email and
news suite?)
You can now actually select and view the mail and news windows. Many
little bugs were taken out. Now the buttons at top do what they are
supposed to do.
A ppp unit is implemented, but I could not get it to work, the
program bombed away after connection.
This program is very fast, but it still is not able to show forms and
tables the way it should be. Also no animated GIF's nor framesupport.
You still cannot reach the available fonts.

I would say if they sell this program commercial the demo should be
perfect. At the moment I don't see a reason to buy this program as it
doesn't perform as promised.

If you've got access to Papyrus, that will read First Word Plus files
which you can then export as RTF and read in almost any PC word
processor.

Today I have had a ppp contact with my provider via the built in ppp
layer. However I was not able to fetch webpages. Message: DNS failed
or something alike. And I only succeeded once. The other tries ended
up in disconnections.

I hope that you compare the look of your tables and forms
with a real browser (NETSCAPE for example). It may be possible that if you
designed your pages with CAB <=1.5 the wrong output may be the exact
interpretation of your HTML faults ;-)

Animated GIF and framesupport are planned for v2.0.
None of them is essential for every day use, but the integrated PPP Layer
is much a concern.

OXO told that updates were free and automatic via their website.
If it's still true that could be a plus.

2024. Using magic with PaCifiST

Newsgroup: comp.sys.atari.st
Date: 1997-05-06 00:00:00 UTC
From: gregory_ford@hotmail.com
Message-ID: <862491277.11177@dejanews.com>
Source record: 122924

Using pacifist 0.43 for dos (with TOS 2.06) is it possible to emulate magic 2; I have the magic 2 files and need a way to emulate the auto directory system (containing magxboot.prg) is this possible?

I've tried using gemulator classic but failed miserably - has anyone had success with either of these emulators?

Thanks.

AFAIK, the C-Lab Falcon Mk II did have internal SCSI rather than IDE due to
its extra speed. I could be wrong, but...

Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I'm very pleased to ascertain the enthousiasm for my first announcement
about the ultimate list for atari programs available to download from
web pages ...

Please, go to see by yourself what is becomed this page ... it's
growing up from day to day and I'm only waiting for people who don't
yet have send me their program to put on ... english programmers are
certainly not the least ... far away from that ...

So if you have developped any kind of program for the atari platform,
don't hesitate anymore to communicate the following data ... I will
put them as fast as possible on the page (within two days ...)

Program NAME.
Author NAME (you, little genius ...)
The URL ADDRESS from where we can download this (these) little marvel.

Thank you to everyone who has sent datas about programs ... even if
they have not developped themselve the program ... they have found it
somewhere in the gigantic web ...
thank you for your continuous collaboration ...

How, let's go futher, this list must become THE ULTIMATE ATARI PROGRAM
LIST available on the web.

>>>>>>>>>>>>http://www.ping.be/~pin10575/PRG-IND.HTM<<<<<<<<<<<<<

Sincerely
Jo

Some boxes are empty in the table board ... if you know what to put inside,
be cool, send the missing data to me ....

Bye

Hmm, I wonder how many people have tested it with Magic. I use Geneva and
did not have the screen draw problems you describe. I also have NVDI
installed. I have run it in monochrome mode as well as 256 color mode, it
worked fine both ways.

Anybody have success under Magic?

Photochrome could display many colours on the STE, I forget the exact
specification, but it is in the thousands.

AFAIK, it does not display GIF/JPG files, you have to convert these to
another format before viewing.

Speed of Light was another viewer that looked good, anybody know what it's like?

What about Spectrum 512, 512 colours on the screen & converters are
available for GIF files.

You have to create a drive with DOS compatible partitions. You can do
this either on the PC, e. g. with fdisk and format (not very much fun to
use) or with HDDRIVER 6. With HDDRIVER 6 you can create DOS compatible
partitions on the Atari the same way you get TOS compatible partitions.

> there any problems moving data from a drive that was partitioned using
> Bigdos to one that wasn't on the same SCSI chain? Is a Bigdos partition compatible with
Cubase Audio Falcon?

There is nothing like Big-DOS partitions. There are only TOS compatible
partitions and DOS compatible partitions. Either you have a drive with
TOS compatible partitions or with DOS compatible ones. You can't mix
these partition types. As far as I know Cubase doesn't support DOS
compatible partitions.

I tested it under MagiC in 16 colours. Looked fine and I can't see why
MagiC would cause any problems with the display.

:) It's pretty fast (by the seat of the pants feeling). 640*480 24bit
is slightly slower than a stock Falcon running NVDI, same res in 256 Color.
The nice thing is that there is no noticable slow down going to a
higher resolution even maintaining the same pixel depth. It is installed
on a 4mb Falcon, stock motherboard. Titan said my order has shipped
so that will all change this weekend:).

Only about the speed:). C-Lab machines are designed with Cubase Audio users
in mind, and Cubase for the Falcon only records through the SCSI bus.
It is to bad that they decided to hack the SCSI connector instead of
installing a standard headder.

Yes, you do need software...it sets the screen and disk drives up for the PC motherboard inside the SC, which talks via the DMA port.

I'll check to see if I still have a copy of this software...I sold my SC about a year ago.

Anyway...what you have is a modified AMD 8088 (or 8086?) that can run MOST 286 applications at 16mhz...including Windows 3.0 in protected (no multitasking) mode. You might even be able to run 3.1, but I've never tried. You'll also want the super charger version of DOS, althoe you can use most any DOS version provided you install the correct ATARI hardware drivers. This box can have up to 1meg if internal memory which can be used under DOS, or you can set it up as a RAM disk for the Atari. You can also build DOS FAT RAM disks in Atari memory for the PC to use.

It's not a bad little DOS box at all...
Not to good at windows in my opinion.

You'll have a hard time getting fancy game disks to run...
Sound isn't supported...
You get CGA 2 or 4 color video on a color monitor...
You get a CGA hercules mode with a mono monitor.

With the SC 1.5 software that runs on the Atari itself, you can easily switch between PC mode and ST mode.

Hope this helps...
Brian

>Demos for both his STE and even my Atari 8-BIT! Is it that the Demo
>creators never use there talents for anything else or what?

512 colour for an STfm or 4096 for an STE is usually the maximum
number of colours supported. This is done by repeatedly changing the
16 colour palette (multiple times per scanline). There is also some
software (Photochrome, by Doug Little) which uses lots of incredible
techniques to cheat and get a form of 'super hold and modify' mode,
which can display 16384 out of 32768 colours on an STE, or ?? out of
?? on an STfm...

Take a look around for Spectrum 512/4096, Quantum Paint (4096 on STfm)
- art packages for these modes, and Photochrome (v4?), the best picture
viewer...

Testers Needed for AUTOVIEW

This is a small program originally to enable the AUTO loading of
CYBER.SEQ files, an ideal use would be some sort of Intro ?

Features...
<> Ability to play Cyber SEQ
[] Packed or unpacked 6 Types of packers Supported
[] Loop or one play

<> Load and play Chip Music "OPTIONAL" alongside the Cyber.SEQ
[] Packed or unpacked 6 Types of packers supported
[] 21 Types of Chip Supported

<> Load and play Sampled sound..alongside the Cyber.SEQ
[] from 6.5 Khz Up to a Luverly 50 Khz
[] Mono or Stereo Output
[] Signed or
[] Loop on/off

<> Set Chip AND Sampled sound, Program then detects best machine and
plays appropriate sound file
<> Auto detects Falcon and NOT play any set Chip :)
<> Half meg compatable
<> Fully Configurable
<> More File type to follow if Interested.
<> FREEWARE

Visit my web page to download the test version that is only 79k and
that inludes a sample CYBER.SEQ :)

Please respond with your Computer configuration..

Cheers !ynoT (ATARI Programmer)

>specification, but it is in the thousands.

Photochrome CAN display these colours on a STe AND on a bog standard
FM....
Look at this issue of ST+ Diskmagazine,(Issue 16) there are (256
colour) photochrome pictures for viewing in the actual diskzine shell,
on a STe or a FM (The diskzine shell and built in 256 Colour picture
displayer for STe or FM all programmed in STOS! BASIC)

>AFAIK, it does not display GIF/JPG files, you have to convert these to
>another format before viewing.

Photochrome will load GIF TGA IFF and other formats (can't recall
from memory) and will convert them, giving the user many converting
options,
Then whehn it displays the picture you have the option to save it, it
will save it in PCS format exactly the same quality as you see on
screen, quite an amazing bit of software,
Do all the above on an old ATARI FM and you see what I mean :)
>
>Speed of Light was another viewer that looked good, anybody know what it's like?

Excellent for viewing all manner of pictures, the save option allows
you to save in 16 colour formats... obvious lack of quality when
coloured down though,

On your Amiga A600, HAM gives you upto the full pallete, in other words,
4096 colors. Pretty cool trick, really. Super HAM (on AGA machines like
the A1200) gives 256,000-I believe...

Anyways, tell your friend that he can use Spectrum 512 to get 512 colors
on-screen or even better yet get PhotoChrome v4.0 by Douglas Little of
Black Scorpion fame... It will take a GIF (and other formats) picture and
convert it to PhotoChromes own PCS format, that enables an STe to display
19,200 colors out of a possible 32000... Once he sees the PCS pics., he'll
never want to go back. Also, some of the Apex media viewers will work with
his STe. The Targa viewer will allow him to double-click any .TGA file and
see it in at least 4096 colors (once he has installed it as an application,
which is a snap) Great software for a great machine! Have fun...! :)

Tables are definitely not displayed correct. Especially nested tabels are a
great mess. And even simple tables are not really OK (especially when compared
with other browsers).

>>I would say if they sell this program commercial the demo should be
>>perfect. At the moment I don't see a reason to buy this program as it
>>doesn't perform as promised.
> The reason is that it is compact, Very fast(which for a web browser,

It's fast, that's true. But besides of that, nothing else is really
finished yet (in the HTML parser). <pre> doesn't work, many HTML entities
(such as ü) don't work, many other things don't work either. Ever tried
to scroll a Wen.Suite window in the background if it's partly covered by
other windows? The dialogs seem to be displayed only correct on Falcon TOS
or MTOS. Under Magic the border of many objects in dialogs are missing, so
it's not very clear where you can click (maybe this is the reason, why
some people have difficulties to find out where they could set the fonts),
etc...

The later "Clickies" viewers, also from Doug, and given away on an ST User coverdisk, are even better than Photochrome. He did something clever with the colour tables (so I'm told) and there is virtually no discernable flicker, unlike Photochrome.

Pity he never had time to incorporate the better routine into a Photochrome v5. He once told me he had vague plans for a "Super Photochrome" with even more(?!) colours, something like 32,768 from 262,144 on an STE, and maybe higher resolutions and overscan... Oh well. At least he's working on that amazing Apex Alpha.

Try removing the JPEG.OVL. I don't thing CAB 2.0 needs it, and it may not even use it. My theory is it is getting in the way for you. When I tried the CAB 2.0 demo I moved the OVL that interfaces with STiK into the demo's fodler, but not the JPEG overlay, and everything worked fine.

True, you can still run out of memory and have some graphics not appear, but this should be rather uncommon. If you aren't getting any jpgs to display then something is certainly wrong.

Maybe you'd like to try STinG as an alternative to STiK ? If STiK is the
problem, STinG should solve it too. Note however it's in beta state still.

That's the total cache, but you may not have that much memory. On the
same side of the entry box there is an entry for space reserved for
other programs that tells CAB to save this much memory for programs it
needs to call. If you don't make this large enough, there will be no
room to load the editor. I have a 4096k cache and 256k reserved for
other programs.

Since I only have a 4 meg machine, CAB would use all available memory
for the internal cache and be unable to load any program without the
reserved space.

> Karsten

Well, I've done a bit of research about these two utilities:
TWP27.APP is now TWP28.APP and is used to convert Word Plus 4/5 or
That's Write docs.
WP35.APP is used to convert the older (First) Word Plus docs.
Author of these apps is Robert Best. E-mail him at:
rwbest@worldaccess.nl
He can give you more information.

Thank you for your reply.. I appreciate it. It seems I'll need to
upgrade from HDDRIVER 5.xx to 6.xx from your message. No problem.

But what you didn't mention is how I can get Bigdos 6 which, if I
understand correctly, is the correct version to use with the Falcon.
Any ideas?

Thanks..

-Mark

2074. ATARI ST STUFF FOR SALE for whatever you care to pay

Newsgroup: comp.sys.atari.st
Date: 1997-05-07 00:00:00 UTC
From: Karl Zosel <karl.zosel@skynet.be>
Message-ID: <01bc5b15$d8f35dc0$220deec3@skynet.internet>
Source record: 122774

Hello,

I sold my ATARI ST about four years ago but I still have a lot of stuff
lying in the attic. If you care for anything in the list below, and you
live in Holland or Belgium, send me an email and maybe we can get in touch.
I don't want to make a lot of money, so if you make a reasonable offer for
one of the items below, or for the whole lot, then we can try to meet. I
live near Antwerp, Belgium, but I travel a lot in Belgium and Holland.
I tested all the software some time ago, and I trew away one game because
it didn't work. Nevertheless, I can give no garantees.

GAMES: all in original package, incl. manuals, disks, ...
GOLDRUNNER 2 (Microdeal)
GOLDRUNNER 2 SCENNERY DISK (Microdeal)
F-19 STEALTH FIGHTER (Microprose)
NIGHTRAIDER (Gremlin)
FALCON (Spectrum Hollobyte)
FALCON MISSION DISKS VOL1 (Spectrum Hollobyte)
R-TYPE (Electric Dreams)
SDI (Sega-Activision)
STELLAR CRUSADE (SSI)
SILENT SERVICE (Microprose)
POPULOUS (Bullfrog)
WANDERER 3D (Pyramid)
STARGLIDER 2 (Argonaut Software)
SPACE HARRIER (Elite)
OVERLANDER (Elite)
METAL MUTANT (Silmarils)
GOLDRUNNER (Microdeal)
ELITE (Firebird)
THE EMPIRE STRIKES BACK (Domark)
STARGLIDER (Firebird)
STAR FLIGHT (Electronic Arts)
OBLITERATOR (Psygnosis)
BARBARIAN (Psygnosis)
TERRORPODS (Psygonisis)
ELVIRA (Accolade)
SDI (Mindscape)
FOFT (Gremlin)
DUNGEON MASTER (FTL)
SUPREMACY (Virgin)
SHOOT-EM UP CONSTRUCTION KIT (Outlaw)

GAMES without manual and package:
Megalomania

Powermonger
Populous 2
Jimmy White snooker
Olympic Games
Sensible Soccer
Chaos Strikes Back inc utility and editor.

MAGAZINES ATARI ST FORMAT
nrs 36-37-38-39-40-43 (including disks)

OTHER SOFTWARE:
GFA-Basic 3.0 the complete package
Utilities by Michtron (Microdeal)

HARDWARE:
A joystick (1 button)

BOOKS:
Het complete Atari St boek (Dutch)
Programmeren in GFA BASIC door Wim Beerens. (Dutch)
ATARI ST PROGRAMMIERPRAXIS TURBO C (German)
ST BASIC SOURCEBOOK AND TUTORIAL incl DISK(English)
ATARI ST INTERN by Data Becker (Dutch)

That's it.
Karl

2075. Help with ATARI 1040 STFM

I have an ATARI STFM circa 1989. The Atari sc1224 monitor is kaput. When I turn it on the on light flicks on and off like it's trying to start but can't. I assume this is a power supply problem? Is this fixable? and if not,
(1) What other monitors are suitable?
(2) what lead do I need to connect to a TV. (I am guessing an RCA-RHF?)

Thanks for any ideas

s> you know?

All the info I've ever seen and the discussions I've ever had indicate that this is the case. I've got TOS 2.06 and TOS 3.01 machines so can't say I know for sure, but I'll send you a text file I've got which relates to fitting HD floppies to STs, dating back to 1991, which makes the explicit statement about TOS 3.05. I'll mail it to you.

(I've mislaid my copy of Mark's A-Z book, so I can't use it to support this statement atm...)

OK - looking INTO the male plug on the ST:

1 2 3 4 5

6 7 8 9

1-Up
2-Down
3-Left
4-Right
5-not connected
6-left button
7- +5v
8-Ground
9-right button

j> it didn't unpack?)

I d/led the English version of 1.7 from Joerg Spilker's BBS. No trouble unpacking but I'm deeply disappointed with what I've got.

The menu seems to be drawn about 3 times, the screen re-draws are haphazard. The screen ends up in such a mess that I am unable to use it.

I am using STM/MagiC/SM124 - anything wrong with that?

j> I would say if they sell this program commercial the demo should be

Hmmm ... never mind about "as promised", it doesn't even "perform" for me.

For Sale

Atari Revolution Handbook, by Don Thomas. Intro by Bob Brodie. This is a real collector's item and a piece of Atari history. It's also a nice introduction to the world of computers in general, and the ST specifically. Would make a nice gift for a new computer owner. This copy is in mint condition, and autographed by the author.

$8.00 + postage from California, or best offer.

Credit card/e-money accepted, enquire for details.

Hi,

I setup STinG last night. It took a little while, but not to difficult:).
One problem I encountered was my RESP string is to long for the dialer scr
window.
I shortened the FIND term and it apears that RESP still worked. After getting
that going, STinG RECV'd the IP# ok. I am able to ping other servers so
I know that I have a slip connection, but Newsie (V.72-V.74) and CAB (1.5/030)
cannot resolve the DNS. I must still have a configuration item set wrong.
The other item I couldn't find in the docs was how to set the port speed. It
does say that it can be done, but dosen't tell the syntax. The STick term
dosen't work. It does indeed look very nice. If I can't resolve my configuration

in the N/G, I will email the author. He is going for his PhD, so I wouldn't want to bother him to much:).

This sounds like you need to unplug the data cable from the drive and rotate it through 180deg, this is often needed when installing new drive mechs. You might need to cut the locator off the plug to allow the connector to go back upside down.

Speak to 'ya later!

My system has 20 megs, so setting the cache to 4096k should give me the
full 4096k. The "Keep free" was set to 256k, but I just changed it to
512k and it didn't make any difference. I have no problem loading the
editor and editing the e-mail I want to send. The problem comes after
exiting the editor and getting the pop-up and clicking on "send", I
then get the message "Transaction Failed."

I had no problem with the demo of 'Running'. I simply dearchived it,
rebooted to give as much ST RAM as possible (I have 4 mb ST-RAM, 10 mb
Fast-RAM), loading next to nothing other than what I needed, and it ran
great (this is the two archive version of Running we're talking about,
right?)

2094. ISP ACCEPT-ENCODING/ CAB/STiK Problems

Newsgroup: comp.sys.atari.st
Date: 1997-05-08 00:00:00 UTC
From: csilver@kendaco.telebyte.Spam.This.com
Message-ID: <5krone$9mb@news.telebyte.com>
Source record: 122683

Hi All,

Well, I'm trying to do a little detective work on finding ISP's that use ACCEPT-ENCODING protocol that causes the "406 ERROR no acceptable objects found" for STiK/ANYTHING that CAB uses for a TCP/IP stack. I thought this would be easy, but not so. For example, I followed the domain.txt trace of www.emulators.com and found links to www.isc-br.com, www.rahul.net, and www.nwnexus.com all of which loaded find with CAB/STiK. Would an ISP use ACCEPT-ENCODING protocol for some site's and not others? I don't think so.

The only ISP that *always* produces the "69 byte error" are MSN.NET/COM sites. No mystery there! Such a site is http://slate.com/

The nasty of nasties is http://www.sidewalk.com/ a Seattle MS entertainment info site.

I have two reasons for trying to find such ISP's.

1) Atarians should avoid these ISP's as your web page would be unviewable.
2) All those trying to build TCP/IP stacks for CAB *SHOULD* test their connections to these ISP's protocols.

For whatever reason, it is becoming more common for ISP's to use ACCEPT-ENCODING protocol software. I have no idea if WEBSUITE(was Webspace) and their ppp connection can view these sites as the doc's say the demo version has the images turned OFF ;(

If anyone finds ISP's in there area that cause problems, you might warn CAB users so that they don't pull out ALL there hair]:^)

Surf'in due South,

Charles

P.S. Special thanks to Neil Roughley.

Has anyone got the May 1997 issue of Sky International magazine? Nestling among the (decidedly dodgy) small ads section there is a half-page colour ad from a company called, LEAVE MY WIFE ALONE DESIGNS, or something, announcing a new range of T-shirts. They appear to be based on logos of things which were all the rage during the late '70s and early '80s. It stood out a mile - read on to find out why.

In the photos, you can see close-ups of the designs, which include the Space Invaders logo, the CHOPPER (you know, that crazy bicycle with the long handlebars and large back wheel) and... you guessed: the Atari logo! There is also one with the original Atari Asteroids arcade game logo. They look to be very good quality, I mean, it's the *proper* Atari lettering and Fuji symbol. Those of you who have seen how awful the Fuji symbol looks when even slightly out of proportion will really appreciate this.

The ad is for mail order but also states that the designs are available at "leading record stores". Check it out.

Hi

I downloaded Sting. It looks fine BUT, i didn't manage to work it
out. The documentation is a bit confusing. Things like DNS are not
properly mentioned. And a question. Do i have to connect with the
dialer or like Stik, can i use a terminal programm and enable Sting
later?

George

On Sun, 4 May 1997, Matthew Bloch wrote:

->* Notator; where does this come in the order of MIDI sequencers?

Basically, the top 2 Atari sequencers are Notator/Creator and Cubase. Its probably a toss-up as to which one is better. Then there are the latest versions of both, Logic and Cubase Audio/Score. Those handle digital audio in addition to MIDI and score printing. I doubt if the new versions work on a STe.

2103. FS: Atari/Lynx/Gameboy stuff, plus books

Newsgroup: comp.sys.atari.st
Date: 1997-05-08 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.050897.155322.64@wxs2-5.worldaccess.nl>
Source record: 122692

This is the May 6th version of the list of Atari stuff that I have
for sale.

ALL THE TITLES BELOW ARE ORIGINALS, PRE-PROD COPIES, OR EVALUATION
COPIES (so you might not be able to upgrade all utilities).
NONE OF THESE TITLES ARE PIRATE COPIES!

FIRST CATEGORY: GAMES FOR ST, WITHOUT MANUAL, WITHOUT BOX

Games with + are excellent games that I've played for hours and hours...

+Airball
Airball Construction Kit
Arena (2 disks, Psygnosis)
Backlash (Paul Woakes, Novagen)
+Barbarian (2 disks, Psygnosis)
Black Lamp (Firebird)
+Blood Money (2 disks, Psygnosis, bloody excellent game)
Brattacas (Psygnosis, classic hi/med res game)
Deep Space (2 disks, Psygnosis)
Extensor 3.3 (Tron-like game, monochrome only, by Golden Games, ancient)
+Formula One Grand Prix (excellent game, 3 disks, includes manual that you need
for the copy protection - passwords)
+Goldrunner II (boot/game disk plus data disk, by Microdeal, 2 disks in total)
+Goldrunner II Pete Lyon data disk
Goldrunner II some other guy official data disk
Jambala, the Seven Gates of (Thalion, DS disk version)
Jupiter Probe (legendary Steve Bak shoot-em-'up with Rob Hubbard Music)
The Killing Game Show (Psygnosis, 2 disks)
+Leatherneck (Microdeal shoot-em-up, really cool, you have to disconnect
printer to
get it to work, does not work on Falcon, alas)
Monster Business (platform game, Eclipse design)
+Obliterator (2 disks, Psygnosis)
+Prehistoric Tale (Thalion game, coded by The Lost Boys, platform thing)
+Return to Genesis (the first true horizontal smooth scrolling shoot-em-up by
Steve Bak, excellent graphics, great game)
+Revenge of the Mutant Camels, registered version for 1 Mb ST
Shaolin, Chambers of (Thalion, Martial arts game, 2 disks)
+International Soccer (Microdeal, I think it's the best soccer game ever on the
ST)
Spaceport (like Fort Apocalypse on the C-64, great concept, dodgily programmed)
ST Karate (great graphics, old karate game by Paradox)
Stone Age (really nice puzzle game by Eclipse, excellent graphics, DOUBLE

FORMAT, WORKS ON ST AS WELL AS AMIGA!!)
STrikey (Pacman clone by STRIKE-a-LIGHT, ancient)
Teramis, Leavin' (vertical scroller, shooting about spaceship, Thalion game)
Terrorpods (2 disks, graphically impressive, Psygnosis)
+War in Middle Earth (RPG "Lord of the Rings", *really* impressive, 3 disks, Melbourne House)
Warp (nice Thalion shoot-em-up, graphics by ES of TEX)

COSTS: Remember, no manuals and packaging. All I'll be sending you is the disks. I am selling all this stuff at 2.5 British pounds per disk. Refer to the end of this text for more details. This includes postage and packaging.

SECOND CATEGORY: UTILITIES

These are sold without manuals either, unless specified. All original stuff, no pirate stuff.

1st Word Plus, 3.20 TT (2 disks) *
1st Extra (1 disk, version 1.03, allows index/contents etc. for 1st W+)
Crypt It (old Tommy Software encryption thing)
Degas Elite (Batteries Included) *
Ed Hak (editor) *
FastCopy Pro 1.2 * (works on Falcon)
G.I.S.T. the Sound Tool
Desktop Butler James *
Imagecopy 2 * (2 disks)
Imagecopy 3 ** (3 disks)
Mortimer (desk thing by Omikron)
Mortimer Plus * (see above)
Mouse Tricks 2 *
Positive Image ** (2 disks, version 1.0, manual available)
Protext 5 ** (4 disks, and I also have the manual)
Spectrum 512 * (512 colour drawing program, regular ST only)
Turbo ST (screen speeder, ST only)
Universal Item Selector III
View II * (by DMJ software, good stuff)
Warp 9 ** (3 disks, version 3.81, best for ST)
Xboot 3.10 *

COSTS: The regular ones cost 2.5 English pounds per disk. Titles with one * cost 5 English pounds. Titles with two ** cost 10 English pounds extra. If you want the manual sent, that will count as one normal disk (2.5 pounds). The Do note: Protext/Le Redacteur manuals are big whoppers of things, so those will cost 5 pounds extra instead of 2.5.

Examples:

Protext costs (4 disks plus double extra = 4 * 2.5 + 10) 20 English pounds without manual. With manual, it costs 25.

Imagecopy 3 costs (3 normal disks plus double extra = 3 * 2.5 + 10) 17.5 English pounds.

Fastcopy Pro 1.2 costs (1 disk plus extra = 2.5 plus 5) 7.5 pounds.

THIRD CATEGORY: DEMOS.

This is basically a collection of demos that I have. The price varies per demo, and is given for each title. The price specified is in British pounds, so if you want to make another currency of it, check the "additional payment details", below. All demos are ST only!
!! These demos can only be fill-up orders, or orders if you have ordered more than 10 British pounds worth of the first and second category !!

BIG Demo (with handwritten text by ES of TEX, ST only) price: 2
Amiga Demo (ST only): 1
California Beach Girls (fantastic monochrome slide show of girls by the Denise Team. Classic old demo, requires DS disk drive, monochrome only!): 1
Thalion Sound Demo (a copy-protected rare Thalion sound demo, done in 1988, with Mad Max music. Never officially released. You can't put this in a PD library because it's copy-protected!): 2
FNIL (large DS disk drive demo by TNT crew): 1
TCB New Year's Demo: 1
Union Demo: 1
Cuddly Demos: With hand-written stuff by Nic of TCB: 2
Whattaheck Demo: With hand-written stuff by NIC of TCB: 2
Decade Demo by Inner Circle: With hand-written stuff by Griff of Inner Circle, final version of 12 sep 1990, STE compatible: 2
Syntax Terror Demo (megademo by Delta Force, compiled, made, finished and copies at the ST NEWS International Christmas Coding Convention in 1990, signed by New Mode, Slime and Chaos Inc. of DF!!): 7.5 *****
European Demos: (megademo of Overlanders, 2 disks, also finished and copied at the STNICCC in 1990, signed by all members of Overlanders): 7.5 *****
Dark Side of the Spoon (by ULM, megademo, with custom ULM label): 1
Lightning Demo (by pendragons, with handwritten label by pendragons): 1
Punish Your Machine (two disk demo, excellent, by Delta Force): 4
Ultimate Muzak Demo (by PHF), volumes I through V, five disks, only sold as a set, all with hand-written labels by Grazey of PHF: All five for 6
Ooh Crikey Wot a Scorcher (TLB megademo, excellent, signed by all members of TLB plus other participants such as Oxygene, Tyrem, Fury, Hawkmoon and Tanis of TCB!): 7.5 *****
Ventura Demo (2 disks, I think it's by ST Connextion, with hand-written labels by them): 3
Reality is a Lie: 1
Black and White: Rare Polish megademo, with hand-written stuff and pix by them on label: 1.
Colorz: By Haemaroids, hand-written label by them: 1.
Froggies over the Fence: Three disk "last of the true megademos", released september 1993, with custom Overlanders "Froggies over the Fence" graphic labels": 8 for all three disks.
Bedlam demo by Chaos: 1

Never + Forever Demo by STEW, GfA Basic megademo: 1
The Beginning of the Ending demo by Flexichron: Handwritten label by Offbase of Flexichron: 1.

The demos with ***** are kindof special to me, and I am not very keen on selling them because they're signed by old friends and all. So the prices are "STARTING BIDS", meaning that you can bid on them. The person who makes the highest offer gets them.

FOURTH CATEGORY: MISCELLANEOUS

ATARI ST CARTRIDGES

And then there's the "Multiface II" and "Ultimate Ripper" cartridges. I also have those. They're ST-only, NO FALCON COMPATIBILITY. I haven't got the manuals anymore either. If you're interested, email me with an offer (I had in mind about 10 British pounds each).

LYNX CARTRIDGES

The following Lynx games are available for 5 British pounds each:

(No manuals and boxes)

Ninja Gaiden
Rampage

I am willing to swap any of those for Battlewheel.

GAMEBOY CARTRIDGES

(No manuals and boxes)

The following Nintendo Gameboy games are available for 5 British pounds each:

Bubble Bobble (difficult to play, a real challenge)
Dragon's Lair (beautiful graphics, difficult to play)
Hyper Lode Runner (the classic game)

I am willing to swap any of these for that old tennis-game that was released for the Gameboy in 1989 or 1990.

BOOKS

Books in German:

Atari ST/STE/TT Profibuch (Sybex) THE programming bible, in mint condition. Asking price 25 Dutch guilders or 25 German marks.

Das Buch Zum Atari Falcon 030 (Data Becker). Asking price 10 Dutch guilders or 10 German marks.

Das Grosse ST Viren Schutzpakket (Data Becker) Originally with disk, but I haven't got that anymore. Asking price 10 Dutch guilders or 10 German marks.

GfA Basic (book by Frank Ostrowski, including disk). 10 Dutch guilders or 10 German marks.

GfA Handbuch TOS & GEM (GfA Systemtechnik). 10 Dutch guilders or 10 German marks.

Atari ST Floppy und Hard disk (excellent book, Data Becker, hardcover). 20 Dutch guilders or 20 German marks.

Das Grosse GfA Basic Buch (Data Becker, hard cover). 15 Dutch guilders or 15 German marks.

Scheibenkleister II (by Claus Brod, THE mass storage media bible, with disk). 20 Dutch guilders or 20 German marks.

Book in Dutch:

Programmeren van Basic naar C (Data Becker). 10 Dutch guilders.

If you're interested, please email me with an offer (please also mention the country where you live, so I can estimate the postage costs). ALL BOOK PRICES MENTIONED HERE ARE WITHOUT POSTAGE!!

- READ THE BITS BELOW!! READ THE BITS BELOW!! ------------------------------

ADDITIONAL PAYMENT DETAILS:

I would like people in Europe to pay in British pounds or German marks (German marks = British pounds multiplied by three). People from the Netherlands can pay in Dutch guilders (British pounds multiplied by three). I have to request people outside Europe have to pay in American dollars (British pounds multiplied by 2). No cheques, just cash or International Money Orders from the post office.
I don't like to receive any coins, so if you order for 7.5 or 12.5 pounds (or whatever other currency) then please pick another title and make sure the total amount is divisible by 5 (INT(x/5)=x/5). If you pay with Dutch guilders or German marks, make sure the amount is divisible by 10. If you pay in dollars, simply round off the amount to the next whole dollar and use US$ 1 bills.

GUARENTEE

I can't give any guarentees. Some of the games are old, and some of them have been sitting in my disk boxes for quite a while. All ST-specific titles have not been played since 1993 or so. I am not out to rip anyone off. I have been doing "ST NEWS" and have been doing (and will be doing) "Ultimate Virus Killer" for quite some time and I hope people know that I can be trusted.

WANT SOME?

Email your order and WAIT FOR CONFIRMATION (DON'T SEND ANY MONEY YET). The quickest mailer gets the first right on a given title. I'll mail back to confirm and then you can send off the dosh. I will despatch the disks by return mail.

>but they could not harm the character. Where did you get it?

The version of "Running" I had also worked fine on my Falcon, but you will
certainly want to get the latest version, "RunShare"... Its updated so much
I don't know where to begin. You can shoot the enemies, and they can shoot
you back now. Supports VGA and RGB (including a full-screen/no borders mode)
, saved games (multiple positions) that even "snapshots" the view you last
saw when you saved, multiple weapons, run/jump/slide/ your character, great
music/digitized voices (pick up a health pack-game says "no dope-no hope!"),
sound is very configurable (even supports surround sound!) and much, much,
more... If you are a Falcon owner, do yourself a favor and grab this bad
boy--you won't regret it! :)

>720Kbyte mode, I'm working on the HD mode though.

>It might be that the drive is a HD (1.44 Mbyte) type, where you have to do
>a couple of minor modifications in order to use it with your ST.

I tried turning the cable over, and it started working (accessing the drive, at least) - and the first time I clicked on the A:, it showed me the contents of the disk. Now, when I went to put the cover back on, it stopped working. I assumed the cover was somehow messing up the drive cable, so I fiddled with the cable - then it would access the drive, but no matter what disk I put in it would say "0 bytes used" and come up blank. Then I messed with the cable a bit more, making sure it was seated properly. Now it chugs along a little louder but has started giving me the 'drive not responding' error. I'm about to throw this ST out the window - are the STs picky about how the drives are seated or how the cables are twisted? I had to twist the cable upside-down (as per everyone's advice) to get it to acknowledge the drive at all.

And the kicker is the Sony name is on it but the sticker with the model number has been torn off (or fell off...)

From all that I've gleaned from it (I've been trying to set it up), this is one sweet program, supporting LocalTalk, LAN, MIDI, Modem 1 and 2, Serial 1 and 2, Ethernet, AppleTalk, and Centronics (Printer port). If you need some help with setting it up, make sure you read the file ESTABLIS.TXT. I've almost got the program going (I think). The only thing I kinda hope is done is perhaps some dox for DEFAULT.CFG.

Anyway, if I can help at all, let me know. (I don't know about the terminal to activating STinG problem) Of course, you could simply get in contact with Peter Rottengarter if you need help. :)

: Gracias.

Hola!

Tienes varias alternativas.

1.- Gemulator. Puedes encontrarlo en

http://www.emulators.com y creo que

hay una version limitada que puedes bajar. Solamente puedes usar programas
GEM. La version comercial es mucho mejor pero vale cerca de US$ 60.

2.- PacifiST. Es un emulador frances en el que puedes incluso usar
juegos... lo encuentras en

http://wwwperso.hol.fr/~gidouin/pacifist.html

Creo que es shareware o PD... chequea en el website.

3.- MagiC PC. Este es comercial y tiene muy buena critica en ATARI
COMPUTING, pero creo entender que quieres algo mas "free" :-)...

En los dos primeros casos necesitas una copia de TOS en archivo
(image), que la puedes obtener de cualquier ST, pero necesitas un programa
que la extraiga... busca en los FTP sites...

Espero que esto te ayude, solamente tengo experiencia con la version free
de Gemulator que instale en el PC del Laboratorio donde trabajo...
funciona bastante bien, aunque solo en monocromo y el selector de
archivos aparece confundido de vez en cuando, pero pude usar Papyrus. No
es lo mismo que usar mi FALCON, pero funciona! :-)...

Salu2

Daniel.

I think I need this, too. Is Bigdos6 a freeware/shareware programme?
If so, could anyone who has a copy please put it on an FTP site or
even the atari binaries group?

TIA,

Jim

B > The Atari sc1224 monitor is kaput.
B > I assume this is a power supply problem? Is this fixable?

Any electronics fix-it shop that I ever heard of fixes monitors.
Unfortunately, they mostly charge more to fix a sc1224 (or any other
small monitor) than it is worth. Going rate around here is about
$100US - and I see sc1224s for sale in this newsgroup all the time
for about $60US.

If you can get your buddy with the soldering iron to do it for
parts, it shouldn't be too bad, unless he is incompetent. We have
several dead monitors around here, several guys (including me) with
soldering irons and some experience. The dead monitors stay dead.
After we fix them, nobody wants 'em.

B > (1) What other monitors are suitable?

There is a Philips monitor that will work, and I am told that some
of the Commodore rgb monitors will.

B > (2) what lead do I need to connect to a TV. (I am guessing an
B > RCA-RHF?)

I guess you mean RCA-VHF. Yes, it should work on a STfm.

Try out if you also have the "lynx" command. Lynx is a text based web
browser. If you want to log into the directory /pub/atari on site
ftp.foo.bar you simply have to run

lynx ftp://ftp.foo.bar/pub/atari/

Lynx will log on the server and display the directory contents. Browse
through it with the cursor up and down keys, view the selected file with
<RETURN>. You can download files by pressing 'd'.

Once you have started lynx you can also simply press 'g' to connect to a
different server. Just remember that all ftp-URLs begin with ftp://.

If you don't have lynx ask your system administrator to install it. It's
available for almost any platform.

Ciao

Guido

2122. GEMulator ROMcard not recognised problem

Newsgroup: comp.sys.atari.st
Date: 1997-05-08 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.050897.211356.45@wxs5-6.worldaccess.nl>
Source record: 122711

Remember my problem? About two weeks ago, suddenly, my ROM card was no longer recognised. It was plugged in, but suddenly 'not running' was displayed. So I took it out in the end, but I utterly failed to get it working with a disk-based TOS.
People told me to have a file called "magic_pc.os" in the boot directory of drive C, but THAT DIDN'T WORK. I was really frustrated and I even got around to using the word "fucking", this to considerable dismay of one of the more innocent perusers of c.s.a.s. out there.
Well, this evening I checked out the EXE file. Yes, people, I want to scan all 550 Kb of the executable file to check for a filename that it *would* load, as opposed to magic_pc.os. As I had in the mean time found out, "magic_pc.os" worked for the demo versions out there, and possibly the versions sold as "stand-alone" thing, but certainly NOT for the program I was using, the software that came with the ROM card.
The solution, here it is ladies and gentlemen:

The filename should not be "magic_pc.os" but "magicpc.os".

Thank you.

This made me pretty happy. Now if only my girlfriend got back from her six week stay in Wales (we're currently in week #2) I'd be a lot more happy.

I need Software developers who can program highly advanced graphic programs.
The Software needs to run on Unix Workstations and Windows NT/95 environment.

It is not a one person project. You will be working with multiple people.
So you have to know(or learn fast) how to work in a team.
It doesn't matter were you live. 'Cause we can have contact through the Internet.

If you think you can do this, PLease ReMail this message and tell me something
about yourself and your work(not neccesary). And I will send you some more information.

Sincerely

Ruben Daniels

The CAD industry is a very delicate industry.
Everything has to be precies sometimes as precise as a 10th or 1/100 of a mm.
This is iin some case impossible to do with a computer cad program.

Companies that have these problems for instance people in the designing industry have to make everything perfect.
For them is it impossible and much to time costly to use a computer fo this purpose.

Well I have got the best thing for you.

It is an machine developed in Denmark.
There is still only one prototype of it.
It is a laser wich can scan any object and make it into a dxf format file.

Of course you can see that this machine has unlimited possiblities to use it.

We offer now, 'cause we still have to refine and test it, a free use of the machine.
The only thing you have to pay are the transportation of the object you want to scan to send to Denmark.

It has an accuracy of about 1/10 mm but if the machine is ajusted just right it cen be even more accurate.
In the future we expect it to be as accurate as 1/100 of a mm.

Of course the objects cannot be very large. If they are they must scanned in a couple of times.
Of course this is no problem.

It can save tens of thousands of dollars because else someone had to make it with the computer which is impossible to do with a precision of a 10th mm.

The speed of this machine is incredible of course you can control this but it can be done in 5 minutes. Of course the scan will be better if you let it take more time to scan.

Please remail this message for more information. Please tell me what kind of object you want to use it with etc. If you want to make use of the testing we will bring you in contact with the developer of the 3D laser.

When you remail lthis message please answer the following questions.

Thank you

- If this machine was brought to the market what would you be willing to pay for it?

$10.000 - $20.000
$20.000 - $30.000
$30.000 - $40.000
$40.000 - $50.000
Another value please type it yourself

- What would you use it for and what do you think it can be used for?

- Do you know people who could use this product? (Do you want us to contact them)

Sincerely

Ruben Daniels

I am not sure if this is of any use to you but here is a site where you
can
get all those systems! :^)
If this is no good, then I will send you the system disks you need.

Hi,

I don't know why you've troubles to extract the archive. I downloaded
the archive from the OXO pages with CAB) and hadn't any problems to
unpack the whole thing. One thing I've learn from my previous
downloads though. NEVER use the self extracting possibility. Use
STzip 2.6 or unzip 5.13 (part of the zip20 package) instead.

The 3 Stooges was never released for the Atari ST.

While I'm here: I have the Amiga version of the 3 Stooges on
original disks, but I want it transferred to the PC. Does anyone
have it already transferred to the PC and can mail it to me?
If needed, I can prove I own the original (I can give you a specific
word on a specific page of the manual, for example).

Thanks.

Hi,

I'm using on my TT a N.AES/MiNT/MiNTnet/gluestik setup. I never have
managed to get mailto working. Although I get the 'transaction
successful' message the mail isn't send at all. From what I've learned
from my previous postings about this problem I know now that cab.ovl
v1.18 gives the best results. All the other versions of cab.ovl gives
me a 'transaction failed' message.

Hi,

Form what i see in the group, Sting runs saccesfully on Falcons (not
all of them!!) but on Mega STEs (like mine) or plain ST, STEs nope!!.
On my STe it doesn't even access the serial port. Only ping and
traceroute make my modems light go on. Cab or Newsie cannot resolve,
and i get an error message, butmy modems light is off.
All i can say is good luck to the author!!

2151. Re: ST Informer-Refunds?

Newsgroup: comp.sys.atari.st
Date: 1997-05-09 00:00:00 UTC
From: stinformer@chatlink.com
Message-ID: <5kv20g$9id$1@news.chatlink.com>
Source record: 122539

===...In answer to all who have wondered what happened at ST Informer. First) Toad Computers withdrew their advertising support saying the Atari market was lost. Second) I found money tough to come by and got $42,000 in debt trying to keep STI going.

===...At the time of David Smiths inquiry, there was a request for a selling proposal from a group in the Kansas City area. Their attitude was to possibly continue publication. I told them I would not transfer the rights to the name and subscribers, unless refunds could be made to anyone who wanted it. They said that sounded reasonable. It is that information that I relayed to folks about refunds. Other than that, I have been offering software in exchange. I can offer Universal Item Selector, Universal Network and many PD Program disks in our library, as compensation for unfulfilled subscription. I have done several of those already.

====...HOWEVER, as we converse here, I am "dudeing" up our Web Site to provide Web Issues at that location on a paid password basis. I will be working on that for the next month, and expect to have something available to readers shortly. I understand my obligation to the reader and have NOT chosen to hide, but am telling folks that I intend to "Keep On Keepin On" (now that sale potential has fallen through), and continue with our news tradition. I have invited advertisers to participate with banner ads on each news department and review file to be posted. I will await their enthusiasm, but expect it to grow nicely.

===...FRANKLY, I do not have the funds to refund to everyone, that is why I chose to NOT cash checks sent to me and to return them to subscribers. The cut off point for that action was September 23, 1996, and I have not accepted additional funds since that time. That was the earliest time I KNEW that TOAD was not renewing their advertising and I could not possibly continue.

===...A&D Software featuring productivity software for Atari Computers is still a viable entity, and Tax Wizard II for the 1996 tax year was upgraded and shipped on schedule again this year.

Thanks for the URL. After reading some of the replies about the game, I
hunted it down and found a recent version at
ftp.uni-kl.de/pub3/atari/incoming/ . A great game. Definitly the
most complete and comprehensive Doom clone I've seen on the Falcon
yet. At this time, I have RGB hooked up, I had no problem running it.

2158. Software to save CD-DA tracks as AIFF file?

Newsgroup: comp.sys.atari.st
Date: 1997-05-09 00:00:00 UTC
From: mb@tos.pl.net
Message-ID: <W1EMCVC@tos.pl.net>
Source record: 122640

I am looking for software that will save audio CD tracks to a file.

I have tried CD-Player by Alexander Clauss, but this does not save in AIFF format. The CD player that is supplied with Extendos is even worse - only supporting AVR format and putting clicks in the audio.

Of course I could convert the output from CD-Player to AIFF, but it would be much easier if the output was in AIFF format to start with.

Any suggestions about where to find such software would be appreciated.

> than to hit a key. I'd like to get Gemar working but this has got me
> stumped. Do I need to use CBHD to boot rather than HDD?

No, you can run GEMAR in combination with HDDRIVER without CBHD. All you need is to put SCSIDRV.PRG in your AUTO folder. If this doesn't work you should contact Steffen Engel, author of GEMAR and SCSIDRV, about it. Make sure you use the current versions of his software. (For GEMAR this is version 3.06 as far as I know.)

->1040 STe.

Just get Newsie and config it. Then it will download a list of all the
newsgroups from your ISP. Then use something like Fsearch7 to search
that list for "atari", and you'll have a list of only the Atari-related
newsgroups. You can save it as a text file, but I don't think Newsie can
use the Atari-related list itself.

Not sure if Electronic Workbench is Analog or Digital or both.

For a good digital simulator, try CLA, available at :-

If anyone has a Falcon they don't use anymore I would definitely
be interested in taking it off of your hands.Just a standard Falcon with 4
meg and maybe a small hard drive is all I need,no monitor or extra software
necessary.
I really want to buy a Falcon right now,but I can't afford 750
dollars for a brand new one,plus that's ridiculous anyway,this is after all
1997 not 1992.So if any of you out there have one collecting dust please
consider selling it,to me! It would have a good home and get plenty of use!

-Satcom2

p.s. I can't believe I missed that one for $275 dollars on usenet,I'm
kicking myself,ouch,argh! He had just sold it when I contacted him. I
can't sleep at night*... :(:) (c)1997 *really,I can't.

2164. STinG TCP/IP Stack Beta Version

Newsgroup: comp.sys.atari.st

From: csilver@kendaco.telebyte.Spam.This.com
Message-ID: <5kuid2$i3d@news.telebyte.com>
Source record: 122646

Hi All,

I've been trying to get Peter Rottengatter's TCP/IP stack "STinG" to work, but unfortunately I can't resolve my ISP's nameserver. The dialer connects fine, but that's about it. This is a *very* comprehensive stack and I hope it get's out of the beta test version soon :) It has too many features to mention them here. If anyone has this working on a Falcon, please let me know. The English beta version is at:

http://www.stud.uni-hannover.de/~perot/index-e.html

My setup is: 14megFalcon/TOS4.04/AES4.1/NVDI4.11/FAST_SERIAL/

A couple of oddities. When I bootup I get a "DNS cache load failed" as STinG loads the *.stx modules. After trying to get several prg's to run after connecting with STinG with no results, I had a hunch. I replaced the default.cfg and dial.scr with my original STiK files. This connected just as well as my previous efforts. I knew I was in trouble ;)

If I recall correctly, you're using a TT, right? If you have a Falcon,
CDReader (the registered version) exports AIFF. Otherwise I don't know.
This is the best I could do.

P.S. Get STinG - it rocks! :) (Anyone able to tell that I love this
program?)

Yes. STImage, to be found on my download page, will write disk
images back to a disk. But it's a PC proggy... it would be easy
to write an Atari version though - .ST disk images are just
that; no compression, no strange layout, just every sector on
the disk in logical order.

Requested minimal specifications:
-------------------------------------------------
Stacy 4
-------
TOS 1.04
4Mb of Ram
Internal HD
-------------------------------------------------

Internal HD capacity is not important, as replacement SCSI drives
are available locally, but I do need that Internal SCSI controller.

Preferably offers from within Canada or, if the deal is right,
from United-States... although I would rather avoid the burden
of Canada Customs if buying from the US.

e-mail offer and details (condition of equipment, included goodies),
and specify the currency when quoting your offer.

See my homepage for more details and possible trade-in solutions.

From: q-funk@REMOVE.ANTI.SPAM.FIRST.megacom.net
Message-ID: <5kv0je$46i$2@cti01.citenet.net>
Source record: 122654

For Sale:
----

* 4160 STE (TOS 1.62, 4 Mb)

* MEGAFILE 60

Canadian offers only! Will sell to best offer, or trade both
together for either of the following:

* MEGA-STE (TOS 2.06, 4Mb Ram, HD Floppy, Internal SCSI HD)

* Stacy 4 (TOS 1.04, 4Mb Ram, Internal HD).

Internal hard disk size un-important, local prices on SCSI drives
are rather affordable.

NOTE: nothing against our friendly neighbors from down south,
just Canadian banks causing troubles for cashing foreign
currency of any kind, including American.

However, if you're interrested in trading your MEGA-STE
or your Stacy, we can arrange something, as there is no
currency exchange involved.

More details available on my homepage.

2173. Buying Atari T-shirts

Newsgroup: comp.sys.atari.st
Date: 1997-05-09 00:00:00 UTC
From: lais@cs.man.ac.uk
Message-ID: <5kv453$ne5@m1.cs.man.ac.uk>
Source record: 122655

Whoops, I got a bit carried away. Several people have mailed me asking how to
get these T-shirts. OK, as printed in May 1997 Sky International magazine:

T-shirt offer (BCC027)
Black Cat Communications Ltd
J.E.M. House
Littlemead
Cranleigh
Surrey
GU6 8ND
England

01483 204413 (24 hours)

Visa and Access (credit card mandatory for overseas orders)

T-shirts are 11.99UKP each, or
23.99UKP for three,
29.99UKP for four

Order codes:
SS168 - Space Invaders logo
SS163 - Atari logo under a Fuji symbol
SS167 - Asteroids arcade game logo with Atari and Fuji symbols too

State size, large or extra large.

Postage and packing is standard at 2.00UKP, or 3.00UKP for outside UK mainland.

I think people in the UK should check out their local HMV or Virgin Megastore
first, as the ad says record shops stock the T-shirts as well.

Hope this has helped, and by the way, I have nothing to do with this company,
I just saw their advert and thought it might be of interest to others!

I'm not so sure it is the partitions. I think the problem is that
one of the Syquest is an IDE I have installed in my Falcon. HD Driver
indeed works fine with the SCSI Syquest and drives, but it dosen't like
to mix and match disk that have been setup on the IDE device. It isn't
all IDE drives I have had problems with, the 80meg Conner IDE works
fine if setup with HD Driver. It seems it is the larger capacity IDE
drives that are causing problems. About the only example I can give
is when partitioning either the Maxtor 1.6 IDE or the Toshiba 1.06 IDE
with 4 partitions of say, 100mb for the first and the rest split, the
operation looks like it is completed and the drive is partitioned. But
upon reboot, neither HD Driver (from floppy) nor SCSI Tool recognize
the partition assignment. I'm not getting any errors during partitioning
like the not enough memory error from past versions, so I can't really
say what is happining.

Thanks,

Mike

Hi there!

I have on CD ROM the program called STTNG (Star Trek:The Next Generation) for the Atari ST. I am UNABLE to get the thing to work. All it does is shows the picture of the cast and play the sound file of Picard doing his usual introduction and then it does NOTHING. I tried running it off a floppy, the hard drive, etc...I am using an Atari 1040STe with 4 megs of RAM. I even tried it on both monitors and it says it needs a color monitor. So I did and it still won't do anything. HELP!!!

Hmmmm...
Would be nice to test it out.

I just can't seem to get it unpacked.

Self extracting?
Rather, self bombing at my end.

Hi there!

I am asking for someone to do me a GREAT favor. Does anyone have System
for the Macintosh that they use with SpectreGCR that works perfectly fine,
that then can be installed onto a hard drive?

I will pay for the disks AND the shipping, it is just that I am having
problems with the ones that I have, they don't load or I am loading them
wrong (which is probably the case).

Also, I am looking for the LINK II plug for sale (used). I would like to
get a ZIP DRIVE in my system. Thanks...

I'm still chugging along with version 3. I really don't like the newer versions (apart from the really speedy scrolling), what on earth are they doing? It's ballooningto Micro$oft proportions (OK, maybe a *slight* exaggeration) and the unpacked executable for the demo of v5 is some twice the size of v3! I was printing out a report last night and even with a 4Mb sytem it was getting tight :-/ Can't wait for those MAGNUM STE upgrades...

Yes, I have checked and re-checked the file at:

http://www.imaginet.fr/~oxo/

and both the French and English versions of these files seem to be corrupted. They are ZIP self-extracting archives and running the Zip Fix utility doesn't solve the problem either.

Who has a working copy of either of these files, and where/how did you get it?

The self-extracting archive for 1.45 worked fine for me, by the way. And as I used the same method to fetch 1.70d I don't think the problem is how I downloaded.

I've been having even worse luck. I downloaded the .lzh archive from:

http://www.stud.uni-hannover.de/~perot/index-e.html

and when I try to unarchive it I get a crc error on the last file. But when I look in the folders created by the unarchive process I notice that many important files are missing. I can not find another copy of the archive to try to fetch.

I'm having the worst luck dowloading files today. I can't get the WEN Suite 1.70d archive to work either. Strangely I had no trouble with 1.70.

I do and I got it from the homepage of Oxo.
I uploaded the archive wb170d.zip to ftp://128.120.234.42/atari/upload
just a few minutes ago.

The selfextracting archive never worked for me. I always use STzip 2.6 or
twoinone instead.

Out of the ether, the following was mentioned by tom.derrick@acpu.com...:

t> I use an Atari Ptc1426, which displays all ST rezes, and TT Low
t> and Med. It won't do TT High. To the best of my knowledge, there is
t> no single monitor which will do them all.
Tom,

The EIZO 6500 I had on my TT did all rez's, including 1280x1024x256 on my Matrix graphics card.

The only problems with it were it was mono only (though they did do a colour version), and the fact that it had two connectors on the back, one for ECL operation (i.e. TT-High or early Sun and HP workstations) and the other for TTL (everything else).

Though having said that it did have a switch on the front for switching between the two connectors, though this meant that if the only video output you had was the built in port you also had to switch cables (or get a switch box)!

I sold it and bought a CTX 2085 multiscan as I wanted colour output.

I am trying to get STinG to work. When I try to use PPP, I get 2 bombs. With SLIP, I can connect and ping works fine. I can use e-mail with Antmail, NEWSie, and POPwatch. CAB2.0 and 1.5 does not work. I'm unable to read news with NEWSie.
Does PPP work in STinG??? I have followed the setup as per the documentation with STinG. Is there anything else I need to know? I have a TT w/4megST/16megTT. I have not tried STinG with Mint, does it work? How do I use my modem at 33.6k? One thing I did notice was how fast STinG seems to be. I was connecting at 19.2k. It was downloading e-mail faster the STiK or GlueSTiK at 33.6K. I think we are going to have a winner when all the bugs are ironed out. Good job guys!

Just use Image Build to create a blank image but use more than
the usual number of sectors or tracks. There is a limit at which
TOS gets horribly confused but you can go well over the standard
800ishKb disk limit.

Hmmm. I partitioned my 1.3GM IDE(internal) HD with HD Driver5.13 (I
didn't
have 6.13 at the time) and have never [touch wood] had this problem.
exactly that problem anyway. :^)
Sometimes I've had to reboot a few times, rerun the HD Driver program a
few times,and not forget to select "keep partition assignment" in the
configuration.
I may also have partitioned using AHDI(HDX actually)

Sorry Guys,

All wrong there.

The SuperCharger is a V30 (8086) processored beast which plugs into the
ST's DMA port. I have got the appropriate software for it around
somewhere. If you want it drop me a line and I'll send it over to you.

Oh yes, you will need a copy of DOS as well. I found DOS 5 was the best
when installed to floppy disks.

Issue 4 has been available for several weeks. Issue 5 should be
available around the end of May, or thereabouts.

Did you have a subscription to issue 4. Many people forgot that their
subs expired after issue 3 and subsequently haven't got 4 yet.

probably best to reply to me by e-mail to this address or even better
to

I am trying to get STinG to work and could use some help. I followed
the directions and was able to make a SLIP connection. I am now able
to use the following software:
Antmail
NEWSie - e-mail and ftp only
MG-ftp
telnet V1.01
finger
POPwatch
ping

Both CAB2.0 and 1.5 fail and so does reading news from NEWSie.

Is there a way to configure the speed of my modem? Does anyone have
the PPP working?

I have everything running on both an STe and a Falcon030, so if you have
questions... :)
What version of CAB.OVL are you using? If it's not 1.25, get it. That
should fix the problem.

Configuring the modem to a higher rate is harder. Run CoNnect or
something which will set your modem's rate then use Dialer. It's a kludge,
but...

In the 'Cache & Fonts' NVDI cpx you can deselect the 'TEST' box to see
if it works, with some fonts it don't work at all, and yes it says True
Type fonts damaged ...

>little trick that somehow lets the Amiga display a ton of colors on the
>screen at once (I do not have the exact numbers here with me).

One reason you do not see many viewers for the ST/STe that display more than 16 colors is that they require software tricks to change the palette for each line, and in some cases, during the line draw. On the Amiga, HAM is a mode supported in hardware. Basically, part of the pixel information becomes an "instruction" for the display hardware. As I recall, 2 bits tell it whether to use the next 4 bits as a palette value, or whether to modify the current red, green, or blue (only one at a time) value using the data in the next four bits. Without using the palette, you would require 3 pixels to move from pure white to pure black, but choosing the 16 colors available for the base palette for HAM mode intelligently minimizes this.

The ST/STe only have a maximum of 4 bits available per pixel, so implementing a "HAM" type mode in hardware would have expanded the display to only 64 colors...not enough for the effort (aside from the fact that the process may have been covered by a Commodore/Amiga patent).

I had the same 'transaction successfull' with the CAB 2.0 demo and
the same configuration as Martin (except that I'm using Geneva in
place of N.AES), but now, having bought the complete CAB 2.0 version,
it seems the transaction is never more 'successfull', then I think it's
the demo version of CAB which make believe you have a successfull one.

You can try this site:
http://www5.tripnet.se/~mille/english/atari.html
Mille Babic has got a great deal of internetsoftware for the atari to
download.

If your disc-drive on the atari is of HD-type, I guess the PC-format
disc could be extracted right away, if you just have got i.e. STZIP
(Which I think can be downloaded from the HENSA-archive:
ftp://micros.hensa.ac.uk/micros/atari/tos/atari-tos.html

There you also can find other archivers (arj, lzh etc..)
I�m not sure if WINZIP is capable of using multiple-disc function
(splitting an archive up on more than one disc if file is to big..), but
I KNOW that it is no problem with arj-files...

..Hope that something will work!..

Hi, I had the same problem as you have.
Your falcon has the double VBL bug. You need to patch the hardware.
Just one resistor to remove and change it for another one(value).
I am sure someone will post a message describing the exact patch.
Bye.

: Any suggestions? I don't no.

: regards, robert

Okay, to help everyone out with this, I uploaded my STinG files (minus my password <grin> to my temporary web site (it'll stay, but I'll only do anything with it when I need to get someone something). These files are for my 14meg Falcon/TOS 4.04/MagiC5.03/N.AES 1.1.0/NVDI 4.11/HSModem 0.7/... My setup for STs will go up when I go to work in about 10 hours. They work great for me, and I hope that this gives some people a leg up. What version of fast serial are you using, by the way? I'd rather use that if I could but 0.96beta does not work at all for me (well, I only tried it under MagiC). Oh, my LOCAL.FEE file gives an error, as I don't pay extra fee, and I'm on a monthly pay system for my Internet, change it as you need to (or don't). The files you'll need to change for sure are DEFAULT.CFG, DIAL.SCR and if you don't have the STING folder on Drive C, STING.INF (auto folder), and DIAL.INF (in STING folder).

Hi Albert,
#
About a month or so ago there was a lot of posts about this. The bottom
line is I don't know of ANYONE using a TT/CAB/STiK/Gluestik that can
get mailto to work ;(It works fine on my Falcon and has for some time
with various CAB's/OVL's etc. The TT is a different story...

Weird, works fine on my TT with either STiK 1.13 or STinG 1.00.
What FAST_SERIAL/STiK/CAB.OVL/CAB versions do you use? I have:

FAST_SERIAL 0.96b <- English F_SERIAL.CPX on my WWW
STiK 1.13
STinG 1.00
CAB.OVL-030 1.25
CAB-030 1.50

I still get that message every time, though. When, exactly, does this
cache.dns file get created?

But even more fundamental, I can't even get connected!!

The Dialer appears to run through the script great, and then after the
final 4 sec. countdown I get 2 bombs, and I'm back at the desktop. The
modem is still connected, but Ping and TracerRoute don't work.

I using a Falcon/14/4.04 with NVDI 4.10, HSmoda07 in the auto folder, and
xconrol.acc as the only .ACC.

Any Ideas??? Anyone??

BTW, I tried to edit default.cfg to my specifics...was that okay to do?
The docs didn't say anything.

For Sale

Three great joysticks for the Atari ST, 2600, or other Atari-connector compatible gaming device.

1) Suncom Super Stik -- a short sticked, short throw joystick that is built like a tank.

2) Coleco Joystick -- White in color, this joystick is a shorty that is very comfortable to hold due to its rectangular shape. Very responsive.

3) Atari Joystick -- Standard 2600 VCS joystick. Long handle, lots of give.

All are in excellent shape, work great, and would be pawned off as new if I weren't so honest. :-)

Get all three joysticks for $5.00 + postage from California, or best offer.

Credit cards/e-money accepted. Enquire for details.

Must sell! I'll be tossing them into the trash if a buyer isn't found soon.

Source record: 122596

Do you have a 1040STe? Are you sick and tired of lifting your whole computer in the air just to plug in a second joystick? You need a splitter cable so you can have your mouse and 2nd joystick hooked up at the same time! Hard to find these days, but you can buy mine for only $5. + postage from California. Too much? Make me an offer, I'd love to see this thing get used instead of ending up in the garbage.

For Sale

ST Replay audio digitizer, from MicroDeal. This hardware device fits in the ST cartridge slot and allows you to digitize music, sound, your voice, whatever you feed into it! Excellent condition, original box included. You can use a variety of software to run it, I'll include a copy of what came with it. (The original disk went bad. I sent it to MichTron for a replacement, but never got it back. You can have my backup copy.)

$15. + postage from California, or make me an offer.

Must sell!

Like I said in my earlier posting though, just get Douglas Littles' program, PhotoChrome 4.0. It will take a GIF (and other formats) covert it to its own format (.PCS) and allow you to view 19200 colors out of a possible 32000! Don't let anyone tell you it can't be done-I (and many other satisfied STe owners) have seen it! Absolutely amazing picture quality! :)

Haven't seen a C-Lab web site. Sound Pool I think has one. Probably about
as close as you will get:).

You need an app or cpx called NVRAM config (or something close), or set NVRAM.
You can select the language there. I think I had seen where System Solutions
carried the ROMS, or possibly The Upgrade Shop. They seem to be building up
some steam in the Falcon market. There is a file about called TOS492 that when
set up properly will load the "beta" (?) TOS into memory for you. Some said it
is a little buggy. I didn't have any problems the little I tried it. Some have
said that it should have never been released (given out) to the general public,
but you will find it posted in several locations, and I think it is on a few
CD's.

This may be a duplicate reply, but...

AC4 was released in the UK several weeks ago. Issue 5 is due for
release around the end of May.

How do you subscribe, direct from the UK or via some other
distributor?

Probably best to reply to me by e-mail to ataricomputing@cix.co.uk
which is checked more often than this account.

I had to rename the sample file so it wouldn't play, somehow that's the
only way the game will play. But you wouldn't wish to waste your time
since it's just yet another boring text-only Star Trek sim.

If you really want a better game, get Star Trek: The Klingon Wars. Mouse
control can be sluggish, but still quite good.

2262. Falcon and software for sale - GREAT BARGAIN!

Newsgroup: comp.sys.atari.st
Date: 1997-05-11 00:00:00 UTC
From: brmiller@tiac.net
Message-ID: <3376526D.CE20D389@tiac.net>
Source record: 122482
Cross-posted to: comp.sys.atari.advocacy,comp.sys.atari.st

```
Yep, folks, I've been a TOS user for well nigh ten years now, but it's
finally time to sell the ol' Falcon (which was a fantastic machine for
my media business from 1994 to 1996!)
```

So, I've decided to price it low so someone else can get as much fun and use out of it as I did. The following is the listing of what I have for sale, and how much it will cost ya (note - add in the shipping fee and COD fee):

One Atari Falcon 030 4/0 - Yep, this is the good ol' stock Falcy we all know and love. It comes with keyboard, mouse, and all the other myriad ports and software that Atari included (GDOS, language disk, etc.), including MultiTOS and AtariWorks. I'll also throw in Geneva, the fast multitasking environment with customizable appearance. Most manuals are included, as are original disks. If you REALLY have to have it, I can throw in the original box, too (though it would take longer to get to you that way). Asking $400 OBO.

One 500 megabyte hard disk with Falcon cable - it's got a ton of shareware, registered and unregistered, as well as HD-installed versions of the Geneva multitasking OS and AtariWorks (both of which I'll keep on there if you buy the computer, since you'd have the legal copies already. Otherwise, they won't be on there). In particular, there's a wonderful working Internet setup, with CAB, STiK, Newsie, MGFTP, and a number of other goodies, all waiting to go! And if you decide to go for the whole bundle, all the commercial apps below will be on it already (plug and go computing!) Asking $150 OBO.

One copy of Calamus SL - the wonderful modular DTP package. Includes all the base modules plus raster objects, vector objects, and a few extra fonts from a DMC upgrade deal. Everything you need to do top-quality desktop publishing work. All manuals and disks included. Asking $75 OBO.

One copy of Envision Elite - a great bitmap editor, with lots of powerful functions. Sort of a "mini-Photoshop," without the filter plug-ins, this program allows full editing in color and has a number of powerful brush and tool functions. All manuals and disks included. Asking $25 OBO.

One copy of Papyrus 3 - WOW! What a WP! This document processor includes EVERYTHING you need to get started and keep going,

including full GDOS and SpeedoGDOS support, a powerful spell-checker, and layout options that make it a formidable challenger to word processors like WordPerfect for Macintosh!&#65533; All manuals and disks are included.&#65533; Asking $75 OBO.

One MiGraph COLORBURST 16-bit color hand scanner - WOW again!&#65533; This hand-scanner from Migraph works with the Falcon only, and allows true-color scans of just about everything!&#65533; Includes all manuals and disks, as well as interface cable.&#65533; Falcon only, asking $150 OBO.

One Supra 14.4 FAX Modem with cables - nice for browsing the web with.&#65533; Works great with STiK and CAB/Newsie/Oasis, etc.&#65533; Asking $50 OBO.

So. . . the total system, as priced above, with everything, is $925!&#65533; Buy everything together, and I'll sell it for only $825 OBO!&#65533; All you need to do is add an Atari monitor or VGA monitor (with appropriate adaptor), and you'll cruise into high-speed TOS computing without a hitch!

If you're interested, please e-mail me at brmiller@tiac.net, and we'll talk!&#65533; I'll verify that everything's in working order before I send it out to you, so if there are any problems, they'll be caught.&#65533; Finally, unfortunately, I have to insist that all transactions be conducted COD, with the buyer paying the COD and shipping costs.&#65533; I am only doing this because an unscrupulous individual stole my 1040ST from me by writing me a bogus check.

Thanks for your time!

When you get all the groups in Newsie (or some of them), with the groups
window open, hit "m" on the keyboard. A dialog will appear. Type in the
string you want and Newsie will show the groups that contain the
string. You can then subscribe directly. No need for external searching.
I hope i helped

2268. Infusion BBS Software

Newsgroup: comp.sys.atari.st
Date: 1997-05-11 00:00:00 UTC
From: Grant Passmore <skaboy@usa.net>
Message-ID: <33765d10.1@data.wt.net>
Source record: 122488

I just thought I'd let everyone know....

There is finally a BBS Software with all of the great features of OBV/2 and Iniquity, but without the bugs and bad
support. Infusion BBS Software is a new generation in BBS Software, modeled after OBV/2 and Iniquity with everything
that the sysop can imagine..and more.

Some basic features are:

o Multi-node upto 255 concurrent users
o Light-bar support [arrow keys]
o Requires NO Fossil Driver [selectable FOSSIL, ASYNC, and Digiboard for each node]
o Online Configuration [menu editor, string editor, evemt editor, node editor, system editor, etc]
o Pipe Color Codes
o MCI Codes
o Powerful scripting language
o Internal One-Liners, Blacklist, voting booth, etc
o Internal Z-Modem, X-Modem, Y-Modem, Y-modem-g [no limit to external protocols]
o Internal COMM Program with internal protocols, Auto Up/DL
o Great support
o Basically all of the great features of OBV/2 and Iniquity combined

Infusion has been picked up by fuEl [international art group], and Infusion 1.0th will be released June 10th.

Come to the Infusion Home-Page at http://web.wt.net/~sparky/ibbs/ and jump into the JAVA Based Chatroom,
or come to the ANNEX, the official Infusion IRC Server [irc.annex.net] #infusion / #bbs

send the author skaboy101 [Grant Passmore] E-mail at skaboy@usa.net

>provider.

Hallo Mille,

Well, I do have STinG working now, thanks to Mike Saeger's info on his Auto folder setup :) The last 4 prg's are: NVDI,DRVIN,SCC,STinG. However, I can't use Fast Serial instead of HSMODEMa7 or AES4.1. STinG wants to be last...

The other problem is that STinG is only stable at 19200 baud. I changed MTU=1006, MSS=966, RCV-WND=4096, ALLOCHEM=300000 and this setup works with all my STiK clients, CAB, NEWSie, ANT Mail, etc. If I set the baud to 57600 (Modem.CPX or FSERIAL.CPX use 134 baud) connections are not good.

I haven't had a lot of time to test other parameters and I didn't change SCC.PRG with SETTER.TTL so that the LANBIT was set to "Yes". If I can't get a faster download than 19200 I'll continue to use STiK.

Regards

Charles

You would think that the shows didn't happen judging by the lack of reports coming out from both British shows.I did hear that the upgrade for Apexmedia ie: 2.01 wasn't available and the new Apex Alpha wasn't ready either. No wonder we can't get the Demoes from Titan's web page. Maybe they were concentrating on getting a new ISP instead of the new programs. I would personnally love it if they would place the upgrade to Apex on a reliable FTP site along with the new viewers. This is about the only news that was reported to me. Not very impressive there guys ! Come on break your oath of secrecy so that we can all hear the new juicy stuff.

Don't know really. It seems that the version of STzip that my brother is
using doesn't handle well the ZIP files I downloaded. Next week I'll try
again. Where can I find GlueStik ?

> You will also need the CAB for Mint-Net Overlay...

Mmm. I think I've got it.

>2600 line).

I'm a little slow - I didn't pay attention to this last night. That's
not a modulator, it's an antenna switch box. The modulator is
soldered to your motherboard.

On your monitor jack, you need to take the audio from pin 1, composite
video from pin 2, and ground from pin 13. Getting the plug is the
tough part. You can use any 75-ohm coaxial cable for the video
portion (a "video dubbing" cable is ideal - just cut off the pulg at
one end and solder to the DIN plug). A cheap Radio Shack RCA-plug
audio lead is fine for the audio. Connect the shield of both to
ground, and then plug the resulting cable in at all three ends. You
can then get direct video on your VCR/TV with direct audio as well. I
did this to produce a demo tape (VHS) for the Lake Charles Fido sysops
a couple of years ago (they weren't paying attantion to the make of
the computer I produced "all those great demos" with until the end of
the tape <GRIN>).

2275. Re: WebSpace/WenSuite v1.70D (07/05/97)

Newsgroup: comp.sys.atari.st
Date: 1997-05-11 00:00:00 UTC
From: csilver@kendaco.telebyte.Spam.This.com
Message-ID: <5l3gt9$6o@news.telebyte.com>
Source record: 122608

Hallo Martin,

If you or anyone has WebSuite up and running with a PPP connection, please test these Web sites to see if the gif's show properly:

http://www.atari.com/
http://www.emulators.com/
http://slate.com/
http://www.sidewalk.com/
http://www.pcquote.com/
http://www.qvc.com/

CAB/STiK/STinG/ can't do it... I don't have a PPP connection so I can't test WebSuite ;) Thanks.

Charles

2276. Revenge of the Spammed!

Newsgroup: comp.sys.atari.st
Date: 1997-05-11 00:00:00 UTC
From: atari@teleport.com
Message-ID: <5l3pnd$4gb$6@nadine.teleport.com>
Source record: 122609

I, for one, am tired of the "gorw hair fast" and "make money fast"
scam/spams that turn here as well as elsewhere on the web. Here's a
cross-post from someone who clearly knows what he's doing, with
complete info on how to jam the spammers:

========
Subject: SPAMMERS AND SPAM BUSTERS READ THIS
From: rory@ro.com (Rory O'Moore)
Date: Tue, 21 May 1996 03:14:10 GMT

Okay. That's it. Enough of the commercial shit.

SPAMMERS take note: I will now explain to the
users of this newsgroup how to report you to
your ISP, and get your account yanked. After
you burn two or three ISPs this way, your name
gets around, and you find that you can't get
back online. Take the commercial shit to the
appropriate newsgroups [look 'em up yourselves].
Final warning.

SPAM BUSTERS take note: Here is all you need to do.
When you see an article that is part of a spam, set
your newsreader up so it will "show full article
headers".

Z-aholic spammed another FastCash [tm] message
into the binaries. I saved the complete header
from [it's] message.

Here's the header:

[begin header]

Path:
news.ro.com!news.sprintlink.net!news.voicenet.com!uunet!in2.uu.net!news....one....net!news
From: z-man@z.net (`Z-aholic)
Newsgroups: alt.damn.near.everything
Subject: Cash96 - Make $MONEY$ fast!!! (15/16)
Date: 30 Apr 1996 18:57:25 GMT
Organization: Traders Annonymous
Lines: 500
Message-ID: <4m5nql$6af@news.one.net>
NNTP-Posting-Host: port-1-27.access.one.net
X-Newsreader: Cyberjack News 7.00
Xref: news.ro.com alt.2600.warez:879 alt.binaries.games:119801
alt.binaries.pictures.erotic.centerfolds:9939

alt.binaries.pictures.erotica.blondes:56111
alt.binaries.pictures.erotica.breasts:46905
alt.binaries.pictures.erotica.butts:7580
alt.binaries.pictures.erotica.cartoons:24007
alt.binaries.pictures.erotica.cheerleaders:16320
alt.binaries.pictures.erotica.female:147900
alt.binaries.pictures.erotica.panties:526
alt.binaries.pictures.erotica.pornstar:33821
alt.binaries.pictures.erotica.pornstars:9651
alt.binaries.pictures.erotica.redheads:19170
alt.binaries.pictures.erotics.breasts:1461 alt.binaries.warez:250
alt.binaries.warez.ibm-pc:128488 alt.binaries.warez.ibm-pc.old:3935
alt.warez.ibm-pc:1073 alt.warez.ibm-pc.games:1716
alt.warez.ibm-pc.old:698
[end header]

Look at the path: At the end is the site the message
came from. It looks like the domain is "one.net".
Don't confuse the newsserver "news.one.net" with
the actual site domain "one.net".

A look at the message ID seems to confirm this.

IMPORTANT NOTE TO ALL: These message tags are almost
impossible to hack. It is beyond the ability of the
majority of spammers.

So now we know where the spam came from.
We don't need to know who it is. The message
ID is all the offending spammers sysop needs to bust
their asses. And all we need is the "domain" name
to get this info to those sysops.

Get a program called "finger". You can get it from
your ISPs FTP site. There is even a version on
the Web. You are looking for a utility called "whois".

Using "whois", query the server rs.internic.net
for the domain name "one.net" [omit quotes in query]
I did this and here is what came back:

[begin whois reply]

OneNet Communications (ONE3-DOM)
155 Northland Blvd.
Cincinnati, OH 45246
USA

Domain Name: ONE.NET

Administrative Contact:
Kenzik, David (DK154) dsk1@ONE.NET
513-326-0000

Technical Contact, Zone Contact:
Shearer, George (GS206) gshearer@ONE.NET
513-459-9093

Record last updated on 05-Dec-95.
Record created on 14-Nov-94.

Domain servers in listed order:

NS1.ONE.NET 206.112.192.104
NS2.ONE.NET 206.112.192.110

The InterNIC Registration Services Host contains ONLY Internet
Information
(Networks, ASN's, Domains, and POC's).
Please use the whois server at nic.ddn.mil for MILNET Information.

[end whois reply]

It's now pretty certain that if we e-mail "dsk1@one.net"
with a note, the original headers, and a sample of the offending
spam, action will occur. Also e-mail "gshearer@one.net".

Now, the guy who posted this spam listed his e-mail address
in a bogus fashion. He is too aware that his scam/spam
will piss off a lot of people, and he thinks he can hide behind
a bogus e-mail address. You can prove him wrong, and help clean
up the incredible noise in these newsgroups.

Once you have this down, you can e-mail their sysops with a copy of
their spam [or enough of it to get your point across]. Make sure
you set your newsreader to "show all headers", and include them
in your message to the sysop. This almost
always results in the sysop taking steps to stop the spam. In
somes cases, if the abuse is bad enough, the sysop will kick
the user off their system. Too bad.

Final note:
Do not mail bomb the site as it only annoys hard working sysops.
Unless, of course, it turns out the domain is owned by the spammer.

Go get `em.

Rory

P.S. Flames from spammers will be cheerfully
shared with their sysadmin.

On 11 May 1997 03:52:21, Charles Silver wrote:
>The other problem is that STinG is only stable at 19200 baud. I changed

I have STinG working at 38400 baud. When I tried to use fast_serial, STinG would connect but I would get two bombs as soon as I tried to ping the server. I'm using 38400 by using hsmodem07 and by setting the modem.cpx to 110baud for modem2. (I have a TT)
I'm still unable to use CAB or read news, but e-mail, ftp, telnet, and finger all work fine.
It had been suggested to use a faster speed than 19200, that I should connect using another modem program at a higher speed, and then when I used the STinG dialer, it would use the high speed. This did not work. Only after setting the modem.cpx to 110 baud was I able to get 38400 baud.

Message-ID: <863352342_OASIS_@zetnet.co.uk>
Source record: 122612

Does anyone know how to manually send a fax with ST Fax? I've lost all the bumpf... the problem I'm having is with a few phone/faxes which don't seem to send the right signal to kick off ST FAX. I need to be able to dial the number, get the fax tone and then hit something or other to send the fax. The on disc help files suggest it can be done but nowhere does it say how.

Alsdo, has anyone got a Microtext teletext adaptor for the Atari? I've picked one up 2nd hand and got it half working but again, no manual and there are bits I don't understand.

cheers,

I think the file is a self-extracting zip file. So you can open it
with stzip. You can also change its name to *.zip.

You can rename all lhz/zip/arj self-extracting archives with
lzh/zip/arj extension and use them as normal archive files.
This works in tos and dos systems.

Regards.

I have looked at this too and think that it looks awful on a mono STf.

I would not pay good money for this to run on my 4Mb STf/SM124 Cab is good enough for the limited browsing you can accomplish on such a setup.

Hi out there,

I'm looking for a nice picture of the nova mainboard.
(NOVA Card)
I like to add one to doitf030. A normaly .GIF in 256 colors looks nice ;)

ftp?

regards, robert

I'm having the same problems. I had to go in and configure the DIAL and DEFAULT scripts by hand, and I'm getting messages on bootup that the DNS cache is uninstalled. I then try using the dialer application and it'll connect me up via PPP, and then BOOM! two bombs, Dialer is booted out of memory, and no access to the ISP. If I try configuring one of the CPXes, I get two bombs and then XControl is booted out of memory, and if I try to reboot XControl bombs and hangs the system until I remove the CPXes. The documentation is scant, and the HYP files for ST GUIDE are extremely unfinished.

If anyone can detail how they got STiNG up and running on their systems without bombs and cleanly getting onto a PPP connection, there are a number of people with TAF that would be eternally grateful :)

2289. Re: The best ST games are little known...

Hi,

I've just downloaded Shocker2 via ftp from:-

wuarchive.wustl.edu/systems/atari/umich.edu

it's in the "Games" directory as "shocker2.zip".

At first glance it looks pretty impressive.

Cheers:-)

Trev.

Hello,

The ultimate atari program index for downloading from a web page is
about exploding now (not yet :-) !!!)

There you'll now find about 150 linked programs !(freeware,
sharewares, demo versions ...)

Let's have a look ... I didn't think there was so much freelance
programmers, developpers and creators on our machines ... it becomes a
real pleasure to discover and discover day after day that Atari world
is really in a good health ... alive !

VIVA ATARI MANIA !!!!!!!!!!!!!!!!!

Jo

First, get the latest version of STinG - you're using a RESOLVE.STX that
doesn't create CACHE.DNS. Secondly, it's looking for your DEFAULT.SVR in
STinG's directory. DEFAULT.SVR is a file of Newsie's. (Oh, and you're
using Newsie 0.72 - get 0.74)

2301. The great Atari hardware sale is now just a software sale!

Newsgroup: comp.sys.atari.st
Date: 1997-05-12 00:00:00 UTC
From: brmiller@tiac.net
Message-ID: <33775E32.6D59B6B9@tiac.net>
Source record: 122434
Cross-posted to: comp.sys.atari.st,comp.sys.atari.advocacy

Hello, everyone:

The Falcon, hard drive, and scanner I was selling are now sold!
Here's what remains of my esteemed inventory:

One copy of Calamus SL - the wonderful modular DTP package.
Includes all the base modules plus raster objects, vector objects,
and a few extra fonts from a DMC upgrade deal. Everything you need

to do top-quality desktop publishing work. All manuals and disks
included. Asking $75 OBO.

One copy of Envision Elite - a great bitmap editor, with lots of
powerful functions. Sort of a "mini-Photoshop," without the filter

plug-ins, this program allows full editing in color and has a
number of powerful brush and tool functions. All manuals and disks

included. Asking $25 OBO.

One copy of Papyrus 3 - WOW! What a WP! This document processor
includes EVERYTHING you need to get started and keep going,
including full GDOS and SpeedoGDOS support, a powerful
spell-checker, and layout options that make it a formidable
challenger to word processors like WordPerfect for Macintosh! All
manuals and disks are included. Asking $75 OBO.

One Supra 14.4 modem with cables - great for web browsing. Asking
$50 OBO.

If you're interested, please e-mail me at brmiller@tiac.net. The
remaining stuff clocks in at $225, but buy it all together, and I'll let
you have it for just $200 (plus S/H and COD costs).

Thanks!

brmiller@tiac.net

Nope, can no do Kim! I get an error everytime! I tried that before and
the only time SCSIDRV.PRG worked was from the AUTO folder. Otherwise,
it looked for CBHD and reported a "CBHD transfer error" at the desktop
level.

Mumbled.... he said with a look of consternation on his face.....

It may not be your card, Martin. I get similar effects on a standard STM with mono monitor.

The version says it does not support frames - all well and good you might say but actually it HALF supports frames by reserving the framespace which then buggers up the rest of the display.

It is also mighty unhappy when running with Let 'em Fly (menus go mad).
p> There is still lots of work to do.

I agree. I regard v1.7 as a review of work-in-progress.

Hi cronos@worldaccess.nl, on 11 May 97 you wrote:

c> The filename should not be "magic_pc.os" but "magicpc.os".

ROTFL. It's often the simple "bugs" which are the hardest to find!

Hi jon@smart.co.uk, on 11 May 97 you wrote:

j> Anyone know of an electronic circuit simulation app?

Yup. Try CLA. The latest archive I have seen is CLA3.LZH (6.96)

It is a bit specialist and therefore rare. Put out a file search for it.

Hi newhoriz@cadvision.com, on 11 May 97 you wrote:

n> Anyone using GEMAR v3.06 out there?

Yes, yes, join the club, Keith. I switched from Diamond back because GEMAR gave me decent HD/streamer buffering and much increased transfer rates.

n> I using HD DRIVER v6.22 but
n> Gemar needs to have SCSIDRV.PRG run either from the desktop or the
n> AUTO folder. When run however, it gives a "transfer error" message to
n> the screen after it logs all the drives attached to my TT. Then it
n> says CBHD error or some such with something else in German I don't get,
n> other than to hit a key. I'd like to get Gemar working but this has
n> got me stumped. Do I need to use CBHD to boot rather than HDD?

I can't be much more help than to say that if you DO use CBHD as your standard (boot) driver (as I do) everything works OK.

The docs. lead you to believe that all you have to do is to run SCSIDRV (to install the s/w SCSI interface used by GEMAR). I can't rightly remember the experiments I did when evaluating GEMAR but I certainly ended up installing CBHD as my standard HD driver. I don't think I would have done this unless I had had the same problems as you.

In my case this displaced the ICD driver, not much of a sacrifice. I think I'd be less happy about having to lose HDDriver, though.

: speak in italian...)

If you are a programmer, then look up in the XBIOS reference manual and you should find a XBIOS call that re-init's the nvram.

If you're not a programmer, then I'll knock something up later on and mail it you you (the binary should only be a few bytes long :).

I have the same problem myself: I got really hacked off with my VGA monitor booting up in ST-low res so tried to make a program to change it to whatever res I wanted. As you can probably guess, I messed it up and needed to start over!

Cheers, and good luck,

James Cox

<snipped>

There's an excellent piece of software for the PC called "Spam Hater" which works with most of the PC news and mail programmes. It takes a copy of the spam and the headers and analyses the domains. It adds the addresses abuse@somecom.com and postmaster@somecom.com and gives a list of pre-prepared replies such as "Sir, I have been spammed by one of your users" etc.

You can do most of this manually, but maybe the developer of the Atari Newsreader programme would be interested to build this facility into his program?

Jim

well, I`ve got both GEMulator (demo) and PaCifiST working on my PC. :)
I successfully compiled GD under GEMulator, but the problem is that
I cannot see the map as it is in 640x400x2... :)

But this has got more to do with MagiC then WenSuite. MagiC doesn't
draw the resource objects in the same way as TOS (as you probably
know). But I agree, they should have thought about it and fixed it.

I would call this a beta realease as well and I don't expect it to be
a finished program until version 2 is released.

I don't know many places that sell them but most 3rd part "Amiga" mice
have a switch on the bottom that toggles Amiga/Atari compatability,
Hisoft might have some, I don't recall the phone number but they have a
site at http://www.hisoft.co.uk/.

> stumped. Do I need to use CBHD to boot rather than HDD?

I use Gemar 3.06 on my Falcon together with a DAT streamer. For harddisk driver
i use HDdriver version 6.3 (just got it today). Before that i used ICD. Neither
HDD or ICD gave me any problems. CBHD never succeed to run here though. It froze
the system when booting.

Alternative, you can just start SCSIDRV.PRG from the desktop whenever you need
to do backup/restore.

2335. FS: Atari STF 1040 with 4 megs RAM

Newsgroup: comp.sys.atari.st
Date: 1997-05-12 00:00:00 UTC
From: jdbowen@mindspring.com
Message-ID: <5l7bl8$v1@camel4.mindspring.com>
Source record: 122518
Cross-posted to: comp.sys.atari.st,rec.music.makers.marketplace

I initially bought this Atari STF as a fixer-upper, but have run out of patience and am ready to sell this machine before I throw it out the window.

The keyboard was bad so I replaced it with a new one and the disk drive was bad so I replaced it with another 720k drive. I had the drive working fine for awhile but it all of a sudden stopped. My initial two theories are the drive cable and/or the drive itself. I paid $10 for the floppy drive, so it shouldn't be a headache if the replacement drive is truly bad. The machine and monitor work perfectly except for that fussy disk drive.

Includes:
- Atari 1040 STF machine with 4 meg ram
- Color monitor (Atari SC model)
- Over 100 disks with misc. software (MIDI, shareware, games, applications)

Price: $100 (firm) plus shipping from Atlanta, GA

Help !

Here is the situation :
- I have gdos.prg.
- I use "timework publish" installed for a 24 dots printer.
- My printer is a Canon Bj10e
Recently, I found on the web :
- A bj10e driver for gdos.
- Many bitmap fonts, some of which are interesting.

There are two problems :
- I'd like to use my bj10e at best, that is with the bj10e driver and so
I would like to somehow convert all timework publish fonts from 24dots
to ink printer (must be from 240dpi to 360dpi).
- I wish I could use the nice fonts found on the web but :
* How can I build font sizes from the one I have
* How can I make the difference between screen and printer fonts
* How can I be sure every printer font will have its screen counterpart
* How can I be sure every screen font will have its printer counterpart
* How is the correspondance made
...

Thank you for your help.

Yves Gablin.

PS :"timework publish" doesn't know what 'ink' means...

2350. Reflex graphics card/A4 monitor F/S (UK)

Newsgroup: comp.sys.atari.st
Date: 1997-05-13 00:00:00 UTC
From: DCroker@mettav.demon.co.REMOVE.TO.REPLY.uk
Message-ID: <3854_DCroker@mettav.demon.co.REMOVE.TO.REPLY.uk>
Source record: 122333

Reflex graphics card is plug'n'play in a MegaST but requires soldering to fit an ST (not STe unless Titan have adaptors still). Will drive Atari mono monitors but a dedicated monitor is recommended to avoid eyestrain! Latest driver disk, connection details leaflet for ST and manual. Apparently will fit inside ST case.

Samsung A4 paper white portrait monitor for the above, excellent condition

175UKP plus carriage for both.

Regards, Derryck

Hi Dan and Leslie,

The message "DNS cache load failed!!!" is caused by an auto folder conflict.
Such as loading NVDI *after* STinG. STinG wants to be loaded last ;) That
eliminates using patch prg's like AES4.1 that need to be run last also.

BTW, thanks for changing the thread. New CAB.OVL has to do with an "Image
Loading Error" that has yet to be solved. Alas, STinG didn't help...

C'est la Vie,

Charles

2360. GEMAR & HDD

Newsgroup: comp.sys.atari.st
Date: 1997-05-13 00:00:00 UTC
From: SSweet@mettav.demon.co.REMOVE.TO.REPLY.uk
Message-ID: <3764_SSweet@mettav.demon.co.REMOVE.TO.REPLY.uk>
Source record: 122443

SUBJ: GEMAR & HDD

n> Anyone using GEMAR v3.06 out there?

I'm using an unregistered version here on my MegaSTE with a Hewlett Packard
DAT drive.

n> I using HD DRIVER v6.22 but Gemar needs to have SCSIDRV.PRG run either
n> from the desktop or the AUTO folder.

Yes, thats right, makes no sense to me at all.

n> When run however, it gives a "transfer error" message to the screen after
n> it logs all the drives attached to my TT.

Thats odd, heave you tried investigating the CBHD configurations with the
CBHDCONF.APP to see if something is not right.

n> Then it says CBHD error or some such with something else in German I don't
n> get, other than to hit a key. I'd like to get Gemar working but this has
n> got me stumped.

Is this with a registered GEMAR??. Ive not got a REG Key for mine, but i
wouldnt have thought that would make a difference. Perhaps you ought to
reinstall both pieces of software and start again.

n> Do I need to use CBHD to boot rather than HDD?

No, i run SCSIDRVR from my Auto folder and get no probs.

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

2361. ST and TT RAM

Newsgroup: comp.sys.atari.st
Date: 1997-05-13 00:00:00 UTC
From: DCroker@mettav.demon.co.REMOVE.TO.REPLY.uk
Message-ID: <3760_DCroker@mettav.demon.co.REMOVE.TO.REPLY.uk>
Source record: 122444

Hi All,

Now that I've got a Magnum ST board in my STFM I'd like some advice/info on the best way to allocate the "load to TT RAM" and "Malloc from TT RAM" switches in program headers.

If I were to set both these switches and run out of TT RAM by loading several progs (under MagiC), would the system be clever enough to look for ST RAM to fulfill the calls for memory?

And what should I do with progs that print to the Atari laser?

Speak to 'ya later!

h> Secondly when accessing the menues the text in them seems to
h> re-write itself on the screen 3 times (on top of each other, slightly
h> apart) so it's near impossible to read.

Yes, I got this effect, Hallvard. In my case it was cured by removing Let 'em Fly. Have you got this installed? I have written to oxo about this.

h> Have I forgotten to set something, or is the program really this
h> bad?

I think it IS this bad :(

If you give it an HTML containing frames the display is really screwed up. I know that the demo says it doesn't support frames - unfortunately it PARTIALLY supports them and this gives problems.

I regard this release as no more than a demo of work-in-progress. The display speed is impressive as is the promise of integrated web/e-mail/news but there is a LONG way to go yet!

h> My system compromises of a 4MB STe/TOS 2.06/MagiC 4/NVDI 4.11

And here, 4Mb STM, TOS 1.4, MagiC 2.5, NVDI 2.5 WITHOUT Let 'em Fly!

2366. Atari Laser Printer SLM804 - PC Connection

Newsgroup: comp.sys.atari.st
Date: 1997-05-13 00:00:00 UTC
From: Troy Reitsma & Dominique Hanson <guild@cnx.net>
Message-ID: <01bc5f7c$0ae9a900$a07257ce@treitsma>
Source record: 122449

I have been an avid user of Atari computers since 1986. My first real computer ever was a 520ST which I later traded in on a Mega 2 ST. I purchased a SLM804 Laser printer at the same time. I still use my Mega 2ST all the time, although the availability of software has been slowly diminishing for me. I also have a PC, purchased out of need and ease of purchasing parts/software for the system. I only wish that I could hook my Laser printer up to my PC. If anyone has ever done this please email me and let me know how it was done. I have no problems with modifying hardware but I need to be able to continue running my PC as it is without changing my software too drastically. I would appreciate any help I can get. Thank you for your time.

Johnathan,

Post messages in comp.emulators.misc about your site, the
denzins of this NG are really against ST piracy... they feel it's
killing the ST (which IMHO is already pretty much dead).

Just some advice, and thanks for helping me out before! =)

2368. FS: 1MEG 520STfm $35 Shipped!

Newsgroup: comp.sys.atari.st
Date: 1997-05-13 00:00:00 UTC
From: main@appstate.edu
Message-ID: <863529572.17182@dejanews.com>
Source record: 122451

I have an upgraded 520STfm in good condition for sale. The unit has
a built-in floppy disk drive. The TV connector has been removed
to allow for a memory upgrade. Power supply is internal, however,
you must supply your own power cord. Two mice included, one is
working but cosmetically damaged, the other is cosmetically near-
mint, but isn't working. Manual is also included. Free shipping
within the continental US.

Seems to work fine, even with older versions of clients. Newsie .72
is working fine (to lazy to update to V.74, V.72 works to good:).
CAB 1.5 seems to run better than ever. MGFTP and ATACK FTP both
work good. HSMODEM 6 is still hanging in there.I installed every
thing by the instructions. Early problems I had were DNS Cache
failed. This was traced to the Route.tab file where your modem
port designation is. Your ISP DNS should go to the right side of
the modem port you typed in (follow the tab instructions).

While I'm here, I'll plug my Atari stuff for sale add again:)
Get it FTP at ridgecrest.ca.us/pub/users/m/mgrove
4-sale.txt is in the Misc folder.

To many mail spams lately, so the address in the headder is incorrect.
findthis should be "us".

Mike

>>of your users" etc.

Or you could pop along to http://www.abuse.net and register (it is a
free service)
Then you can simply forward all your spam to abuse.net and they will
send it to the appropriate email, the problem with spam has always
been knowing who to complain to, some ISP have abuse@?? or
postmaster@?? and if you send to the wrong one then it gets bounced
back, making you pay again to download it, abuse.net knows the right
place,
Since using this service I have been sent quite a few replies from
ISP's and apologies and promises of it never happening again,
definatly a far higher success rate than i was getting using my own
system :)

And the beauty of course is that its platform independent, we can all
use it :)

Cheers !ynoT (ATARI Programmer)

From: Matthew Bloch <mattbee@soup-kitchen.demon.co.uk>
Message-ID: <4789B4BBCC%mattbee@soup-kitchen.demon.co.uk>
Source record: 122459

I suspect I have a broken machine, but here goes anyway: the sound is
somewhat erratic. The machine decides, when you turn it on, whether the
sound is going to work or not. The silence can sometimes be cured by turning
the machine off and on again, but not always. I'd suspect a loose connectino
if it crackled or something, but it's either on or off, depending on the
phase of the moon...? I get nothing out of the phono sockets either.

Any ideas?

Yo! Derryck Dude!

Whilst under caution Derryck said to Officer All :~)

DC> Now that I've got a Magnum ST board in my STFM I'd like some advice/info
DC> on the best way to allocate the "load to TT RAM" and "Malloc from TT RAM"
DC> switches in program headers.

Show off git!!. 8~))

DC> If I were to set both these switches and run out of TT RAM by loading
DC> several progs (under MagiC), would the system be clever enough to look
DC> for ST RAM to fulfill the calls for memory?

Throttle open on everything my man. Except MFP.PRG and DRVIN.PRG.
If you wanna ring me with a specific filename i'l let you know the state of
things here.

If you run out of RAM i'd be most suprised, but if you've got something
that's greedy you can use applicat to wean its habit a bit.

If there is no memory for an insistent application then it will complain and
exit greacefully, maybe. 8~))

DC> And what should I do with progs that print to the Atari laser?

Set all flags to TT ensign croker, as its really only ST-RAM, so you wont get
system timing clashes anyway.

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

** Mega STE + PAK 030 @40Mhz, 68882 FPU, 4 Meg ST, 16 Meg TT RAM **
-= A computer's attention span is as long as its power cord.

Sorry, I think Message-ID is very easy to hack, and Path only a little
less. The NNTP-Posting-Host is the harder to forge header, but even for
this one nobody can say it's impossible, as I can see at least 2 methods
to hack it...

Bye! Bruno.

I thank you for your offer, but Sting still doesn't access my Modem 2
port. I managed to connect with dialer, but even the tools on dialer
don't access Modem 2.
I run Stik with 115200 on Modem 2 on a MEGA STE and if i go to Sting i
need more than 19200 Modem 1 has to offer.
Any ideas?

George

Hello.

I cant get STiNG to find my modemport.

I use an ordinary STE 1040 and STiK works without any problems..
But STiNG doesnt find my modemport either with our without HSModem.

Is there anyone that have the same problems ?? Anyone got it working
on a standard STE ??

I'm asking here because I'm not getting any response in the m68k Linux newsgroup. Maybe there's someone here who can help me who doesn't read the m68k Linux newsgroup.

I'm running Linux 2.0.29 on a TT. I have a Toshiba 3401 CD-ROM drive attached to the ACSI port. The Linux kernel needs special configuration to recognize this particular drive. Unfortunately, the special configuration is only applicable to the SCSI port. I'd like to attach this drive to the ACSI port on the TT rather than the SCSI port.

Has anyone here been successfull in attaching a 3401 drive to the ACSI port on a TT running LInux?

And Neil Roughley wrote:

Due to my new server 'throttling' my posts to c.s.a.s.,
Charles Silver is posting the following for me:

While checking up on the latest version of AFTP for STiK, I went to
the following URL:

http://plzen.eunet.cz/consul/atari/atack/products/aftp.html

Under CAB and STiK, the page comes in with no graphics because of HTTP
error 406 (i.e., all the graphics come in as the same 69-byte file).
When I clicked on the link to grab the latest version of AFTP...

http://plzen.eunet.cz/consul/atari/atack/products/aftp11b3.zip

..that same error 406 occured, this time showing correctly in the
browser (as all HTTP error messages are supposed to).

Not being able to access the file in CAB, I decided to use NEWSie's
'Open URL' to get it. When I requested the URL above in NEWSie, all
that was sent was -- you guessed it -- a 69-byte HTTP error message.
This surprised me, since I thought the source of _that_ problem was
the CAB.OVL itself. If NEWSie generates the same error message, this
means that STiK truly is the source of the error. Note that I tried
the same procedure as above using STinG, and the new stack yielded
exactly the same results. Within the STiK code (and its rewritten
counterpart, STinG) is what I believe to be a serious bug when
accessing some HTTP servers.

As an easier test, try the URL www.atari.com/images/atari.gif within
NEWSie's 'Open URL'. I get a 69-byte file called atari.gif with the
following contents:

HTTP/1.0 406 No acceptable objects were found

If I try the URL www.atari.com/images/atarixyz.gif (a purposely
non-existent file), I get the following (correct) message in the file
atarixyz.gif:

HTTP/1.0 404 Object Not Found

Same results with STiK and STinG. Note that NEWSie's 'Open URL'
normally works fine for grabbing a specific GIF or ZIP through HTTP.
It's just that both AFTP and Atari use one of those 'troubled' HTTP
servers.

Could other users out there please verify or discredit my results and post them here.

In the meantime, I'll have to find aftp11b3.zip at an FTP site since the file is not accessible through HTTP.

GEM was a product of Digital Research, whose claim to fame is that
Larry Kildall, the president (inventor of the CP/M operating system)
was busy flying his new private plane when IBM called and asked if he
could adapt his OS to a new computer they were planning to build. He
said he was busy and would get back to them. IBM, not being used to
getting treated like that, huffed off and telephoned a small
corporation whose only real product was the popular Microsoft Basic.
The president, whose name shall not be revealed but whose initials are
BG, flew in right away and promised them an OS which he also wanted to
market. It was called PC-DOS within IBM, and MS-DOS when sold
independently.
Right off the bat you can see one reason why GEM failed. Lack of
wild enthusiasm on the part of its makers.

Digital Research went on to prove it could outdo Microsoft at its
own game and produced various brands of DR-Dos which were always,
right to the end, faster, more trouble-free, and better than MSDOS.
The best and last was DR-DOS6, which Microsoft has not yet bettered,
in my opinion.
GEM was the graphical interface for DRDOS, much as Windows was
the Graphical interface for Messy-Dos.
Atari, which originally built TOS by modifying CP/M68 (a version of
CPM for 16-bit Motorola 68xxx chips) licenced the right to use and
develop GEM, which they did very well.
DR was sued by Apple for the usual look and feel reasons and

Kildall caved in. He caved in. GEM v 1 (the only licenced by Atari) was much better than the later GEM versions which had to be gutted to please Apple.

GEM v.1 on the PC looks a lot like Atari. GEM v.3, which I think was the last, is a lot clumsier and looks different.
I still have DR-DOS 5 and GEM 3 on an old PC. Atari beats GEM 3 by a long shot. But DR-DOS 5 is still faster, smaller and more reliable than the MS-DOS 6 versions.

Novell bought the rights to DR-DOS and put out a version called Novell-DOS 7 (NDOS 7) which was bloated, buggy and the end of the line. It caused more trouble than it was worth even though it was still better than the MS-DOS of the time (MSDOS 6.x).
The second-last version of the system is still in use, under the name of OpenDOS, and it is freeware. It is a variation on the DR-DOS 6.x version. A shell developed by DR-DOS is called ViewMax and it looks vaguely like Atari GEM and PC GEM 3.

The only product that used GEM seriously was Ventura Publisher. For a long time, it was the world's premium DTP, and it came with GEM built in automatically. No one using a PC even noticed that Ventura Publisher was not using the MSDOS/windows system. It just ran.

Timeworks DTP Publisher for the Atari is a cheapo, weakened clone of Ventura, so you could always learn to use Ventura on the IBM/PVC machines ($500) by buying Timeworks for the Atari ($49). The functions and look are the same. (I have done that...but Ventura eventually saw the future, put out a version that worked with the MSDOS system, and dropped the GEM version).

Atari had bought the rights to develop GEM from the early version and never was sued by Apple and never downgraded the program, so GEM as developed on the Atari is indeed great software. Better than either MAC or Windows even to this day.

What if Kildall had landed his plane and gone to see IBM? (a) He would be richer than Bill Gates (b) Microsoft would be a minor company turning out versions of Basic. (c) Mac would be bankrupt in 1989 instead of 1998 (d) Atari would never have existed.

>I think that GEM, which is a Digital Research product, never really took >off on the IBM PC or clones. It did find a home (about 1985) in the >Atari ST >line of computers. These computers are based on the Motorola 68000 line >of chips.

DR did put out its own basic line of applications (WP, drawing program, etc.,) to stimulate development and show off its capabilities. No one followed.

Well, you will need a monitor, or since it is an STfm, you should have a
cable that connects it to your tv.
Software should be easy to transfer, since Atari uses the same kind of disk
format as an ibm. Just make sure the disk is only 720K (like the Atari),
and preferably formatted on the ibm (for compatibility reasons).

Ready for next question, Rev. :)

Soon the Amiga (almost all models) will have PPC cards available (at
a cost less than the Afterburner). These boards are manufactured in
Germany. Some will have 030's on board and some with 040/060 sockets
for compatibility. The big discussion is what software will be available
in native code soon, and what are they going to do with the Amiga O/S.
It is interesting, but only if you jump ship to Amiga, or are looking for
an used 060 board to play with.

AFAIR, this is a myth.

Supposedly, the contract IBM offered was not to Digital Research's liking,
so they refused to deal. They felt they would loose control of their
product.

Aloha,
Where in the States, or Canada can I order an Afterburner?

Also, is there a place in the States or Canada that I can order
CAB?

Thanks,
Brian

2406. FS: Atari ST Games on EBAY

Newsgroup: comp.sys.atari.st
Date: 1997-05-14 00:00:00 UTC
From: Michael Chang <changm@aracnet.net>
Message-ID: <33795CCD.5684@aracnet.net>
Source record: 122352

Hi all,

This is an update of what items I have up on EBAY for auction.

There are 2 Atart ST games up for auction. Feel free to look at
the other non-ST items.

The auction ends May 20 1997, and thanks to all bidders.

Click on the item's URL to take a peek and perhaps bid on them or

http://www.ebay.com/aw/seller-list.cgi?email=br191@torfree.net

for a summary. Thank you.

START

Times of Lore from Origin for the Atari ST
The classic Origin game for the Atari ST Sealed New in Box.
A must for any Origin fan.

http://www.ebay.com/aw/item.cgi?item=kct669197

Start at 5 US + 5 US shipping

Windwalker from Origin for the Atari ST
The classic Origin game for the Atari ST Sealed New in Box.
A must for any Origin fan.

http://www.ebay.com/aw/item.cgi?item=duv44628

Start at 5 US + 5 US shipping

Ultima 6 Cloth Map
Beautiful cloth map from Ultima 6. Mint condition with no wear
on it. Frame it, collect it, enjoy the memories.

http://www.ebay.com/aw/item.cgi?item=zoc5621

Start at 8 US + 4 US shipping

Ultima 8 Speech Pack Add-on
Add speech to your Ultima 8. This add-on is for the PC on 3 1/2
and is Sealed New in Box. Hear the chilling taunts of the
Guardian as you play Ultima 8. The top of the box is slightly
flattened.

http://www.ebay.com/aw/item.cgi?item=loh465

Start at 5 US + 4 US shipping

SNES The False Prophet
The conversion of Ultima 6 for the SNES. Great playing.
Comes with box, manual, cartridge and consumer info insert.
Box is in great condition. Manual is in used condition but
intact and the cartidge has the copyright label on the back
partially missing. Hours of fun on the SNES.

http://www.ebay.com/aw/item.cgi?item=liw07640

Start at 15 US + 4 US shipping

Ultima 7: The Serpent Isle for the PC
The add-on for Ultima 7 that lets you explore new lands.
Contains: 7 x 3 1/2 working floppies, Cloth Map, Beyond the
Serpent Pillars Manual, Origin catalog, Install Guide, Quick Ref.,
Cluebook offer, Disk Exchange form, Read Me first, and the box.
Box shows some wear and the top right corner on the side has some
tape on it. Also very small ink scribble on the front. All other
items are mint.

http://www.ebay.com/aw/item.cgi?item=nam2842

Start at 10 US + 5 US shipping

Worlds of Ultima: The Savage Empire 's Box, Map and Cluebook
This is just the Savage Empire Box, Map, and the Cluebook.
Box and map in very good condition. Cluebook in great condition.

http://www.ebay.com/aw/item.cgi?item=hbf722628

Start at 5 US + 5 US shipping

Origin Add-ons for 3 games
Set of 3 add-ons for popular Origin games, all PC format :

Wing Commander: Secret Missions on 5 1/4. CIBU.
Wing Commander II: Speech Accessory on 5 1/4 Sealed New in Box.
Strike Commander: Speech Pack on 3 1/2 Sealed New in Box.

Make those Origin games even better with these add-ons.

http://www.ebay.com/aw/item.cgi?item=int119965

Start at 7 US + 5 US shipping

CDROM Software Jukebox Collection: Adventure/Fantasy
Collection of 4 games on CDROM for the PC. Contains
Bard's Tale III: Thief of Fate, The Summoning, Shadowlands
and Maniac Mansion. Sealed New in Box.

http://www.ebay.com/aw/item.cgi?item=nzg22224

Start at 5 US + 4 US shipping

Master the Markets 3 Pack from Compton New Media
Learn the ins and outs of the business world.
Collection of 3 games dealing with Stocks, Real Estate, and
Commodities: Millionaire II, Baron and Tycoon. For the PC on
5 1/4 floppies. Sealed New in Box.

http://www.ebay.com/aw/item.cgi?item=kza0255

Start at 5 US + 5 US shipping

Collection of 3 QQP War Games for the PC
Set of 3 popular QQP games:

The Perfect General on 5 1/4 Sealed New in Box.
The Lost Admiral on 5 1/4 Sealed New in Box.
The Pure Wargame: Death from Above Vol. 1 on CDROM Sealed New in Box.

Good old fashioned strategic gaming.

http://www.ebay.com/aw/item.cgi?item=gee8938

Start at 7 US + 6 US shipping

The Hunt for Red October
The Ultimate Submarine Simulation based on Tom Clancy's
best seller. PC 5 1/4 floppy Sealed New in Box.
If the game doesn't get you, you can READ THE BOOK as it says
the complete book is included free in the game. Bonus !

Start at 4 US + 5 US shipping

Large Collection of Sierra and Misc Games
This is a LARGE collection of Sierra Games from their Bookshelf
Collection (I think) as it looks like they come with manuals, disks
and come in a plain Sierra boxes (only 4 boxes here). All are PC
based and all floppies tested OK. All disks and manuals are
originals. Also some non-Sierra stuff thrown in.

Heroes Quest 1 on 3 1/2 and 5 1/4 with manual
Quest for Glory 2 on 3 1/2 and 5 1/4 with manual
Police Quest 2 on 5 1/4 with manual
Manhunter on 5 1/4 with manual
Kings Quest 1 on 3 1/2 and 5 1/4 with manual and hint book
Kings Quest 2 on 5 1/4 with manual and hint book
Kings Quest 3 on 5 1/4 with manual
Kings Quest 4 on 5 1/4 disks only
Goldrush on 5 1/4 with manual
Space Quest 3 on 5 1/4 with manual and hint book
Leisure Suit Larry 2 on 5 1/4 with manual
Leisure Suit Larry 3 on 5 1/4 with manual

Conquest of Camelot on 5 1/4 with map only
Hoyles Book of Games on 5 1/4 disks only
Black Cauldron on 5 1/4 disks only
Silpheed on 5 1/4 disks only
Solitaire on 5 1/4 with manual
Where in Europe is Carmen Sandiego on 5 1/4 with manual
688 Attack Sub on 5 1/4 with manual
Days of Thunder on 3 1/2 and 5 1/4 disks only
Epyx Home Video Producer on 5 1/4 disk only
Quest for Glory 3 Hint Book
Space Quest 2 Hint Book
Kings Quest 6 Hint Book
Assorted Game Manuals
4 plain Sierra Boxes

PHEW !! That's all. A lot of playing involved here !

http://www.ebay.com/aw/item.cgi?item=rbt21010

Start at 12 US + shipping. Bid is for the whole lot and
shipping determined by what the high bidder wants to keep.

Collection of 3 SSI games
A collection of 3 old SSI games all for PC.

Champions of Krynn on 5 1/4 Sealed New in Box. There is sticker
saying a poster is included in it.
AD&D Dungeon Masters Assistant Vol 1: on 5 1/4 Sealed New in Box
Conflict: Middle East Arab/Israeli Wars on 3 1/2 Sealed New in Box

http://www.ebay.com/aw/item.cgi?item=sgu13852

Start at 5 US + 6 US shipping

AD&D Collection from Wizardworks and SSI
A collection of 3 SSI games all in one box. For the PC on 5 1/4
Sealed New in Box. Contains the following games:
Heroes of the Lance, Dragons of Flame and Hillsfar. AD&D fan's
funhouse here.

First of all, all SC1224s are not equipped with a SCART connector. Mine wasn't and I suspect only the latest (probably only french) models were SCART equipped.

Now, if your SC1224 is already equipped with a SCART connector, just plug a standard scart cable in and try. If it doesn't work it's probably because of a composite-only output on the VCR and and an RGB-only input on the monitor.

I tried to fit a SCART connector only to find out that my VCR did not send RGB signals and that the SC1224 did not have the composite input pins connected. I did get the VCR's sound though ;-)

In this case you would have to either get (or build) a composite to RGB signal converter adapter, which is more trouble than I was willing to get into.

2410. HD floppy upgrade

Newsgroup: comp.sys.atari.st
Date: 1997-05-14 00:00:00 UTC
From: ai063@FreeNet.Carleton.CA
Message-ID: <5lc5jh$55p@freenet-news.carleton.ca>
Source record: 122356

I recently bought a HD floppy upgrade kit from TOAD. It has an Elco chip and a TEAC floppy. The Elco manual states that only floppy disk controllers WD1772 02-02 xxx and C302096-001A work at the 16Mhz rate. The FDC in my 1040STe is C302434-001. Will it work at the higher clock rate? Can I go ahead with the mod'n safely, or do I have to change the FDC?

Please e-mail response to above address.

Thanks for any help.

It works with Mega STE. A plain ST is my development machine, you can be sure it works on that one. I haven't tested on 1040 STE yet, I hope I can do this this week.

I'd rather blame it on badly behaving programs. One really bad program (uses a lot of dirty tricks to achieve it's goals) is Freedom, for which I had a lot of reports that it would force STinG down. STinG goes somewhat beneath an operating systems surface, so it's a little sensitive to such bad software. But it works without any problems on MacIntosh (with MagiCMac), which indicates that STinG itself can hardly be bad-behaved.

Use the latest CAB.OVL (V1.25), which is a big improvement in several
things compared to older versions.

> Is there a way to configure the speed of my modem? Does anyone have
> the PPP working?

Use Atari's MODEM.CPX. I know it's bit outdated, and evetually I'll
support something new. For now it does the job however (Note with
HSMODEM's speed mapping you can activate 57600 bps by choosing the
'134 bps' entry).

Do not set any IP address in ROUTE.TAB, unless your machine is intended to work as a router to other machines. If you only hook your machine to the net, the one line with those three 0.0.0.0 is alright, it specifies the default route. Read the corresponding chapter in STING.HYP.

From what I have understood the WD1772 02-02 (latest version) works but is not 100% reliable. Some people have been using it at 16Mhz for years without problem, but it was designed for 8Mhz. You will probably need a later AJAX chip which was designed especially for HD drives.

Try Computer Direct or Titan Design in the UK. I think ordering it directly from Titan is the best way.

Austin Walshe (austin@euphoria.bay.net.au) wrote:
: Could some one be kind enough to send me the demo of WebSpace or tell me
: how to download from OXO using Netscape (or how to decode these ASCII
: characters into Binary code??

From with Netscape, hold down your shift key while you click on the link
to the file. Or find an archive that has converted the self-extracting
file to a standard ZIP archive so netscape can see by the last three
letters of three letters of the file name that the file is meant to be
saved to disk and not displayed to screen.

One place this file exists is:

ftp://128.120.234.42/atari/Web_Browsers/WENSuite/ws170d_e.zip

2423. replacing SLM804 toner??

Newsgroup: comp.sys.atari.st
Date: 1997-05-14 00:00:00 UTC
From: Ken Macdonald <macdonal@cfcsc.dnd.ca>
Message-ID: <3379DBAD.5829@cfcsc.dnd.ca>
Source record: 122369
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hi:
I've got an 2nd hand SLM804, and it's about time the toner was replaced.
So, following the directions in the manual, something like "lift the
top of the printer so that the toner/drum cartidge stays down..."
ha! It seems that _my_ toner cartridge won't stay down.
Does anyone have any more info on how to get the toner/drum parts to
stay down, so that I can replace the toner?
thanks for any help.

A contact has signed up with ZETNET here in UK, After two+ weeks he finally got his emai, password and login... but PC Software :(

He has phoned them and they are so sooory and are sending out the ATARI Software,

Can any ATARI Zetnet customers tell me what he is being sent and how easy will it be for him to set up ?

Don't suppose enter login and password details and away he goes ??

Cheers !ynoT (ATARI Programmer)

: I have been an avid user of Atari computers since 1986. My first real
: computer ever was a 520ST which I later traded in on a Mega 2 ST. I
: purchased a SLM804 Laser printer at the same time. I still use my Mega 2ST
: all the time, although the availability of software has been slowly
: diminishing for me. I also have a PC, purchased out of need and ease of
: purchasing parts/software for the system. I only wish that I could hook my
: Laser printer up to my PC. If anyone has ever done this please email me
: and let me know how it was done. I have no problems with modifying
: hardware but I need to be able to continue running my PC as it is without
: changing my software too drastically. I would appreciate any help I can
: get. Thank you for your time.
:

Troy you cant get there from here, the only way to use it is to get the
file you want printed into the atari, and then print using atari
software. This is because the atari laser is a "dumb" laser that uses
the memory and cpu of the atari computer to compose the page, unlike a
postscript or other smart laser with memory and a built in processor.
The only other possibility is to network the atari and the pc, I
believe there is a midi net? for the atari somewhere out there and the
atari could directly access the hard drive on the ibm? but it boils
down to an expensive fix when just saving as text to a floppy would be
the simple elegant solution. the other answer is to scrap the atari
laser and get an hp4 deskjet with a printer switch box and the atari and
the pc could share the printer. Regrettably not a choice with the atari
lasers.....

sorry to be bearer of bad news...

cheers

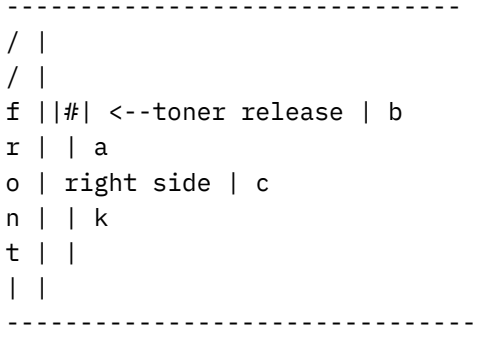
If you look on the right side of the SLM804 by the front, you will see
a light blue switch looking thing that if you push it towards the back
while opening the SLM, the toner/drum will stay down.



I hope this helps.

2434. ST Music compared to PC?

Newsgroup: comp.sys.atari.st
Date: 1997-05-14 00:00:00 UTC
From: godfather@ameritech.net
Message-ID: <337A4684.77D7@ameritech.net>
Source record: 122380

In the general opinion of the people in this discussion group:
I have quite a bit of music that I am looking to track out and was
wondering which platform I should use. I have a Pentium 200 with
Cakewalk professional, but I also have my Mega ST-4, and also my TT030.
How does the software/capabilities of the Atari systems compare to that
of the PC? (To be honest, Id rather do it on the Atari, just for
loyalty's sake ;)) What is the best software available, etc?

New at Systems For Tomorrow (May 14, 1997)
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~

NEW!!!
Tetris II Strikes Back for TOS Computers $12.99
Tetris II: Strikes Back includes all the fun and excitement of a traditional tetris style game, plus the enhanced Tetris II, where you have specific objectives to be carried out on each level. Both Tetris and Tetris II include a Two Player mode, and the optional addition of bombs to help you out of tricky situations.

Tetris II Strikes Back is available now in either an ST/STe version (Item#21165) or a TT/Falcon version (Item #21360) for only $12.99.

NEW!!!
Power Up! for TOS Computers $19.99
Power Up is a great top view racing game for the Atari ST,STe,TT, and Falcon computers that was inspired by the classic Rally Speedway for the Atari 800. It provides top notch racing fun. Power Up is also similar to the more recent Power Drive Rally for the Jaguar, with the notable addition of a Split Screen Two Player Mode..

Some of Power Up's features include: One or Two Players, 60 torturous circuits, brilliant 32 color graphics on all machines, full DMA sound support for STe, TT, and Falcon Owners, and Includes a track editor for creating new race circuits

NEW!!!
Iron Solder 2 for Jaguar CD $59.99
Pilot your 42 foot mech robot through 20 new missions against the evil Penta Forces. Dramaticaly enhanced 3D graphics create a virtual battlefield with war waged in all 360 degrees. Outfit your Iron Soldier with combinations of 12 weapons systems and begin your fight.

NEW!!!
Desktop Solitaire for TOS Computers $19.99
A GEM friendly implementation of EIGHT classic solitaire Card Games! Includes: Baker's Dozen, Demon, Fourteens, Golf, Klondike, Poker Square, Pyramid, and Scorpion. Requires 640x480 resolution in Monochrome, 16 or 256 colors. TT or Falcon recomended. For more info, and a playable demo, go to: http://www.SystemsForTomorrow.com/kordes
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~

Myst for Jaguar CD $19.99
Possibly the best graphical puzzler of all time.

Super Asteroids/Missile Command for Lynx $19.99
Battle Zone 2000 for Lynx $19.99
Joust for Lynx $19.99
Three great games for the Lynx!

Face Value for TOS Computers $69.99
Visual style GFA BASIC programing! A true must have for GFA Basic
programmers. For more info go to:
http://www.SystemsForTomorrow.com/kordes

Also Available:
All Things Falcon CD $9.99 Tons of Falcon PD/Shareware on CD
Infopedia 2.0 CD $49.99 Look it up! Includes CD & Driver
Hard Disk Sentry $39.99 Optimize that Hard Drive
Photo Show Falcon $9.99 View Photo CD discs on the Falcon
Card File 4 $29.99 Personal Information Manager
Moving Pixels CD $29.99 Software Collection /w sources on CD
ESG Clipart CD $19.99 IMG, CVG and GEM/s clipart on CD
Plus about 400 additional products for your TOS Computer!

>Does anybody know if there is a program that enables me to visit
>gopher sites? Thanks.

Check with your provider to see if they provide a gopher proxy. If they do, you can use CAB by filling in the gopher proxy line in the menu and adding GOPHER_PROXY and GOPHER_PROXY_PORT lines to the default.cfg file for STiK. I think this works with STinG too, but I had to give up on that program. Too many lockups reading graphics - looks like the old "JPEG bug" we had last year with STiK.

I'm using a 4meg Falcon, TOS 4.04 and HSMODEM7 if it makes a difference.

Source record: 122389

>How did you get it running so fast? On my megaste, I can't seem to get
>modem 2 working with CAB, even running hsmodem 7 and doing all the configs!
>

Do you use SCC driver from the hsmodem 7 ? This is the one that gives
you extra speed(Modem 2 and Serial 2 only).
I use Connect to get online, then enable STIK and its ok!! 115200 with
a ZOOM 28800 modem. You must set SERIAL_PORT = Modem 2 and BAUD_RATE =
115200 in your Stik default.cfg file and its ok!!
I hope i helped

Message-ID: <863602634_OASIS_@pcc-uky.campus.mci.net>
Source record: 122390

In article <5kvjci$r2p$1@mark.ucdavis.edu>
szhays@dilbert.ucdavis.edu (Eric Hays) said:-

>Who has a working copy of either of these files, and where/how did you get
>it?

I got it from an ftp site... Its 128.120.234.42 and its atari/WEB_Browsers/
WENSuite/ and the file is ws1701_e.zip (I think-but that should be close
enough to get you in there where you can find it!) This archive upacks just
fine and works on my Falcon like a champ, probably 2 times as fast as CAB.
That is, locally-loading .HTM files off my hard drive. I've not been able
to get it to work with my ISP. It has a trace option, and I sent this file
via E-Mail to OXO but I've never, ever gotten a reply from them (from 3
previous E-Mails) so I don't know if I will get a reply on this either. It
is basically dialing fine, connecting, going through the logon process
fine, then "errors" out when the PPP stuff starts. Hope you have better luck
than I did, but it does look like it has a lot of potential once, they get
all the bugs ironed out... See ya 'round CyberSpace...! :)

If I might speculate, it appears that current paid subscribers would be provided the password to access the web page. This is similar to Atari Computing supplying subscribers the web site address for the magazin disks to download.

Is Rod also offering an online magazine, via the web page, to new subscribers? I'm not sure - it's possible I guess.

Hi all,

This is an update of what items I have up on EBAY for auction.
Many PC items, some Ultima related items, a couple of Atari ST
games, a MAC game and a SNES game. Feel free to browse.

The auction ends May 20 1997, and thanks to all bidders.

Click on the item's URL to take a peek and perhaps bid on them or
for a summary. Thank you.

Hold down 'shift' when you select the link (I think).

You can also get it with ftp:
ftp://128.120.234.42/atari/Web_Browsers/WenSuite/ws170gb.tos

Ther is also a .zip version file.

Good luck!

From: greg_evans@delphi.com
Message-ID: <RdM6HXU.greg_evans@delphi.com>
Source record: 122276

Hi. I just installed Texel 1.6 and have had several problems. The most severe is that it won't print more than one page. I have 2 printers and tried both with the same results. I am using NVDI 4.11r6 and after 1 page prints the program exits on a Runtine error #204. Another problem is I can't get it to paste a chart. I've got OLGA running and the temporary file is created but it can't paste it to the sheet. i can't remember the error I get. Can anyone help? I also find the program _very slow_!

> Papyrus?

As a fellow Atari/HP5L owner I can offer the following: Depending on your version of Calamus, use the HPLJ4LET.CDT, and HPLH4LEG.CDT or the more recent HPLJIVMV.CDT driver that came with the August '95 upgrade. Personally, I'm using the LaserJet 4 drivers that came with Outburst (a commercial printing accelerator).

As for NVDI, I have version 4.11, so YMMV, but I used the Print Driver modifying program that comes with NVDI to change the 300 dpi resolution of the HP Laserjet 4L drivers that come with NVDI, to 600 dpi. Since I use Atariworks for most of my word processing, and the portrait/landscape routines in Works don't mesh with NVDI too well, I made two versions of the LaserJet 4L (which I renamed to 5L) driver, one in portrait orientation, and the other in landscape. This way, instead of using the option provided in Works to change the orientation, I simply have to select the different printer driver in the "Page Setup" or "Print" pages. Remember that NVDI measures margins from the edge of the printable area of the page, rather than from the actual edge of the paper, so you have to adjust your margin settings in Works (a drag, since it makes your ruler less useful). I use a Left Margin of 0.75 inches, right, 1.25; Top, 0.85; and Bottom, 1.15.

Not too much else on my machine prints with NVDI, although I have experienced problems trying to print from CAB.

From: jim <jrblackb@is2.dal.ca>
Message-ID: <337B3C9C.2014@is2.dal.ca>
Source record: 122280

Hello all
I have a program that was written in GFA Basic by some german colleagues. They sent it on a disk that is bootable on an Atari 1040 ST. The disk is readable by my PC, but obvioulsy I can't boot my machine with it, and I can't run the program I need (with a .pgm suffix). What's the best way to go about doing this? Do I need an Atari Emulator, or should I abe able to run it with GFA Basic (I can't get the version of GFA Basic I downloaded to recognize the program.) If I do need an Atari emulator, which is best for the 1040?

I'd appreicate any help anyone has to offer.

Jim Blackburn

From: JOHN LOCKARD <ZJKL10@east-tenn-st.edu>
Message-ID: <5lfgas$5m8@dazzle.etsu-tn.edu>
Source record: 122282

I'm giving away a 1040ST with monochrome monitor, external drive, modem, some books and software on programming, and other stuff. It's been in the back of my closet for two years now and probably needs a little cleaning and fixing up. (This was one of the first produced so the two inch drop techique will restore it's memory.)

The catch, shipping costs. It'll run anywhere from $100 ot $150 for a two week shipping by truck anywhere across the country. Or, the catchless solution, you could take two or three days off from work and drive down here and pick it up. (I just hate the idea of turning it into landfill.)

Just for the record, for a complex package such as this one, I believe a pre-release like this was extremely encouraging. Although I couldn't use it since PPP was not yet implimented, I downloaded it and looked through it anyway and noticed many people on this newsgroup had good luck with it using SLIP.

Remember, Peter is doing a service for the Atari community.

I'm the fellow:). Peter then followed up with a post saying that the IP should not be there for normal use (I forget the details). What it did do for me was cause cache.dns to be created, which wasn't there before. I tried removing the IP from the Route.TAB file and STING still works the same now.

Do you have specially compiled versions for 68040 with FPU as well or
is it only for 68020+FPU?

As a side note there is also a port by Doug Little with different
versions for different setups. The specific 040 version is faster than
the 68030+FPU. It hasn't been updated to 3.01 yet though.

>loyalty's sake ;)) What is the best software available, etc?

Probably the best MIDI-software for the Ataris is the Emagic Logic
2.5. It doesn't do audio, though. Note that you can also get Logic for
the PC and since you have such a fast PC it will probably run very
nicely on it (and you can have the audio version of Logic on your PC).

I have Logic 2.5 on my Atari Falcon 030 and it runs well on it. It
could be a bit faster, though.

Logic is certainly more versatile than Cakewalk.

Greetings, Jouni

I have a 1040 STe with SM124 mono monitor, additional external floppy, three joysticks, loads of disks (mainly from magazines, but a few professional products like DevPack ST), and a fair bit of PD and shareware.

It's all you need to start home MIDI sequencing, and it all works. I'm selling as I've just moved house and reluctanctly have to do my MIDI sequencing from my PC as I don't have room for 2 computers in the study.

I'll start by asking 150 UKP for the lot but will accept any reasonable offer. I'm prepared to deliver in the Edinburgh and Lothians region but any further away than that the buyer will either collect or pay shipping.

Dave.

Well, buyer after buyer has backed out on this stuff (which is ok, I understand!) so maybe somebody will make some interesting trades...

In case you forgot,

Supra Remvable Drive System with (7) 44 Meg carts, ST plug and go.
(I still really want to sell this, so how about $100, shipping included... work with me, people)
1040 STf
(I'd like to trade this for a Jag and a game or few.)

Other possible trades involve MIDI equipment or PC stuff.
Thanks!

5-14-97 >>>>>> [][] ATARI Clearence SALE [][] <<<<<< 5-14-97

I have accumulated quite a bit of atari stuff! I didn't realize it was
that much until I moved into my new place, and found I didn't have room
:) So it's time to thin out the less used items.

Item : Complete System
Computer : Mega 4 w/ 4mb RAM and TOS 1.04
Monitors : Monochrome * AND * Color w/ Monitor master
Monitor Models : SM124 and Goldstar SC1224
Software : Over 100 original games (100's of disks?) plus misc.
Comments : utils. Also includes joysticks, a mouse and mouse pad
Comments : 2400 baud external modem and the mega4 has the original
box

Includes whatever programming manuals/software that I might have that
you want. In short, if you want more (asside from the Hard Drive) w/o
paying more, (FROM MISC AREA ONLY) I'll pry throw it in
(depending on what it is)

Asking : $300 + shipping

Item : Complete External Hard drive setup
Host Type : ICD Link
Megabytes : 139mb formated
Type Case : Plus Impulse flat case
approx size: 13(width) 2.5(height) 14.5(depth) (inches)
Comments : Includes DMA cable, Power cord, ICD software
Comments : Plug 'n Play - Autoboot w/ICD
Asking : $150 + shipping

If you want something from the Misc area, i'll pry throw it in -
depending on what it is.

[-][-][-][-][-][-][-][-][-][-][-][-] [-][-][-][-][-][-][-][-][-][-][-][-]
M I S C
[-][-][-][-][-][-][-][-][-][-][-][-] [-][-][-][-][-][-][-][-][-][-][-][-]

If you want something listed below - make me an offer!

Item : ATARI LAZER 'adapter' box. I can't remember what these are
called.
Comments: But they are the boxes that plug into the computer
and the lazer printer plugs into this box. Comes with the
Lazer printer cord. And 1 DMA cable (as it's built into the
box) This box also has a DMA pass-threw.

Item : 6 (?) MFM hard drive mechs.
Comments: I don't know what works, and what doesn't. They all did work
when I put them in the box, but I cannot test them at this
point.

Item : Blitz Cables
Comments: Allows you to backup your software fast and easy!

Item : ST Sound Digitizer
Comments: Made by Hippo, includes software and cartridge

Item : Video 1000-ST
Comments: Includes Cart and german (paper) docs. Screen rez enhancer (?)

Item : Video Key
Comments: Lets you hookup your atari to a TV

Item : Mouse Master
Comments: Lets you click over between a mouse and a joystick on 1 port
(usually 0)

Item : 1040 power supply
Comments: Needs plug put back on (which I still have)

Items : SwitchBack
Comments: Difficult to explain what this is. This lets you save anything
to RAM or a file. (Not the best explanation, but best I
can do)

Items : Video Master
Comments: Allows you to take color (?) snapshots from your VCR

If you have any questions, or your interested in one of the items
listed above, Email me! All funds must be in US Dollars. I will ship
ANYWHERE.

```
The Swedish Atari Club (SAK) 970104
and NoCrew proudly present...

-------------------------------------------
T H E N O R D I C A T A R I S H O W '97
-------------------------------------------

Dear Atari friends,

It's once again time for the Nordic Atari Show, the annual get together
which has rapidly become a fixture for all Atari users.

Third time lucky, so they say, and as we are arrange the show for the
third straight year we hope to fulfill everyone's expectations and that
this will result in the best possible atmosphere. We've gotten a certain
amount of criticism, both positive and negative, from those who have
attended the shows in '95 and '96. We've taken heed of the suggestions
made and we're once again off and running!

- WHEN AND WHERE?

This year the show will begin on Friday, June 13 and end on Sunday,
June 15. This is the weekend following the beginning of the summer school
holidays as well as the weekend prior to the Swedish Midsummer
celebrations. We'll open at 1 p.m. on the Friday and close at 6 p.m. on
the Sunday.

The show will take place in Gothenburg, just has it has in previous
years. The exact venue has not yet been established. We're still looking
for the cheapest location. The likeliest possibility is Kortedala
gymnasium, where it was held last year or some other venue, nearby.

- WHAT ACTIVITIES WILL BE HELD?

* There will be an Exhibition Hall will dealers, distributors, ShareWare
programmers and a host of other interesting personalities. The usual
meeting place for all those not wanting to "hack". This is also where
the Swedish Atari Club will be found supplying information, sale of
PD-disks, the club magazine's TT, the BBS, etc. We'll also have an area
reserved for a swap meet where you can buy, swap or sell single copies
of Atari related material and a "soldering corner" for those of you
wishing simple repairs done.

* A "Hacker Hall" where demo and other programmers can gather for
competitions and swap demos and all kinds of code. NoCrew is the
Swedish demo group who will see to it that everybody takes part and
enjoys themselves. Those of you hungry after rewards in the form of
```

prizes will be well taken care of. Exactly WHAT prizes these will be hasn't been established, as yet.

* Seminars with a number of well-informed lecturers. Last years seminars were very much appreciated, something of which we naturally have taken notice. The seminars will cover a variety of subjects (i.e. MIDI ercording/editing, DTP, hardware, programming) where the above mentioned "well-informed lecturers" will demonstrate his subject directly on a computer in order to provide the audience with practical examples. We'll also hold the seminars on different days and at varying times so that you won't have to miss the chance if you don't attend on a particular day.

* Minor competitions such as "A-Z on the Keyboard" (a much appreciated contest last year), hard disk throwing (this year we WILL succeed!), network games, juggling, etc. Everything depends on our finding volunteers to act as game leaders and judges. There will be prizes for the winners.

* A refreshment stand will sell non-alcoholic drinks, sweets, chips, etc. We may be able to arrange quantity discounts at the local pizzeria as well as other bonuses.

- WHAT WILL IT COST?

If you intend to attend all three days, you cheapest solution is the Three Day Pass otherwise a Single Entry ticket will do:

* Three Day Pass ... SEK 100:- (about UKP 8.50)
* Single Entry ..... SEK 50:-

These prices include full access to all the activities being held during NAS97.

- WHY SHOULD I ATTEND NAS?

The answer is simple: because you care about the TOS platform. We Atari owners are becoming fewer and fewer and a get-together like NAS is a simple way of seeing what's happening in the Atari world (no, it's not dead!) and meeting like-minded Atarians and hearing what kind of tips, ideas and visions they have.

- HOW CAN I FIND OUT MORE?

Information will be distributed regularly in the same way as this text file. In addition, we have a number of other sources of information where you can find out more about the show depending on your own resources.

* Our mailing list (E-mail). This will provide the very latest information to those on the list. To have yourself put on the list you MUST have an E-mail address. Send us a message on "nas-users-request@tripnet.se" with "subscribe nas-users" in the body of the text. Don't forget to include your E-mail address.

* Our home page on the World Wide Web. This has been in existence since last year and we'll try to update it as often as the information for the mailing list. The home page will contain more detailed information concerning times, schedule of events, directions on how to get there, competitions and housing.

The address is "www.tripnet..se/sak/nas".

* STraight BBS. This is the Swedish Atari Club's home BBS. Information concerning NAS will be included in the SAK menu. You can also use this BBS to ask any questions you may have. The telephone number is: +46 31-336 39 73.

* Our club magazine, "AtariMagasinet", will contain adverts with more detailed information concerning NAS97 in issues 1/97 and 2/97. This is the largest mailshot we will send to our (SAK's) members.

* Our show co-ordinator is Rolf Johansson. He's supposed to know everyting there is to know about NAS97. If you have questions to which you've been unable to get answers anywhere else you can send him a message at "rojo@tripnet.se" and you'll get your answers. If you wish to get into direct contact with him, he can be reached on his mobile 'phone on +46 70-669 52 35.

WE'RE LOOKING FORWARD TO SEEING YOU AT THE NORDIC ATARI SHOW 1997!

I present here my two most recent software which I hope they interest you.
they are progammed by Turbo C++ and run under Windows(3.11 and 95).
here is a short description of these two software.

1-Robot Spy 1.0
at my knowledge, this software is the first and the unique of its kind.
This software allow you to spy your friends who are on the net at the same time
of you, it permits to see exactly what they do on their screen, pixel by pixel,
anywhere, in the world, at the condition they are connected to the internet.
how does-it work?
it's simple, you send a file to the person you want to spy telling to him it's a
game or everythings else, the objectif is this person run the file. from this time,
a batch file is installed on his computor, and everytime this person use internet,
this batch connects him secretly on our server.
on your side, you , after the installation of the other part of the software every time
you want, you can connect on our server with your password and have the list of all the
persons who received your batch and who are connected at this time.
the only thing you have to do is to click on the name of the person you want to spy.
a window opens containing exactly the screen of the person spied, you can have
ten pictures per second with 256 colors, if you switch to balck and white mode you can
onbtain a real time sequence, approximatly 30 pictures by second.

Robot Mailer 1.1
The message you are reading presently is sent to more then 20,000 newsgroups with
this software. This program automates FreeAgent, and reach with a connection of 28,8 Kbauds
5,000 news per hours. It can also find a maximum of 50,000 e-mail adresses from internet
and
send a message in 4 or 5 hours. You can obtain with this sofware the most powerful tool of
mass transmittion on the internet.

Robot Spy 1.0.................20 US$
Robot Mailer 1.1.............20 US$
Both.............................30 US$

I'm sorry i can't accept credit card, but you can send an international money order to:

Ben Hedi Nassef
1481 Ste-Catherine est #7
Montreal, PQ, H2L-2H9
Canada

Don't forget to include your e-mail on a paper, you receice the software ordered in your
e-mail the day we receive the money order.

2489. Atari ST Emulation FAQ

Newsgroup: comp.sys.atari.st
Date: 1997-05-15 00:00:00 UTC
From: cronos@NOworldaccess.SPAMnl
Message-ID: <N.051597.125101.71@wxs2-1.worldaccess.nl>
Source record: 122406
Cross-posted to: comp.emulators.misc,comp.sys.atari.st

Hi there!

Robert Goodwin and myself have nearly completed the first major overhaul of
the GEMulator FAQ. As we've seen it fit to add information and details on a
variety of other Atari ST Emulators (right now STemu, STimul and, of course,
PacifiST), it has been renamed to "Atari ST Emulation FAQ".
It will be mailed to the former GEMulator FAQ Mailing List (now Atari ST
Emulation FAQ Mailing List) and to the usual newsgroups on Saturday. If you
have stuff to add (questions, software compatibility or incompatibility facts,
etc.), now would be the best of times to do so.
Thanks for your time.

It always helps to read all the text. It's clearly said on my homepage=20
where STinG is to be downloaded that PPP isn't complete yet. If you got=20
the package from some BBS or ftp server, kill the person who uploaded it=20
without that note on PPP. ;-)

Sorry for your wasted efforts. As you seem to live in Denmark, you might=20
want to visit the Nordic Atari Show in Gothemburg, where I'm gonna=20
demonstrate STinG, possibly already with PPP.

Cheers Peter

> How are we suppose to know, when the examples says it works ?

Which examples ? There are none. Do you want me to blame that I did not explicitly disable the PPP buttons ? Apart from that, there is no hint at all in the package that PPP should work. And it's said everywhere that this is a beta, and thus might show even much more bizarry bugs (which I hope it doesn't ;-))

If you got a proper release package, then you may blame me there is no explicit hint that PPP doesn't work yet. I've put the package on my web page to give more people the opportunity to try it out, and many of them did so with success, because they used SLIP. Although it's an honour for me that the package is already in so many BBSs, and maybe ftp servers, I'm not really pleased by this because the direct way of information from me to the users is lost. If it's only on my web page any update will be seen by anybody who looks for it, while on BBSs outdated versions might prevail for years. This is bad for beta state software IMHO.

I've thought about measures against that. I'll certainly include another README into the package stating that PPP is only halfway finished. But this only eases symptoms a little, but doesn't cure the problem. For the latter, I'd have to revert to my old beta version mailing list, which I won't allow to exceed one or two dozen people. As the last version of the list already comprised 20 people ... Is that what you want ? I guess it's not ? Do you have any other ideas how to resolve this ? If so, please tell me, I'll happily check 'm out.

Cheers Peter

PS.: This was not intended to sound in any way angry, offended, or even offensive. But I'd like to address this problem somehow.

2492. Wensuit version 1.70f

Newsgroup: comp.sys.atari.st
Date: 1997-05-15 00:00:00 UTC
From: jdierten@Inter.NL.net
Message-ID: <5lef3q$6g0$1@news.Eindhoven.NL.net>
Source record: 122409

This morning I downloaded the newest demo-version of wensuite. Since several authors aperently managed to build a ppp connection with this package, I thought I might give it a try. My experiences are not so good. After filling in the script forms I made the program to dial for connection. After connect I see a short message about the ppp connection and then the modem disconnects. I've put the recomended little program in the auto-folder, disabled HSmodem and my script was okay. (In the script menu I used %p for password, not %d as in the documentation, which one is it anyway?)

Anyone got an idea?

You can try ParcP which is an FTP-style more connection through a special
Parallel port cable (instructions are included in the package). There are ST,
Dos and Linux executables in the package. As I said it's more like FTP then
Ghostlink, but it is faster.

You can find it on Hensa or umich I think.

Are you looking for PC software or ST software to do the job ?

I'm not aware of any PC software that will read those formats, but there is
always good old Gemview on the ST that will do this. You can find it on most
Atari ST FTP sites.

If you don't have an ST, try getting PaCifiST which is an ST emulator for the
PC, and then run Gemview from there.

This is all the my Quick FAQ, by the way (see .sig below)

The point of Beta testing is to debug a fully functional package. It has to be a fully functional package to be properly debugged. In my opinion, you shouldn't have made this incomplete version widely available to users.

And yes, if PPP does not work in your Beta, then you should disable the option.

Now, a good question is, what was your motivation to release the package in such an early development version ? Publicity ? To prevent people from buying CAB 2.0 ?

>If you got a proper release package, then you may blame me there is no

Then why did you make it available in the first place ?

You could also specify on your webpage and on a readme in the package that you do not wish to see this beta distributed elsewhere.

>
>I've thought about measures against that. I'll certainly include another

I think this is a lot preferable to freely distrbuting an incomplete package.

>
>Cheers Peter
>
>PS.: This was not intended to sound in any way angry, offended, or even
> offensive. But I'd like to address this problem somehow.

The first example of widely distributing Beta versions came from Netscape.
Originally a Beta is a restricted distribution of a complete package in order
to iron out bugs. If your distribute such a crippled package, you will make
frustrated customers and bad publicity. You will also make the development
process harder to follow.

Doesn't answer the question, does it? ;-) I've found the UK support site now,
it's none other than good old CyberSTrider. I'll try the demo of Thing before
making a choice, it's quite a bit more to register than Gemini and I haven't
got money to burn right now :-/

So you had decided not to do it? :-)

I'm not sure you will need the acceleration on a TV anyway as I guess it will
be fast enough as it is on a TV/RGB. Ofcourse it can't never be too
fast. :-0

I'm looking to buy an Atari 1040ST. Must be working. Should be no frills, but if you've got extras, I'd like to hear about it.

If you want to trade for an Amiga 500 I've got one sitting around. I've been looking to get hold of one at a reasonable price for a while.

wiggins@imcs.rutgers.edu

Thanks!

John

Hi all,

This is the midpoint update of some of the items I have up on
EBAY for auction. Many PC items, some Ultima related items, a
couple of Atari ST games, a MAC game and a SNES game.
Feel free to browse.

The auction ends May 20 1997, and thanks to all bidders.

Click on the item's URL to take a peek and perhaps bid on them or
for a summary. Thank you.

http://www.ebay.com/aw/seller-list.cgi?email=br191@torfree.net

---
START

Hi dietz@ticco.ccipe.montp.inserm.fr, on 15 May 97 you wrote:

d> I remember having heard of a program named CHK_OFLS.PRG (in the
d> context of the
d> SED Disk monitor). What is this program for and where can I find it?

It checks for open files which may be corrupted by disc utilities in a
multitasking environment.

I'm afraid I don't know where to find it but guess it must be PD.

m>
m> There is no demo version of Gemini...

I suppose that is true ... it's Shareware with no restrictions. I have v1.99.

I don't know of a UK support site but maybe some fans will join in this
discussion. What's the problem - if any :)

P.S. Ah, I see that you have nailed Danny as UK support :)

Well, if that is the case, there goes another years sub in the shitcan.
Anyone thinking of publishing another TOS interest magazine should
look at Atari Computings three issue deal. Or, I should say anyone
thinking of subscribing, don't unless you can get the same deal.

While i'm here, i'm beginning to get pissed at a few in the commercial
TOS market. I haven't said the word *&$% in a while (at least a month)
in the NG, but I am really getting impaitent.....

It sure would be nice if you would allow the use of modem ports other
than just modem1. I would think in 1997 that there would be support
for all the RS-232 ports on the TT and MegaSTE.

The ascii script is fine for CHAP since the information needed for
chap is included in it.. the tcp stack is what needs to be able to
handle chap.. encryption can be done as needed..

2532. ATARI items forsale<USA>

Newsgroup: comp.sys.atari.st
Date: 1997-05-16 00:00:00 UTC
From: Scott Boesken <scottboesken@harborcom.net>
Message-ID: <337C2142.4150@harborcom.net>
Source record: 122312

Atari items for sale: For the ST family. 8 bit stuff at bottom of list.

1. Actual Atari mouse with Atari logo on it. Two buttons and a DB9 connector. Used.

2. Stereo Master for the ST & STE. by Microdeal. Has a cartridge port input box, software and cable.
Comes in like new condition in the box with all paper work and user manual copyright 1991. Real time digital sound effects and will interface with a external MIDI keyboard. Plays frequencies
from 3.0 to 28 Khz in ST mode and 6,12 and 25 Khz in STE mode. Pretty cool. Like new.

3. PageStream V1.8 This a earlier version of PageStream. Comes complete with 2 floppy disks, a three
ringed binder manual and a printed box to hold everything. This is one heck of a desktop pudlisher
program. Good condition.

4. Golden Image Deluxe Paint with animation. Comes with 3 disks and manual. The program does graphics,
fonts, animation, printing and the whole shabang. Serious graphics program. Like new and alot of fun.

5. Lemmings. 2 disks and a manual. This game is a good time, than Doom come along. The Lemmings
keep comming and you must get them home. Level after level... they never stop... then ya nuke 'em.
Good graphics, Very good condition.

6. Zany Golf. 2 disk program. It's miniature golf on the Atari. What a hoot this game is. Very realistic
action. Mouse driven with very good graphics. This program made me late for a wedding once. No, not my own, THAT is another story.

8 bit stuff:
1. Atari 800 computer with BASIC XL catridge. It has 3- 16 meg modules and 1- 10 meg memory module.
What do you need that much memory for? Do you work a NASA? 2 cartridge slots, and my favorite, 4 (joystick) DB-9 ports. The Basic XL cartridge comes with manual. Computer comes with transfomer and printed computer cover. Ready to go, very good condition. Just add a television
and floppy drive. Which reminds me.
2. Atari 8-bit 1050 floppy drive. This 5.25 external (get it?) floppy drive comes in the box (which is rough)
and ready to go. Very low hours on the drive which is in excellent condition. My friends brought me up
to 16- bit ST very quickly, hence the low hours on this drive.

Submit your offer, as sig members requested, to me e-mail only. I need to get these items out of here and
I would like them to be put to good use!
I am in Ohio U.S.A. for shipping concerns. My e-mail address again is scottboesken@harborcom.net.

I know, I know... :-(((((
The thing is that I'm going to the states the same morning as NAS
starts. :-(

I don't think Titan or Doug will come as I wont be there. ;-)
Seriously so did I talk to them and as we have some thoughts of doing
a project together it would be a good time to meat but as it turned
out I wont be at home and the last thing I heard from then they were
busy and didn't think that they would come. You could ask Tom at
FPC. He might know as TD was suppposed to meat Tom as well.

BTW. We did meat last year. :-)

> : Atleast it sounds like NAS will have some interresting stuff this year.
>
> Yeah! New Beat Development will be there, at least two of us!

I hope more people will be there as well.

You have to talk to Johan and make sure that he atleast turns up and
maybe bring his AB040 if noone else will show it. I think you have to
start talk him into it now if you are going to manage it...

And he lives just near by. :-)

>not seem happy with the Atari.

Hi Steve!

As I've said elsewhere, I had similar trouble with fonts from the 'Monster
CD-ROM': They worked fine with NVDI3 but 4 reports them damaged!
Has _anyone_ found a solution? (Yes, I have font checking switched off).

Regards
Peter

>I would like to know if it's possible to plug a videotape (scart
>connector) on an atari SC1224 screen...
>If 'yes', how ? thanks...

Hi Olivier

I don't know about plugging to a _screen_, but my Philips CM8852 monitor is connected to my Atari via a lead with a SCART connection. If the SC1224 doesn't have such a connector, you would have to make up or buy a suitable lead from the 13-pin monitor socket to a SCART - possibly conncted in parallel to the wires going to your monitor so that you could see what you were recording. Alternatively, you could monitor on a TV connected to the video recorder.

Do bear in mind that you will get the black surround that's typical of Atari's less-than-full-screen output.

Regards
Peter

>I have a CD-ROM with 1000 TTF fonts on it, and I can't get a one to
>work right. Just a very few I've found on the net seem to work okay.

Hi Jared!

In my message I should have mentioned that I couldn't use the TT fonts on my Atari straight off the CD-ROM, as they were compressed, I think. Their filenames all ended with one or more underscores. I got a friend with a PC to load and extract them for me and put them on DD floppies for copying to my hard drive. After that they worked OK with NVDI3 but won't load into 4. I hope to get Speedo 5 soon and see if they will work with that.

Regards
Peter

I pretty sure that a version of Chk_ofls was released with the
Kobold I purchased(2.5e), so it may be found in the file copying
sections of ftp archive sites. I don't know - haven't looked.
But in a multitasking system, file copying can be stressfull! :^)

2541. Re: "Papyrus" (4) compressed?

Newsgroup: comp.sys.atari.st
Date: 1997-05-16 00:00:00 UTC
From: mc9931@mclink.it
Message-ID: <5li2sa$ce@news1.mclink.it>
Source record: 122321

Papyrus 4.25 (UK release) takes about 15 seconds to load on my Falcon
(MagiC 4- NVDI 4.10 - 800*600*16 colours) with 100 fonts installed.
To reach this speed I had to depack it. IIRC, at least the UK version,
is packed with ICE. The Papyrus decompressed size is about 680Kb
(430Kb packed).

Source record: 122323

Sheer Agony ST/Ste/TT (1996) $20.00
Paladin (1988) $5.00
Captive (1990) $12.00
Ishar 3 (1994) $15.00

and the rarest of all: Ultima 6 $best offer

Note: The box and booklets to this are a little worn, but not badly.The spellbook and reference guide is included but not the actual instruction book, however, *any* version of Ultima 6 instructions is identical, so you can find a PC version used for cheap (common)a nd you'll have it, plus if you are familiar with the Ultima series it is easy to figure out. And this is rare on the ST after all,to a collector it should be worth something.You tell me how much.It is a great translation,especially on my 16mhz STe.

all games include box,original disks, and instructions

boxes are not perfect condition but not all dented or totally messed up at all

all prices include shipping to anywhere in U.S. ,you pay shipping elsewhere

> About $18/month telly and $20/month ISP.

I know about the prices. I m used to pay HUGE telephone bills. My worse
frustrations comes, when i can t get the damn software to work, while seeing the
linie clicking for each penny i own.
I know the author is probably trying to make a good effort with his program,
unfortuanlty i just don t agree to this last version and how it has been
distributed, with the lack of information about the not working PPP protocol,
which he knew and stated on his Wep pages, but unfortunalty not within the
program.

2545. Help: DHS Demolition demo on Falcon VGA

Newsgroup: comp.sys.atari.st
Date: 1997-05-16 00:00:00 UTC
From: aardvyrk.no.spamm@cris.no.spamm.com
Message-ID: <337cb34b.3651569@news.cris.com>
Source record: 122325

Hello there. I can't get the Dead Hacker's Society Demolition demo to run on a VGA. Usually res_fool does the trick, but it might be the Keyboard Gizzmo that's screwing it up. It gets to the "Sentry 2.2 by Eagle" screen as I start up in 256 (or really any rez) and then hangs after about 10 seconds, with no mouse, but easily warm-resetted. Anyway, I was wondering what the success of this demo is, and what hardware, because I really wanted to see this, and I can't get a good signal to get out to the TV, but maybe that's the only way. >sigh<

I also note that one of the Chaos demos won't quite run since I either installed Stoop 2 beta or the Keyboard Gizzmo...

Any suggestions appreciated, and thanks.

Amazed by the fusion of math, motion, sound, and attitude,
aardvyrk@cris.com

Centurion Ministries

A Computer Ministry For needy Christians

Centurion Ministries is an outreach ministry providing free computer and peripherals and software to needy Christians and Christian Familes.

We can use almost ANY used computer! But please, keep you antique systems for the collectors!

We can use: Atari ST's, IBM systems, even XT's, laptops, Amiga, Commodore 64/128's, and certain Apple systems. Plus various peripherals and software.

We operate under the El Shaddai Christian Fellowship and can offer tax-write offs to those who donate.

We are always looking for more equipment and software. If interested please respond to the following email address: ab453@cleveland.freenet.edu

or regular mail: James W. Krych
Centurion Ministries
3969 Clague Rd
North Olmsted, Ohio 44070-2306

Thank you! Take care and God Bless!

Regards,

James W. Krych

I really like my layout.

>* Some of the descriptions are rather unclear or plain incorrect, and many
>of them are too short to give an idea of what the software is. Rather than
>having something like "Clock", it would be better to have something
>like "Corner clock showing date and time with alarm facility".

Rather than saying that something is incorrect, I'm waiting for you to
correct these errors, not only saying there are !
And for the description lenght, as I said before ... only a few words.

>* The list should be available in some standard database format, such as
>an ASCII comma delimited database.

It's a good idea.

>* It might be worth having a set of (sensible) catagories, with one
>alphabetical title sorted list and one catagory sorted list.

I really don't like this idea because it's like walking in big shop
where everything is ordered by kinds ... you can spend a lot of
time/money in these shops ... so I prefer the way I did, you can enjoy
it as a good dictionnary.

>* The latest version should be listed with each title (or is it listed
>already? I can't remember). It is important, therefore, that software
>authors send information on updates very regularly. To encourage this,
>it is important that it is easy for authors to send information about the
>software. This could be helped by having a simple and clearly laid out
>form on the WWW page, as both an HTML form and ASCII text, that can be
>filled out with relevant details to get an item added to the list, or to
>update an existing item in the list.

This is too much work and too precies data people really don't need,
because if they want to know what's the latest version, they go to the
related page to find it out ! I really don't want to put all these
data on my page ... unnecessary.

>* A list of the most recently added or updated items (within the past
>week, for example) would be useful.

Timeless.

>* It would be useful if a mailing list was available where all the updates
>to the index would be posted regularly, say once per week or so, depending
>on the frequency of such updates.

Timeless again.

>There probably are other additions or changes that would also help the
>list, the above are merely some ideas that I came up with in a few minutes
>after reading the list.

You must know that the list has already taken a few hours to create
and maintain.

>Despite the above suggestions, which may be viewed as criticism, I
>believe that the index is a brilliant idea (I was thinking of doing
>something similar myself, in fact) and I wish it every success.

Criticism is not only needed but is what I'm waiting for from readers,
but I have made a concept of this page and won't to change it too much
because time/money and also time/money and perhaps time/money ... I'm

already very active in the Atari world with the management of the Midi Comedie Club, electronic music compositions, a lot of atari dedicated web pages ... let's go to the below address and you'll see. then thank you for everything, but the only way I want to continue this page is to add new addresses, mentionning links errors and waiting for people who really want to help me by sending correct data to avoid errors on the board.

Also, if you are really interested to contribute to the whole concept, why not try to put your ideas in my work, it could be interesting to see what it could be done ... If you are really interested by, I can send you the page and we will see if we can merge both concepts ... what do you think about ?

Sincerely yours
Jo

Source record: 122250

```
Croft Soft Software
Press Release: 16/05/97
-----------------------------------------------------------------

Atari Times
-----------

Issue 9 of our popular disk magazine 'The Atari Times' marks its first
birthday. To mark this, we have produced the biggest issue ever :)

This issue has contributions from:

- Matthias Jaap
- Richard Spowart
- Ashley Seabrook
- Robert Goldsmith
- and a few more people...

The Atari Times can be obtained from the following sources:

- Croft Soft Internet Publications
http://www.users.zetnet.co.uk/polonowski/

- 42BBS
01256-895106

- Floppyshop
PO Box 273, Aberdeen, AB15 8GJ, Scotland, UK

- Any FAN connected BBS

- Direct from Croft Soft Software
Send SAE, and disk to:

Atari Times
c/o Colin Polonowski
The Croft
Hope Rd
Nibley
Nr Yate
Bristol, BS17 5JH

We are also considering starting a email mailing list from issue 10.
If you want to be included on this list then send an email with a suitable
request to:

polonowski@zetnet.co.uk
```

People on this list will also recieve any press releases from Croft Soft Software.

Mole Mayhem

It's still not finished unfortunately! We have had a few technical problems with the Falcon sample routines as well as a small setback on the music front!

While we try to sort these difficulties out time is also being spent on designing the last few levels.

We are currently unable to give a release date but hopefully it shouldn't be much longer!

Croft Soft Internet Publications

Croft Soft Internet Publications is still being developed. It consists of a number of different sites, not all of which are Atari related.

There are a number of new guestbooks so if you visit please do take the time to fill one in!

Visit CSIP at:

http://www.users.zetnet.co.uk/polonowski/

Text Editor

We are currently investigating the possibility of developing a new text editor for all Atari computers. We realise that the Atari market is currently flooded with them but if we do go ahead we will aim to make this one something special.

We have no solid plans but some of the features will hopefully include:

- Full modern GEM interface
- Compatibility with all major Atari operating systems
- Large powerful dictionary
- Fast operation
- Search and replace
- Macro's
- Support for a number of file types such as STOS *.BAS files and others
- On-line ST-Guide and HTML format manual
- Full support for multitasking systems such as MagiC, Geneva, Multi-TOS, MagiCPC and MagiCMac.
- Make use of available hardware - FPU, Nemesis etc.
- Compatibility with low memory systems

As stated above, this is only a posibility. If we decide to go ahead then work will begin once Mole Mayhem is completed.

2555. FS: Atari Computer Goods! Some Shown! FREE Catalogs!

Newsgroup: comp.sys.atari.st
Date: 1997-05-17 00:00:00 UTC
From: bensmith@linda.teleport.com
Message-ID: <5ljt20ioc1@linda.teleport.com>
Source record: 122251
Cross-posted to: pnw.forsale,comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech,abg.atari

For Your Information I've been sick for the last month. Plus exhaustion and being overworked, I needed to check into a Hospital. I'm recovering and time will show how long I need to get to full speed. I'm still working to support Atari Lovers and Users. If I seem unresponsive and slow please bear with me. I'm doing my best.

Following is only a partial list of what's in my Computer HardWare & SoftWare Catalogs. Everything mentioned on this list is on this list because I have multiples of these Items and I thought I'd list them for you. Especially if you wanted to buy More than one. So check it out!!!

Check out my Updated Atari Catalogs and find More Atari stuff! I've got HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers, Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks, Labtec Speakers & Under the Monitor Power Directors to Manage & Protect your Equipment. And Hardware specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141 Monitors, Atari 1050 Disk Drives, Indus GT Smart Disk Drives, Paddles, Koala Pads, Atari CX85 Numeric KeyPads, SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: 1040STF Computers, Spectre GCR Macintosh Emulators, MonoChrome Monitors, Monitor Master Switch Boxes, Mouse Master Switch Boxes, Hard Drives, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST and Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II and Scenery Disks, Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, ST Karate, Ultima V, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials. This and more you'll find in my Atari Catalogs!

See my Web Site at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking for. Something you might want. Even Something you may of Forgot! At BSC's Web Site you can View, Capture &

even DownLoad Atari Catalogs or E-Mail BSC at the Web Site! Or Request Catalogs by E-Mail. Do You Have problems Reaching BSC's web Site? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. I will get back to you after the weekend. Please let me know if I can't attach files to your E-Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you tests JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. And one of the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page. Go directly on the web at: www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

>
> So why ask for input ?

This is the way I make propositions but as I explained I can't do more
and more ... there will be no end to that. My service is limited like
everything in the universe ... It's a choice, and for me the only
good one. Time is so precious.
But I NEED SUPPORT !
Please, only understand I cannot consider a whole remodelling of the page ...

EXCEPT IF SOMEONE IS DOING THAT HIMSELF WITH RESPECT OF MY WORK ...
Why not working together ?

I have ask to Mario who has very good ideas and even was ready to create
this page himself a few time ago.

.. wait and see !

Bye.

What exactly do you mean by "List Server"?

Are you referring to software that will maintain a mailing list on the
internet? If so, software like smail is already available.

Otherwise, I don't quite know what you mean there.

Hello,

I have a real collectors piece here. A new Atari PC4 IBM PC for sale.
PC comes with all original books, disks, and box.

Atari PC4 PC
Serial Number : 124 <-Yes #124 not too many around
286-16 CPU
Two video ports (analog and digital) for MDA, CGA, EGA, and VGA graphics
1 Meg of RAM expandable to 8 Meg
32 Meg hard drive
1.2 Meg 5 1/4" floppy
Has Atari labeled MS-DOS and Windows
Atari Keyboard
Can use Atari ST 3 1/2" external floppy drives.

Unit is new and in great condition and works fine. Asking $150 shipped in USA

E-mail me or call 216-729-0761 evenings 6:00 - 10:00 PM EST

Requested minimal specifications:
-----------------------------------------------
MEGA-STE 4 Stacy 4
---------- -------
TOS 2.06 TOS 1.04
4Mb of Ram 4Mb of Ram
Internal HD Internal HD
-----------------------------------------------

Internal HD capacity is not important, as replacement SCSI drives
are available locally, but I do need that Internal SCSI controller.

Preferably offers from within Canada or, if the deal is right,
from United-States... although I would rather avoid the burden
of Canada Customs if buying from the US.

e-mail offer and details (condition of equipment, included goodies),
and specify the currency when quoting your offer.

See my homepage for more details and possible trade-in solutions
on other Atari good I have for sale.

2562. FS/FT (CA): 4160STE & Megafile 60

Newsgroup: comp.sys.atari.st
Date: 1997-05-17 00:00:00 UTC
From: q-funk@REMOVE.ANTI.SPAM.FIRST.megacom.net
Message-ID: <5lkh7nuk1@cti01.citenet.net>
Source record: 122258

```
For Sale:
---------

* 4160 STE (TOS 1.62, 4 Mb)

* MEGAFILE 60

Canadian offers only! Will sell to best offer, or trade both
together for either of the following:

* MEGA-STE (TOS 2.06, 4Mb Ram, HD Floppy, Internal SCSI HD)

* Stacy 4 (TOS 1.04, 4Mb Ram, Internal HD).

Internal hard disk size un-important, local prices on SCSI drives
are rather affordable.

NOTE: nothing against our friendly neighbors from down south,
just Canadian banks causing troubles for cashing foreign
currency of any kind, including American.

However, if you're interrested in trading your MEGA-STE
or your Stacy, we can arrange something, as there is no
currency exchange involved.

More details available on my homepage.

From: "Manifered H. Wolfe, II" <lobo@vicon.net>
Message-ID: <337DCEEE.6F90@vicon.net>
Source record: 122259

Hi! I recently got a MIDI keyboard to use with my TT to creat music in standard midi format for PlayStation games I'm writing. This is my first time using a setup like this as I previously have written MIDI's with a mouse and that's very tedious and more difficult to come up with stuff on the fly. Anyway, here are my questions:

Does Cubase work on a TT?

Will Cubase Lite be good enough for what I want to do?

Where is the cheapest place to get this software (either Cubase or Cubase Lite)?

Is it compatible with Magic? I have 4 but am upgrading to 5.

I think that's it. Thanks for you help!

Did you remove HS Modem like they said?
I tried 1.70g and seemed to get a PPP connection, however when
trying to resolve a site I get a DNS resolve error. I monitered the
trace_log file between the last two versions, and there is a difference,
but the the DNS cache error is still present. It seems to work fine
on this Falcon, except in the PPP config menu. The saving of paths
is not working, but the folders are created (mail,news,cache).

If you're using one of the SCC-ports (I can't remember what's what...) you'll be fine. To get
DTE-speeds over 38400 you'll have to use the modem.cpx or something, as pppd doesn't recognise
higher speeds. I'm using MiNTNet/pppd at 57600 here with no problems, with the speed-settings is
~/.ppprc commented out and modem.cpx set to 134 baud (== 57600 with HS-Modem.). 115200 should also
work (modem.cpx set to 150 baud.), but that's not necessary with a 28.800 modem.

You need and ASCI to SCSI adaptor such as the Link 2 or Link '96. They
come witht he software that you will need, you should be able to find
peopel selling them by doing a web search os by placing a wanted ad
somewhere.

Hi,

Just to clear the air on this issue, an announcement has not been made that Current Notes will no longer publish. The publishers do this as a hobby and as such it is done in their spare time. Time is the issue here, or lack of it at the present moment. Computer Direct is a regular advertiser in this magazine and we have not been approached for a new advert in quite some time.

I think a public announcement in regards to the status of Current Notes should be made, the Publishers owe this at least to the subscribers with remaining issues...

Rumours are not a reliable source of information, but if the Publishers do not take steps to announce their intentions, the rumour mill will spin wildly.

So, how about it guys, Do you plan on ever Publishing another copy of Current Notes?

All the best,
Chris @ Computer Direct

CHK_OFLS.PRG comes with the file manager package KOBOLD. You can get
it from APPLICATION SYSTEMS HEIDELBERG (ASH).

Have a look at HTTP://members.aol.com/ashinfo

Having sold my Atari ST some time ago and replaced it with a PC, I was surprised to find, in the back of a cupboard, (as these things usually are), a series of ST related books. The list is appended below. Rather than just throwing them out, (which I think is a sad end for any book), I'd rather see them go to an appreciative home.
If anyone would like to make me an offer for any or all of them, just drop me a line (SteveTetch@AOL.COM). The best offer secures and the buyer pays postage, (from Essex UK)
.
And now the book list:

GFA Raytrace - User Manual
GFA Basic - User Manual
GFA Basic - Advanced Programming
GFA Basic 2: Advanced Programming
Atari ST - The advanced Programmer's Guide by Mark Harrison
Writing Strategy Games on your Atari computer by John White
Atari ST Tricks & Tips (Abacus Software)

Yeah,

Save the downloaded data using the 'save file as' in Netscape's edit menu.

Tip: Let the data download to screen first (as if it were an image) THEN
save as. This will in effect mean downloading it TWICE! Otherwise 'saving as
before full screen download can result in corrupt or broken files.

It will save to a default name.

Source record: 122178

..sorry...I am a long-time fan of Atari having had my STf since 1988, but Gem is NOT better than Windows at all!

Putting things into context. Gem is small OK, but not very comprehensive. About 8 years back Gem was superioor but not now. I have Gem 3 which I haved used on my Palmtop PC for use with Timeworks Pub 2 (PC vrs) I have TW for the ST too. They are both sluggish (the PC is an 8088/lcd/2Mb RAM pocket siz PC3100 from Sharp and the STf is floppy only).

I have Windows 3.0 on the palmtop (against all odds!) and run versions of Word for Windows and Excel 2.1 for Windows. The OS is usable on such a small machine and far quicker than GEM 3 (or 1 which I also have).

Now when you see Win 95 how can you say that it does not compare to Gem???

Allowing for the fact that a 1GB disk is as cheap as 150 UK pounds and that I paid over 550 UK pounds in 1988 for my STf/monitor new, single floppy, there is no reasoning here!

Even the MAC OS is inferior in my opinion to WIn. Have you ever wanted to 'just check something' on a MAC only to find you need some form or shareware util, whereas under DOS you just go to the command line??!! Er... can't do that on the ST either....!!

POSSIBLE ADDITIONS TO THE FAQ.....

****** PACIFIST INI..... *********
>
>>image=c:\pcst043\disk.st
>>(This is your disk image, your drive A:. Unless

Yes to the above, but you can add another line
image=c:\pcst043\another.st

and the above will become your drive B accesible from the desktop
just like drive A

****

****** PACIFIST TITLES THAT DO WORK... *******

>3.5.1 Drawing & Art

> No titles known yet.

All these work direct from the PC Hard drive,

1) Canvas..old but reliable,
2) Imagecopy 4
3) Cyberpaint 2
4) PicSwitch 0.7
5) Prism Paint

****
>3.5.4 Programming Utilities
>
> Devpac ST
> GfA Basic (but it's full of trouble unless you limit yourself to use
>on/from virtual disks)

1) Please add STOS BASIC as this works perfectly under Pacifist,
(STOS with 14 meg of memory...I nearly Fainted)
STOS works from a disk image

Following work from the PC Hard drive,
2) DEVPAK 3 also works,
3) Hisoft Basic 2 as well,

****
>3.5.6 Communications
>
> No titles known yet.

The Following have been tested and do work OFF LINE, they have not
been tested ON line, They work direct from the PC Hard drive,

1) CAB 1.5
2) STIK
3) NEWSIE
4) ANTMAIL

****

>3.5.7 Disk Magazines
>
> No titles known yet.

The following work as disk images,

1) ST+ Diskmag definatly work every issue so far,
2) ALL 29 Issues of STOSSER Diskmag will also work,
3) Maggie diskmag works...Only tested Issue 22 though

****

>3.5.8 Various (including most Utilities)

> K-Rhyme
> K-Roget
> Revenge Doc Displayer
> XControl Panel

The following work direct from PC Hard drive,

1) WHAT IS
2) Ice 2.4
3) Mega depack
4) NVDI 2.11
5) Fastcopy PRO (checks disk etc) works :)
6) UVK 6.1 checks images for viri :)
7) Neodesk3 (Works but dunno how to autorun yet)
****

>AUTO FOLDER
>
> Q: I've got an AUTO folder in the root directory of mounted partition C:,
>but still it doesn't work. Why?
> A: ?

Make an image with the AUTO Folder for drive A, for example I run a
TOS 206 with NVDI and other programs Including lots of accesories,
like ST GUIDE all set up on a 720k disk image as drive A, Once
pacifist is up and running then it is 2 or 3 keystrokes to replace the
Image for another :)

Hello,

I have already changed two times the rechargable battery in my TT030
.. but again, it's out of work ...

Buying such a product is very expansive, is there no alternative
solution e.g. put another kind of battery ?
Apparently, the battery must be of 3.6 volts.
Can you help me further ?

>thinking of subscribing, don't unless you can get the same deal.

Firstly, I'm very sorry to hear that Current Notes ain't happening like it used to happen :-(

But I do understand the reasons why. As a fellow magazine publisher in a small market, I know how hard it is to do all the work required to get a decent quality magazine out regularly when you get little or no return on it. But, if you take money for a magazine, then you either produce it or refund in full to the subscribers.

To set the matter straight with regards to Atari Computing, we offer a three issue and a six issue subscription to everyone, no matter where they are in the world. Although we are UK-based, we like to think of ourselves as having an international appeal. The fact that we have about one third of our regular readers who are not UK-citizens seems to prove our this :-)

When the Atari Computing Group (the small team behind AC) set up the magazine, one of the first things we did was to arrange a contingency fund. Into this account goes money which can be used to refund any subscriber who cancels their subscription, it could also be used to refund all subscribers should the magazine close.

Thankfully with the fantastic response we have had to the first four issues of the magazine and the circulation figure, which is three times what we based our initial calculations on, we certainly have a secure next few years.

It was very heartening to see that most re-subscribers are taking out 6 issue subscriptions. This certainly helps us in the planning of future issues and budgeting arrangements, but more importantly gives us the confidence and encouragement to continue with the magazine.

We know in the past that many people (myself and most members of the ACG team included) got burned when previous magazines crashed owing money left right and centre. This bad dealing made us determined that it would never

ever happen to AC, hence our arrangements as above.

But, I fully understand the reluctance of many people to subscribe to AC given past bad experiences. However, anyone wanting to subscribe in Canada, New Zealand, USA, Germany, Norway and Sweden can deal direct with local AC distributors who are usually well-known members of local Atari scenes. You can trust them, and in turn they trust us, but additionally there is some level of protection all round - including for us!

Anyway, that's about it, but hopefully it will give some of you the confidence to subscribe either directly with us or through your local dealer if available.

If you want further info, please contact us at: ataricomputing@cix.co.uk

We'll be happy to email or snailmail full details and a subscription form.

Best wishes

Mike Kerslake - publisher AC

PS: We would really like to see a lot more North American readers, and with local distributors in the shape of Computer Direct (Canada) and Rich Tietjens (USA), it's easy to subscribe to the magazine!!!

Go on, give us a try :-)

>standard Atari!

IIRC, Zetnet support asked us for help and advice on making sure Atari software for Zetnet went out on suitable disks. One of their support guys has an Atari, so they are aware of this problem.

One thing I can tell you is that Zetnet are very keen on getting more Atari users onboard with them, and a decent printed manual for getting Atari software up and running with Zetnet has been written, although it hasn't been given the official go-ahead yet IIRC.

BTW, I've been a Zetnet user for about 6 months, and I only use Atari software with them. Apart from some teething problems due to a typo at Zetnet's end, I've not had any major problems with them, and they are much, much, much better than Demon!!!

Not a recommendation really, but I've found Zetnet to be cheap, reliable, willing to listen to suggestions and Atari-friendly to quite a degree.

Best wishes

Mike Kerslake

I got Texel recently. There seems to be one or two items missing,

i. The ST-Guide texts
ii. ARTWORK.PRG

The guides would be useful but not necessary. However I have a feeling that ARTWORK.PRG may be a commercial package.Does anyone have any info on it? Without it the graphing function is useless (or have I missed something?)

Thanks for any help.

Sounds tempting :)

Any idea how much (if any) Webspace you get with them ?

I like the % meg with Demon, but their service is pretty shite. It's been about
a month since I even managed to connect to a Website held on Demon. Hell, I
can't even connect to my own ! :(

Can anyone give me an Email address or phone no. for Zetnet so's I can ask thewm
about their service, please ?

Thanks,

See Yas,

Paz.

2591. FS: Atari STe 16mhz

Newsgroup: comp.sys.atari.st
Date: 1997-05-18 00:00:00 UTC
From: Satcom2 <svenhard@primenet.com>
Message-ID: <01bc63f8$d8b7e1a0$223bd4cc@Primenet.Primenet.com>
Source record: 122190

I have finally decided to try and sell my "baby".

Atari STe with 16mhz adspeed accelerator board ,4 megs of RAM, TOS 2.06, mouse, internal 720k floppy,80 meg Supra hard drive,custom made VGA/Multisynch cables,1 each for monochrome and color. Very nice system, great collectors item for "Atari obsessives".An STe on a multisynch looks *so* nice (you supply the monitor).If you have a good set of speakers then use them with this, the stereo sound is really awesome.

Atari STe 16mhz 4meg TOS 2.06 $225.00
80meg Supra Drive $125.00
The whole bundle $325.00

There are some STe specific games and demos on the hard drive, which is packed almost full,and plenty of regular ST games too.

I have some original boxed software I can throw in as well if you buy the whole bundle.

Ultima 5 , Sheer Agony, Viking Child,Discovery Extra (First Basic,Neochrome,Final Fight,Sim City,Escape from the Planet of the Robot Monsters,9 lives),Atari Gemini CD Rom (shareware etc.).

Plus if you order now I will throw in an Atari 7800 with Ms.Pac Man,Xevious,Ace of Aces,Asteroids and Pete Rose Baseball (all shrinkwrapped except the last one).

If you own a PC I'll even throw in Virtua Squad,Bug,And Sonic CD (all original Sega promo master CD's).Heck take my Time Commando too,I've seen the end I don't need it.

You pay shipping from Los Angeles.

Money order or COD only.Thanks.

-Satcom2

RE: Subscriptions to AC through Computer Direct.

Computer Direct initially only offered three month subscriptions. This is
due mostly to our past experiences with now defunct magazines and the way
we handle Subscriptions.

Computer Direct has always had a solid policy in place for subscriptions.
If a magazine stops publishing and our subscribers still have issues owed,
we immediately make arrangements with the subscribers. This is a "safer"
arrangement than subscribing directly to a publisher in another country.

We now have total faith in the AC group and are now offering both three
month subscriptions for the timid ;-) as well as six month subscriptions.

3 Month Subs with Disk, mailed. $35.97 Cdn.
6 Month Subs with Disk, mailed. $71.94 Cdn.

Canadian residents add 7% GST.

>PS: We would really like to see a lot more North American readers, and with
>local distributors in the shape of Computer Direct (Canada) and Rich
>Tietjens (USA), it's easy to subscribe to the magazine!!!
>
>Go on, give us a try :-)

Yes, North Americans, you can purchase one mag at a time as well if you are
really concerned about getting burned again. Give us a call and see how
easy it is. We are accepting booking orders on single copy sales for Issue
#5 right now. You can use your MasterCard, Visa, send a cheque, whatever!
We will not bill you until we ship. Guaranteed.

Single Issue Pricing, with disk. including mailing.

$13.99 Cdn. to all addresses in Canada.
$15.99 Cdn. to all addresses in USA.

All the best,
Chris @ Computer Direct

CZ> I�m searching a program to link a PC (master) and a Atari ST (slave)
CZ> via nullmodem-cable.

Ghostlink does use a nullmodem cable, works pretty well but very slow
and with a slow PC disable all rings and bells (like EMM386 etc...) to
get the fastest speed at 115200 baud.

If you have a PC with EPP printer port or want to build some hardware
then you must give PARCP 2.04 a try!

If you have a ftp access, try ftp.zlin.vutbr.cz/pub/atari/parcp/*
and also ftp.cnam.fr/pub/Atari/*

PARCP 2.04 is working here between an 16 Mhz Atari ST and 386DX40 PC
with EPP port and i get speeds like 35000 cps instead of a normal
transfer speed like 3200 cps you get with an 28K8 modem. So it's
approx 10 times faster!

Ghostlink does give you a new drive, PARCP not but more a master/slave
situation. PARCP does also work fine under Linux (ST->Linux!),OS/2,
DOS, Win-95 (yes, background transfer works!).

Greetings,
Koos

Area: A.4SALE.PERSONAL

I've accumulated a number of programming-related books
and programs over the years. I never got around to it,
so they are for sale. I'd like to sell it all in one
shot if possible.

GFA Books: Programmer's refernce guide, Vol.1
Programming with GFA Basic 3.0
GFA Basic Training Rebbot Camp
Concepts in Programming
The GFA Basic Book
these (5) for $20
with GFA Basic 3.5 $60

C books: Atari ST Application Programming
Compute's Application Guide, Programming
in C
C-manship Complete w/disk
these (3) for $15
books with Lattice C 5.60 $55
books with Laser C $35

Assembly: The ST Assembly Language workshop w/disk
book with Devpac 2 $17

General Info: Compute's Atari ST books-
AES
VDI
TOS
The Concise Atari ST Programmer's
Reference Guide
Sybex - Programmer's Guide to GEM
Abacus Atari ST Books -
#2 Internals
#3 Gem Programmers Reference
#4 Machine Language
#8 Peeks & Pokes
#10 Introduction to MIDI programming

AES Quick Reference
VDI Quick Reference

these (12) for $45

Programming Languages sold seperately if books sell first:
Lattice C 5.60 $40
Laser C $18
GFA BASIC 3.5e $30
Devpac 2 $10

ALL books and ALL programs: $100

> mintnet) cope? I'm using hsmodem.
#
If you're using one of the SCC-ports (I can't remember what's what...) you'll be fine. To get
DTE-speeds over 38400 you'll have to use the modem.cpx or something, as pppd doesn't recognise
higher speeds. I'm using MiNTNet/pppd at 57600 here with no problems, with the speed-settings is
~/.ppprc commented out and modem.cpx set to 134 baud (== 57600 with HS-Modem.). 115200 should also
work (modem.cpx set to 150 baud.), but that's not necessary with a 28.800 modem.
#
Jo Even Skarstein
.

Alternately, use Fast_serial to drive either Modem 2 or Serial 2
over the 19,200 baud limit of Modem 1. Modem 2 can accommodate
up to 38,400 while Serial 2 allows up to 115,200 which means any
modem using Serial 2 can be put into MNP-10 compression when the
port is driven at 57,600 or more. Find Fast_Serial (alternative
to HS-Modem) and the matching English version of the CPX, on the
download bay of my page.

6 STimul

6.0 STimul
6.1 Where do I find the software?

I: INITIAL PROCEEDINGS

1.0 WELCOME!

Atari ST emulation has been around for a while, yet all this time nobody ever got their noses down to the grindstone in order to create a means for users of emulator the likes of GEMulator, PacifiST, STonX, STonX and STimul to exchange hints and tips, in other words to conceive a basic document that contains information that ST emulation fans would no doubt value like life itself. Well, this is it. It started off as a GEMulator-only FAQ, but it almost logically evolved into a more broad-minded platform.

In case you are not familiar with the concept of FAQs, please read the next paragraph.

1.1 What the FAQ?!

FAQ simply stands for "Frequently Asked Question", but it has come to indicate a text file full of information about a certain subject. And somewhere in the infinite nooks and crannies of the vastly obscure Internet you can find FAQs for just about anything at all: Sitcoms, rock groups, bomb-building, hallucinogenic substances, Amigas, Serbo-Croatian bonsai tree aficionados, you name it!

1.2 How and where to get updated FAQ versions

The idea for this FAQ came into existence somewhere around the end of 1996, at which instant its creators both started to collect the various messages pertaining to Atari ST emulation that made their way onto the various Atari Usenet groups, most particularly onto the group they quite regularly frequent, comp.sys.atari.st.

There will also be more or less frequent updates of this document, of course, which will be posted to comp.sys.atari.st and comp.emulators.misc and put up on the Web at http://members.iglou.com/rsg0910/atstemu.faq. If you want to receive the current version of the FAQ in your email box every time a new one is released, just email to cronos@worldaccess.com with the subject line "Subscribe Atari ST Emulation FAQ".

1.3 How to help improving the FAQ

First of all, please distribute this FAQ to FTP sites, WWW sites, bulletin boards and whichever other places you deem fit. The word must get around so that this FAQ will quickly improve drastically. Right now it contains rather more questions than it does replies, which is a thing that must change.

Second, if you notice anything - anything AT ALL - that is either incorrect or incomplete, please feel free to fill in the gaps (possibly with source reference). Even typo reports are welcome. Most of all, however, we would appreciate your sending in solutions to the problems posed in this document, or submitting procedures that people would need to undertake to render compatible a program so far included in the 'no way' list. Also, we would simply like to know of programs you are using successfully that aren't yet mentioned in the lists of those that work, or ones you've tried but that don't.

You will notice that the STemu and, even more so, the STimul segments in particular are fairly skeletal. Please help us enlarge them.

Cheers!

1.4 Emulation URLs not mentioned elsewhere

Further down in this FAQ, information is given as to where to get all kinds of software specific to the respective emulators. This paragraph lists URLs and the like regarding either emulators that are not (yet) in this FAQ or general stuff that can be used for any emulator.

Do note that the mere fact that some of the below URLs might possibly give way to the illegal distribution of copyrighted software does not mean that the authors of this FAQ condone such an act.

For MagicPC: (German)
http://cip2.e-technik.uni-erlangen.de:8080/hyplan/lafreund/magicpc.html
ftp://members.aol.com/ashftp/demomapc.exe (English)

For TOS2Win:
http://www.aixit.com/tos2win/info.htm

For other emulations go to Matthias Jaap homepage:
http://www.hh.schule.de/hhs/computer/english/emulator.htm

For a Teradesk Desktop Replacement:
ftp://ftp.cnam.fr/pub/Atari/Desktops/tdsk140a.lzh

For software:
ftp.cnam.fr
ftp.archive.umich.edu (a very busy site!)
gopher.archive.umich.edu (preferred)

For the TOS ROMs:
http://www.nfinity.com/~swhalen/node99 (temporarily down)
http://www.geocities.com/SiliconValley/Pines/2425/Tos_roms.zip
http://www.geocities.com/SiliconValley/Pines/7550

Comp.emulators.misc FAQ (maintained by Adam Roach):
http://www.why.net/home/adam/cem/toc.html

1.5 Author information

1.5a Richard Karsmakers

A teacher of English since January 1997, some of you may recognise Richard from some things he's done on the Atari platform, which include the "Ultimate Virus Killer" and the disk magazine "ST News". Although he has in the mean time rounded off the latter, he has vouched to continue developing the former. This, together with his disinclination to convert hundreds of "Superbase" and "1st Word Plus" files to "Access" and "Word" respectively, is the main reason why he is now the owner of a PC set-up with Atari emulation.
He still writes for "Atari Computing" and the Maggie" disk magazine occasionally, and plans to set up a World Wide Web Multi Media Magazine called "WWW-MMM". Having a penchant for loud music, he also maintains the FAQ for the rock group Gwar.

1.5b Robert Goodwin

A deaf computer user since about 1978, Robert has used a number of the older platforms when they were released, and has nothing but respect for them. Though he has built his own 486 system, he still uses his STE and Mega STE, as well as a Sun 3/60 workstation. He's currently attempting to learn more C to write some sort of BBS program or somesuch. Give it time! He's not about to give up his ST systems, though he'll test things out on a variety of ST emulators just to see if they'll run, and then abuse them from there.

1.6 Atari ST Emulation FAQ history

1.0 - 1 Mar 1997
- Initial compilation rounded off, GEMulator-only

1.5 - 11 May 1997
- Second, improved version
- STonX, PacifiST, STemu, and STimul added
- Reformatted to 75 columns for more universal readability
- Chapter division restructured, hopefully made more logical :-)

1.7 Thanks

Lots of thanks to the people on Usenet who have reacted positively to the idea of creating this FAQ - this one's for you! Quite a few people have reacted by submitting questions, sometimes even questions accompanied by an answer. Although we'll no doubt have forgotten a few people here, heartfelt 'cheers!' need to go out to Ben-John, Damien Burke, Will Fisher, Tony Greenwood, Anthony Jacques, William Jones, Ken MacDonald, Miguel Reizinho, Harry Sideras, Mark Slagell, Philip Taylor, Jeff Vincent and Manfred Vogelgesang.

II: GEMULATOR CLASSIC AND GEMULATOR96

2.0 GEMulator

GEMulator96 is a software Atari ST emulator for PCs, created by Darek Mihocka of Emulators, Inc. It emulates most of the ST systems released by Atari, the 520/1040ST, STfm, STf, STm, MegaST and MegaSTE.
Darek Mihocka, in case the name rings a bell, used to be the main man of Branch Always Software and has made, among many utilities, the Atari screen speeder "Quick ST".

GEMulator Classic (current version 3.6) can only emulate the Atari ST. This product is freeware (yes, it's for free!) and works on MS-DOS, Windows 3.1, Windows 95 and OS/2 Warp, requiring at least an 80386 processor running at 33 Mhz, with 2-4 Mb of internal RAM.

GEMulator96 (currently version 4.6 of January 1997) costs US$ 69.95 separate, US$ 99.95 with MagiC 2, US$ 119.95 with MagiC 4, US$ 149.95 with TOS 1.04 ROMs on an ISA card, and US$ 179.95 with TOS 2.06 ROMs on an ISA card. Users of MagicPC (a competing product) can upgrade to GEMulator96 for US$ 39.95. It runs on Windows 3.1, Windows 95 and Windows NT, and requires at least an 80486 processor at 33 Mhz, with 6-8 Mb of internal RAM and a VGA monitor. It works on systems equipped with 386/486/Pentium or Pentium Pro.

Emulators, Inc. also offer to send you the latest GEMulator with MagiC 4 if you send them your old ST or (Mega) STE with disk drive and at least one (monochrome or colour) monitor. They'll even pay the shipping of GEMulator to you, the kind souls :-\

GEMulator97 is in the pipeline for the summer of 1997; this one should also support Atari TT emulation.

2.1 Where do I find the software?

Emulators Inc. can be reached via email at emulators@msn.com, which is also the address where additional questions about GEMulator may be asked. The regular (snailmail) address is:

Emulators, Inc.
14150 NE 20th Street, Suite 302
Bellevue, WA 98007
U.S.A.

Phone 206-236-0540
Fax 206-236-0257

For GEMulator Classic and GEMulator96:
http://www.emulators.com (click on Downloads)

For the virtual drives:
http://home1.swipnet.se/~w-11410/js/gem96dem.zip
(Just take the drives out of the zip file and stick them in your
GEMulator directory)

2.2.0 How do I install it?

Darek Mihocka, of Emulators, Inc., has said before that a manual is in
the making for the GEMulator Classic, but one has not surfaced yet. There
is one on setting up the GEMulator96 (to be found on the Emulators, Inc.
home page).

2.2.1 Installing the GEMulator Classic

Create a directory anywhere on your hard drive. GEM is a good one, though
you may want a different one. Place GEMUL8R.EXE, and MAGIC_PC.OS in your
directory, as well as the .VHD and STHDBOOT.SEC files.

Create the GEMUL8R.INI file. You can use the one below. See 2.2.3 for a
breakdown of what each line does.

```
rams 8
mono
quick
com1
disk c: cdrive.vhd
disk d: ddrive.vhd
disk e: edrive.vhd
disk f: fdrive.vhd
magic_pc.os
```

You may have seen somewhere that the .INI file has to go in the root.
This is an error. The emulator is looking for it in the same directory
it's in. If you want it in the root directory, then make it 'magic
c:\magic_pc.os,' and it'll find it there. The nice thing about this sort
of set-up is that you can have multiple operating systems and desktops.
Run the GEMUL8R.EXE program. You should now be able to see the boot-up
screen with the Atari logo, at which moment it'll start a memory check.
This check can be bypassed by tapping any key on the keyboard. If all goes
well, you will be at the desktop with 4 virtual drives C-F, and two
floppy drives A and B.
You may also see that you cannot install the ROMs via the program, using
the INSTALL command. This is for the plug-in card that Emulators Inc.
sells. See their home page for more information. GEMulator will run
without the ROM images if you have this card.

2.2.2 Installing GEMulator96

The Emulators Inc. Web page has instructions on doing this. However, there may be some minor errors or whatnot, so watch this space.

2.2.3 Creating the GEMUL8R.INI file

This paragraph features a breakdown of what the individual lines in the GEMUL8R.INI file do.

rams 8
How much memory do you wish for your ST to have? Make sure you have enough RAM as well. A 4 Mb PC should use rams 4.

mono
What kind of monitor? For now, the GEMulator Classic only uses either low or high resolution.

quick
How fast do you want the emulation to be? Quick or Slow? ST speed or PC speed?

com1
What port is your modem on?

disk c: cdrive.vhd
disk d: ddrive.vhd
disk e: edrive.vhd
disk f: fdrive.vhd
The virtual hard drives. If you don't have them, the emulator will give you an error saying it can't find them, and all you'll have is access to the A: and B: drives. See above where to find them.

magic_pc.os
This is your TOS ROM image. For now, most people are using 2.06. If your image is called TOS.IMG, rename this line to magic tos.img. It will run. Without this line or the .INI file, it will default to searching for the MAGIC_PC.OS file. Do note that no version of TOS 1.00 will work with GEMulator.

g
Will allow you to go straight into the ST screen. This appears not to be needed when you use Windows 95. With some systems, you see, you'll just get a white screen and nothing will happen is you omit this 'g'.

2.4.0 No Way - What won't run on the GEMulator?

This segment features a list - as complete as we could make it - of various programs that do *not* work on the GEMulator. Individual games (just like Falcons-specific applications such as "Rainbow") are not mentioned, as they generally do not work. Exceptions may be found below, in 2.5.x.

2.4.1 Drawing & Art

Deluxe Paint (the mouse can't be moved).
NeoChrome

Spectrum 512

2.4.2 DTP, Word Processing and Text Editor

No titles known yet.

2.4.3 MIDI and Sound

No titles known yet.

2.4.4 Programming Utilities

No titles known yet.

2.4.5 Spreadsheets & Databases

No titles known yet.

2.4.6 Communications

No titles known yet.

2.4.7 Disk Magazines

Maggie (probably caused by the music).

2.4.8 Various (including most Utilities)

Diamond Edge
FastCopy pro (appears to work fine if a bit slow, but the target disk has 0 bytes free and no folders)
Freedom (see chapter 5)
Kobold File Copier
LEDPanel (doesn't display anything)
Microtalk QWK Reader
ST Zip (it cant deflate anything; this is not much of a problem, though, as "Winzip.exe" can be assigned to be used, even from GEMulator, and this is much faster anyway)
Xboot (though it can be used to manually rename CPX, AUTO\.PRG and ACC files, it cannot handle its function key sets)

2.5.0 YES Way - This will run on the GEMulator!

This segment features a list - as complete as we could make it - of various programs that *do* work on the GEMulator. Where needed, hints are given on how to make programs work that may initially seem reluctant to function properly or efficiently.

2.5.1 Drawing & Art

Canvas
Degas Elite
ImageCopy

2.5.2 DTP, Word Processing and Text Editor

1st Word Plus 3.20TT
Calamus SL
Everest
Pagestream
Protext
Tempus (although it does give a "THIS APPLICATION CAN'T FIND THE FOLDER YOU TRIED TO ACCESS" error whenever it's exited - anyone know why, and how this can be solved?)

2.5.3 MIDI and Sound

No titles known yet.

2.5.4 Programming Utilities

DevPac ST (*the* standard assembler from HiSoft)
GfA Basic 3
GfA Basic 3 compiler (see 'problems', chapter 5, too)
Hisoft Basic 2
Hisoft Personal Pascal
Interface (resource file designer)

2.5.5 Spreadsheets & Databases

Data Manager ST
DB Master One
Superbase Professional

2.5.6 Communications

Flash

2.5.7 Disk Magazines

ST News Volume 7 Issue 2 and up (provided the music is configured 'off' in the "SETUP" file)

2.5.8 Various (including most Utilities)

Atomic 3.5 (packer)
GEMBench (by Ofir Gal)
Geneva
Hiscore Terminal Utility 1.0
Kivi QWK Reader
Knife ST (though it can't access hard disk sectors outside file mode)
Let 'Em Fly (dialog box enhancer)
MagiC
Mega Depack
Mosdos
Mutil (Michtron Disk Utility) (though it can't access hard disk sectors outside file mode)
NeoDesk 4
New Depack (Sinister Developments - use the ST version)
NVDI
Pack Ice 2.4 (packer)

P.A. Pack (packer)
Picswitch 7
Revenge Doc Displayer (but see chapter 5!)
Selectric (alternative file selector)
Sysinfo (by H.W.A.M. de Beer)
Ultimate Virus Killer
Whatis
Wowbagger the Infinitely Prolonged (Grandson of) 4.242 (swearing
accessory)

2.5.9 Games

Don't Worry be Happy
Geneticopoly (AI Monopoly by Roy Stead)
Premium Mah Jong (use standard resolutions, though)

2.6.0 GEMulator problems...and how to solve them

This is one of the most important segments of the FAQ for GEMulator users
- the part where practical problems are exposed and consequently -
hopefully - tackled. It's divided in what is hopefully a practical
structure.

2.6.1 Software compatibility

FREEDOM

Q: "Freedom" appears not to work properly. When you try to save a file
with it and the original file already exists, it will merely update the
date and time stamp of the original file, but not change its actual
contents.
A: Save under a different filename, then exit, delete the old file, and
rename the new. Strange, but that's the best workaround for now.

GENEVA

Q: When installing "Geneva" via its own installation program, one of its
vitally important files, GEM.CNF, is always 0 bytes in size. "Geneva"
always needs the specifications in this file when, for example, you want
to have "NeoDesk" used as default 'shell'.
A: Create a text file such as the one displayed below (edit it to your
own specifications):

```
# GEM.CNF: written by INSTALL.PRG
#
setenv ACCPATH=C:\
setenv PATH=.,C:\GENEVA
setenv ACCEXT=ACC,ACX
setenv GEMEXT=PRG,APP,GTP,EXE
setenv TOSEXT=TOS,TTP
setenv SHOWHELP=C:\GENEVA\HELP\GNVAHELP
# setenv TOSRUN=C:\GENEVA\GNVA_TOS.PRG
# Other commands:
```

```
# run <program> <parameters...> Runs a program with parameters
# runsleep <program> <parameters...> Runs program, puts it to sleep
shell C:\NEODESK4\NEODESK.EXE Runs program as the shell
#
# end of GEM.CNF
```

GFA BASIC (COMPILER)

Q: When you use "MENU.PRG" to compile a program, you specify "FILE.GFA" but, for some or other reason, the actual compiling module attempts to access the file "FILE.GFA.GFA"; it autonomously puts an additional (and superfluous) extension behind the file, causing it not to be found.
A: This can be solved by having two identical copies of "FILE.GFA", with the second called "FILE" (right, with no extension). Now manually drag "FILE" onto "GFA_BCOM.PRG". The file "FILE.GFA" will be accessed and compiled, resulting in a "FILE.O" file. Now start "MENU.PRG" and act as usual (F2, F10 is what I usually so, then select "FILE.GFA"). The compiling process will give an error (file not found), but that's no problem and the linking process will access "FILE.O". One "but": You cannot specify the compiler options from "MENU.PRG" anymore, so include them in your source file.

REVENGE DOC DISPLAYER

Q: "Revenge Doc Displayer" refuses to be installed properly as "default" application for applications not yet assigned to other files.
A: There seems to be no other solution than to edit the NEWDESK.INF file and add lines similar to the following (include your own RDD3.PRG path):

```
#G 03 04 200 C:\ATARI\UTILITY\RDD\RDD3.PRG@ *.TXT@ @
#G 03 04 200 C:\ATARI\UTILITY\RDD\RDD3.PRG@ *.ASC@ @
#G 03 04 200 C:\ATARI\UTILITY\RDD\RDD3.PRG@ *.ME@ @
#G 03 04 200 C:\ATARI\UTILITY\RDD\RDD3.PRG@ *.1ST@ @
```

STOS

Q: Why don't some compiled STOS programs work? This could have something to do with the TOS version (I'm using 2.06), because a similar problem appeared in real life on the ST a few years ago, but even with the later versions of STOS the mouse/keyboard don't respond...
A: It should be noted that, with the latest version of the STOS compiler, everything should work fine, and the mouse will work too.

XBOOT

Q: "Xboot" cannot read and save its default 'sets', it cannot find its own C:\XBOOT\" path.
A: The solution may be to start using Virtual disk files. Is there a solution for regular (non-Virtual) disk mode?

2.6.2 Programming under GEMulator

END OF FILE RECOGNITION

Q: In "GfA Basic", the EOF(#x) command doesn't find the end of a file.
A: There is no true solution for this one. If the program that needs to read (for example) a configuration file using EOF(#x) still has its source code available, you could change the WHILE NOT EOF(#x)...WEND loop to a DO...LOOP where you exit the loop if an empty line is read (with LINE INPUT). So you have to make sure you add an empty line or two at the end of, in this case, the configuration file.

JOYSTICK EMULATION

Q: Can joysticks be emulated?
A: ?

WRITE-PROTECTED DISKS

Q: There is a perfect way to check the write-protect status of a floppy disk on *any* Atari system (Falcon, TT, ST, whatever), achieved by the following piece of code ("GfA Basic"):

```
FUNCTION wrpr(crd%) !crd% contains 0 - drive A or 1 - drive B
SDPOKE &H43E,-1 !Floppy operations off
~XBIOS(29,NOT (2*(crd%+1))) !Select drive
SDPOKE &HFF8606,&H80 !FDC-status register select
buf%=DPEEK(&HFF8604) !FDC-status register read
~XBIOS(30,2*(crd%+1)) !Deselect drive
SDPOKE &H43E,0
buf%=(buf% AND 64)/64 !Isolate WP-bit
RETURN buf%
ENDFUNC
```

Predictably, due to the direct access on addresses FFFF8604 and FFFF8606, this doesn't work on the GEMulator. How can this be solved?
A: ?

2.6.3 Miscellaneous

Any GEMulator-related problems that didn't fit in either of the two previous categories will be addressed in this paragraph.

AUTO FOLDER ON DRIVE A:

Q: How do you boot programs from an AUTO folder on drive A?
A: Set the 'Boot disk' option to drive A (RTFM!).

INSTALLING GEMULATOR96 WITHOUT TOS ROM CARD

Q: One beautiful day, my GEMulator96 TOS ROM card was suddenly no longer recognised by the software. It said 'GEMulator not running'. Don't know what caused it; I certainly did no fumbling around and added/removed no hardware or anything. I took the ISA card out and inserted it again, but no show. Took the ROM chips out and inserted them again. The TOS ROMs are simply no longer recognised, the 'find TOS' option finds absolutely zilch.
A: I wouldn't know how to solve this. Maybe you should sell the ROM TOS chips and simply throw away the TOS card, use the GEMulator with TOS on disk.

Q: OK, all you guys talk about using GEMulator with TOS on disk. Apparently you should have a file called 'magic_pc.os' in the root directory of partition C. This does not work. Also, you guys mention altering the INI file, but that isn't even a simple ASCII file with me!
A: Ah! That's the GEMulator *demo* that you found everybody talking about. The real thing, the registered version of GEMulator96 you appear to own, has no ASCII INI file and looks for the file 'magicpc.os' in the root of C:. Yes, simply leave off the '_' between 'magic' and 'pc' and off you go.
Q: Why the hell did I bother to buy the expensive TOS ROM card in the first place?
A: Objectivity and a disinclination to piss off Darek prevents me from replying to that.

I/O PROBLEMS ON GEMULATOR CLASSIC

Q: I have several problems with I/O on GEMulator Classic:
- Serial port: there is no DTR signal. Cannot talk the to modem unless I have first sent "at&d0" (ignore DTR, for USR Sportster 14.4 external) from outside GEMulator before entering Atari mode. But even then it goes unresponsive after connect.
- Parallel port: errant characters are sent to the printer for no reason I can think of. Every now and then the laser printer spits out a page with a single capital "E" in the upper left corner.
- Floppy: media change is seldom recognised. I have to reboot when changing floppies.
A: Regarding the media change, you can tap ESC when changing floppies and it should recognise the media change.

MS-DOS VS. ATARI-FORMAT DISKS

Q: I cannot read all Atari disks on the PC.
A: MS-DOS and Windows are very picky when it comes to being able to read disks. Even though Atari systems use a disk format that is largely compatible with PCs, MS-DOS and Windows require very specific values to be present in a disk's bootsector. Together with GEMulator you should get a program by the name of MOSDOS.PRG. This Atari program will transform Atari-formatted disks into ones that MS-DOS and Windows can read. Do note that this does not work with non-standard Atari format (such as 10 sectors per track 'FAT' disks, hyper-formatted disks, etc.).

PRINTING

Q: When I print, the printer stops before the printer buffer is fully flushed. I have to start another print job to finish my first job. I'm using GEMulator 4.15 on a P133 running Win95. I've tried default, Fast BIOS Printing, and FPPRINT (or whatever it's called) with the same results. I'm trying to print to a Canon BJ-200. I had no such problems using GEMulator 3.x on my old 486 DX2/66.
A: Is it possible that you may need to send the EOF character, that is, a CTRL-Z, for it to actually start printing?

SOUND

Q: On GEMulator Classic, with sound emulation on, the first key press
starts a continuous high-pitched tone, not too loud, from both channels
(Soundblaster clone, Forte 16). On GEMulator96, there is a constantly
repeated sound, as if the volume is turned on and off a few times per
second. XBIOS 32 sound is garbled (Soundblaster clone OptiMAD).
A: ?

III: PACIFIST

3.0 PacifiST

PacifiST is a software Atari ST emulator for PCs, created by Fr&#65533;deric Gidouin. It works best under DOS, but also runs smoothly from Windows 3.11 or Windows 95. Minimum configuration is a 100 Mhz 486, and a Soundblaster-compatible soundcard if you want to hear something. PacifiST emulates the basic ST system released by Atari. PacifiST, amazingly, is FREEWARE, meaning it's for free, although Fr&#65533;deric would like to occasional (and much deserved!) donation as most of his time goes into the programming and developing of this package. The biggest advantages of PacifiST are that it can run quite a few ST demos and games. Also, it can use both big image files *and* regular PC mass storage media simultaneously, where GEMulator can only have one or the other.

The current version is 0.43 (April 24 1997), with the next update
scheduled for the end of May.

3.1 Where do I find the software?

The programmer, Fr&#65533;deric Gidouin, can be reached at email address frederic.gidouin@hol.fr, or via the snailmail address below.

Frederic Gidouin
9, Allee du Chevrefeuille

A variety of PacifiST utilities can be found around the Web, too.

AssiST:
http://www.iol.ie/~ajankows/st/pacifist.html

PaCiLOAD:
http://www.labyrinth.net.au/~contact/paciload.zip

MSAtoST:
http://www.jetman.demon.co.uk/st/index.html

IMGBUILD:
http://www.geocities.com/SiliconValley/Lakes/6878/download.html or
http://wwwperso.hol.fr/~gidouin/download.html

3.2.0 Installing PacifiST

Place everything in its own directory, and modify the entries as
described below in the PACIFIST.INI file, then run the PACIFIST.EXE file.

3.2.1 The PACIFIST.INI file

This file sometimes changes as Frederic puts more changes in Pacifist and
makes it run better. This will attempt to keep up in some way with the
latest revisions as possible. Read the PACIFIST.DOC for more info.

```

(Do you want to go directly from the display monitor to the program?)

ramsize=2
(How much memory do you wish to have? The DOC file contains info on how to
do this. An 8 meg machine can easily handle a RAM size of 6, while those
```

machines at 16 megs can do 12-14 megs.)

Sound=yes
(Sound or no sound, that is the question.)

volume=255
(How loud do you want it? 0-255 is the limit, though your soundcard setups
can be changed. If it's coming out of a stereo or speakers, use that)

samples=yes
(Play ST sound samples?)

image=c:\pcst043\disk.st
(This is your disk image, your drive A:. Unless pcdrive=yes above, which
it shouldn't be due to some bugs, it'll actually read the floppy.)

mount=c:\pcst043\stfiles
(Your own hard drive image, actually a directory. Change it to where your
directory is located. You can place files in there if you wish merely by
copying them there. This is *not* a virtual disk, like 'image' above)

tos = d:\motorola\tos\tos100.rom ;Of course, you must edit this
line
tosbase= 0xfc0000 ;to indicate YOUR Tos file location.
;tos = d:\motorola\tos\tos162.rom
;tosbase= 0xe00000
tos = d:\motorola\tos\tos206.rom
tosbase= 0xe00000
(These above don't need much explanation. They're the TOS ROMs. Keep the
tosbase address the same, do not change at all. You can change the path
name to the ROM images.)

[debug]

logfile=c:\pcst043\st.log
trapirq = none
logirq = none

3.4.0 No Way - What won't run on PacifiST?

This segment features a list - as complete as we could make it - of
various programs that do *not* work on PacifiST. Individual games (just
like Falcons- specific applications such as "Rainbow") are not mentioned,
as they generally do not work. Exceptions may be found below, in 3.5.x.
Some titles may be in here although they work when you try them; this is
then probably caused by people not have tried both screen modes (so please
contact us soon and tell us in which screen mode it works for you).

3.4.1 Drawing & Art

No titles known yet.

3.4.2 DTP, Word Processing and Text Editor

No titles known yet.

3.4.3 MIDI and Sound

No titles known yet.

3.4.4 Programming Utilities

No titles known yet.

3.4.5 Spreadsheets & Databases

No titles known yet.

3.4.6 Communications

No titles known yet.

3.4.7 Disk Magazines

No titles known yet.

3.4.8 Various (including most Utilities)

No titles known yet.

3.5.0 YES Way - This will run on PacifiST!

This segment features a list - as complete as we could make it - of various programs that *do* work on PacifiST. Where needed, hints are given on how to make programs work that may initially seem reluctant to function properly or efficiently. Where necessary, information will be given about which screen mode to use.

3.5.1 Drawing & Art

No titles known yet.

3.5.2 DTP, Word Processing and Text Editor

1st Word Plus (provided it is run from a virtual disk, and any docs are on a virtual disk too!)
Everest
Protext
Tempus (the file selector even works better than the TOS one - see 3.6.0)

3.5.3 MIDI and Sound

No titles known yet.

3.5.4 Programming Utilities

Devpac ST
GfA Basic (but it's full of trouble unless you limit yourself to use on/from virtual disks)

3.5.5 Spreadsheets & Databases

Superbase Professional

3.5.6 Communications

No titles known yet.

3.5.7 Disk Magazines

No titles known yet.

3.5.8 Various (including most Utilities)

K-Rhyme
K-Roget
Revenge Doc Displayer
XControl Panel

3.5.9 Games

Don't Worry be Happy

3.6.0 PacifiST Problems...and how to solve them

This is one of the most important segments of the FAQ for PacifiST users - the part where practical problems are exposed and consequently - hopefully - tackled. It's divided in what is hopefully a practical structure.

AUTO FOLDER

Q: I've got an AUTO folder in the root directory of mounted partition C:, but still it doesn't work. Why?
A: ?

ITEM SELECTOR

Q: The item selector of TOS 2.06 cannot select another drive by means of the shortcut buttons. How come?
A: ?

3.6.1 Software Compatibility

GFA BASIC

Q: I get really weird errors in "GfA Basic" source code when in the interpreter, and similarly when I run compiled programs.
A: File I/O goes wrong with GfA Basic unless you run from virtual disks.

3.6.2 Programming under PacifiST

No entries yet.

3.6.3 Miscellaneous

Any PacifiST-related problems that didn't fit in either of the two previous categories will be addressed in this paragraph.

DATE & TIME STAMP

Q: When you copy files from virtual disks to an actual PC partition, the date and time stamp is all wrong. How come?
A: This is a bug in PacifiST. Fr&#65533;deric is aware of it since 0.43.

VBE 2.0

Q: To be able to let some games and demos run, you need something called VBE 2.0. Where can it find it?
A: VBE 2.0 is a standard of programming video cards and is much faster than the older VBE 1.1. Some video cards have VBE 1.1 on board, but if they don't then you can install a VBE 2.0 emulator, which is the thing meant here. There are specific versions for specific video cards, but there's also a popular one called "UniVBE" (a.k.a. "Display Doctor") by SciTech (http://www.scitechsoft.com/). This works on most (?) video cards. It comes free with some commercial games and is shareware. The file to look for is sdd53.exe.

III: STONX

4.0 STonX

STonX is an Atari emulator for UNIX written by Marinos Yannikos, currently at version 0.6.5. It's been ported to a DOS environment by Dirk Jansen.
An official port for Windows 95 is underway, supporting such features as DirectX and DirectSound. Expect a new, vastly improved version soon.
There is a rumour floating around that someone is writing an Atari ST Emulator in Java, based on STonX. We'll keep you posted.

4.1 Where do I find the software?

Its author, Marinos Yannikos, can be reached at the following email address: nino@complang.tuwien.ac.at.

Official STonX website:
http://www.complang.tuwien.ac.at/nino/home.html

4.2 Installing STonX

Place everything in its own directory, for example \STONX\. It will go looking for a TOS image file called TOS.IMG. Run the STONX.EXE file, and go from there. Adding a /? will have it come up with a listing of commands. Below is this listing of commands;

usage: STONX.EXE [<options>]
<options> =
-q Be Quiet
-size <W>x<H> (NYI)
-disk <X>:<File> Load diskfile <File> as Drive <X>:
-fs <X>:<Directory> Map <Directory> to Drive <X>:
-colo[u]r|-mono Set `monitor type'
-usec <X> Set <X> microsecond interval timer
-vbl <X> Set <X> * usec VBL interval
-timer-c <X> Set <X> * usec Timer C interval
-refresh <X> Set <X> * VBL refresh interval
-para <file> Use <file> as the parallel port device

-serial <file> Use <file> as the serial port device
-kmap <file> Load the Keyboard mappings from <file>
-noaudio Disable Audio driver
-noshm Disable XShm extension
-chunky Use `chunky' update mode
-warmboot Attempt to simulate a warm-boot
-private Use private colormap (speeds -color up)
-cconws Redirect GEMDOS Cconws() function to terminal
-vdi Use xlib-VDI

Example:

G:\STONX\STONX.EXE -disk a:Disk -color -usec 10000 -vbl 10 -refresh 2
-timer-c 1

...will use `Disk' for drive A:, boot in colour mode, and run Timer C at
100Hz, VBLs at 10Hz, and refresh with 5Hz, if your system allows interval
timers with 10 ms timer intervals (see setitimer(2)).

For the Linux/Unix version, follow the instructions in the documentation
file that came with it.

4.4.0 No Way - What won't run on STonX?

This segment features a list - as complete as we could make it - of
various programs that do *not* work on STonX. Individual games (just like
Falcons- specific applications such as "Rainbow") are not mentioned, as
they generally do not work. Exceptions may be found below, in 4.5.x.

4.4.1 Drawing & Art

No titles known yet.

4.4.2 DTP, Word Processing and Text Editor

No titles known yet.

4.4.3 MIDI and Sound

No titles known yet.

4.4.4 Programming Utilities

No titles known yet.

4.4.5 Spreadsheets & Databases

No titles known yet.

4.4.6 Communications

No titles known yet.

4.4.7 Disk Magazines

No titles known yet.

4.4.8 Various (including most Utilities)

No titles known yet.

4.5.0 YES Way - This will run on STonX!

This segment features a list - as complete as we could make it - of various programs that *do* work on STonX. Where needed, hints are given on how to make programs work that may initially seem reluctant to function properly or efficiently.

4.5.1 Drawing & Art

No titles known yet.

4.5.2 DTP, Word Processing and Text Editor

No titles known yet.

4.5.3 MIDI and Sound

No titles known yet.

4.5.4 Programming Utilities

4.5.7 Disk Magazines

No titles known yet.

4.5.8 Various (including most Utilities)

No titles known yet.

4.5.9 Games

No titles known yet.

4.6.0 STonX Problems...and how to solve them

This is one of the most important segments of the FAQ for STonX users - the part where practical problems are exposed and consequently - hopefully - tackled. It's divided in what is hopefully a practical structure.

4.6.1 Software Compatibility

No entries yet.

4.6.2 Programming under STonX

No entries yet.

4.6.3 Miscellaneous

Any STonX-related problems that didn't fit in either of the two previous categories will be addressed in this paragraph.

IV: STEMU

5.0 STemu

STemu is a somewhat limited ST emulator written by Jochen Frank, uk9a@rz.uni-karlsruhe.de, that emulates a bare-bones ST. It emulates an Atari STE on an MS-DOS/PC machine with an 80486 processor or better. It emulates the 68000 CPU, the standard Atari graphics resolutions, the floppy disk drive, the mouse, the keyboard and the printer port. Games don't work, as the MFP timer chip has not yet been fully implemented.

5.1 Where do I find the software?

http://shaw.iol.ie/~ajankows/st/stemu02.zip

5.2 Installing STemu

STemu requires that you create a directory containing all the files that come in the archive, that is, stemu.exe, dos4gw.exe, and tos.img. The only TOS that seems to run well under STemu is 1.62.

The emulator requires quite a bit of memory, so refer to the readme file included in the archive to see how to give it some virtual memory.

To run the emulator, you will either want the monochrome or the colour version.
Use either;

stemu M for the monochrome version
stemu C for the colour version

Note that it requires the M or C to be in uppercase letters, and will not work with lowercase letters.

5.4.0 No Way - What won't run on STemu

This segment features a list - as complete as we could make it - of various programs that do *not* work on STemu. Individual games (just like Falcons- specific applications such as "Rainbow") are not mentioned, as they generally do not work. Exceptions may be found below, in 5.5.x.

5.4.1 Drawing & Art

No titles known yet.

5.4.2 DTP, Word Processing and Text Editor

No titles known yet.

5.4.3 MIDI and Sound

No titles known yet.

5.4.4 Programming Utilities

No titles known yet.

5.4.5 Spreadsheets & Databases

No titles known yet.

5.4.6 Communications

No titles known yet.

5.4.7 Disk Magazines

No titles known yet.

5.4.8 Various (including most Utilities)

No titles known yet.

5.5.0 YES Way - This will run on STemu

This segment features a list - as complete as we could make it - of various programs that *do* work on STemu. Where needed, hints are given on how to make programs work that may initially seem reluctant to function properly or efficiently.

5.5.1 Drawing & Art

No titles known yet.

5.5.2 DTP, Word Processing and Text Editor

No titles known yet.

5.5.3 MIDI and Sound

No titles known yet.

5.5.4 Programming Utilities

No titles known yet.

5.5.5 Spreadsheets & Databases

No titles known yet.

5.5.6 Communications

No titles known yet.

5.5.7 Disk Magazines

No titles known yet.

5.5.8 Various (including most Utilities)

No titles known yet.

5.5.9 Games

As mentioned in the above description, it will not run any games at the moment, due to the Timer C of the MFP not yet being implemented.

5.6.0 STemu Problems...and how to solve them

This is one of the most important segments of the FAQ for STemu users - the part where practical problems are exposed and consequently - hopefully - tackled. It's divided in what is hopefully a practical structure.

5.6.1 Software Compatibility

No entries yet.

5.6.2 Programming under STemu

No entries yet.

5.6.3 Miscellaneous

Any STonX-related problems that didn't fit in either of the two previous categories will be addressed in this paragraph.

V: STIMUL

6.0 STimul

STimul is another ST emulator currently in development, though there's no release date as of yet. It is being written by Sebastien Brochet.

6.1 Where do I find the software?

Sebastien's email address is tenabiss@micronet.fr. A FAQ of his emulation package (no actual software yet) can be found at the following URL:

http://www.micronet.fr/~tenabiss/anglais/coemu_an.html

Can't say the same for Atari Computing. We were at the last German show in December, plus we had a full presence at the three recent UK shows, and we're already booked for the two UK October shows. Plus we have reports in AC#5 on the most recent shows.

Best wishes

```
d > I have already changed two times the rechargable battery in my
d > TT030 .. but again, it's out of work ...

It's rechargable?

I've replaced my battery twice as well, using the original lithium
types. Just don't buy them from Toad or Best (any good computer
parts store should carry them for a reasonable price).

BTW, there is one way to extend the battery life: never turn your
computer off.

2606. PPP for STiK soon?!?

Newsgroup: comp.sys.atari.st
Date: 1997-05-19 00:00:00 UTC
From: "Jon Hull (CS)" <hull@eng.usf.edu>
Message-ID: <Pine.GSO.3.96.970519000104.29383A-100000@suntan>
Source record: 122199

Hey, everybody! Here's some semi-exciting news:

Yesterday I received a response from Dan Ackerman of STiK fame after e-mailing him about a week and a half ago. My question to him: when will we see PPP for STiK. His reply: he was using PPP for STiK when he wrote the response to me. He gave no mention as to how far along the development was, but stated that they were just working out a few bugs. As a programmer myself, I realize that could mean another year of development, or it could mean days... But, to all of you out there, like myself, that are awaiting PPP for STiK, this should lighten your spirits... TTFN...

Just email "what's up":).

Thank you,
Mike

2608. Free for Atari usergroups

Newsgroup: comp.sys.atari.st
Date: 1997-05-19 00:00:00 UTC
From: mgrove@owens.ridgecrest.ca.us
Message-ID: <5lovmgben2@ash.ridgecrest.ca.us>
Source record: 122201

Ok usergroups. I have advertised some older software
for sale, but have not had a very good response. I was
able to sell a few packages. The reason for the sale was
to cover shipping cost to keep some of these old titles
and books in circulation. Now it is your turn. I will
donate many of the items on the list to your usergroup
that is currently active with at least three or more members.
Please send a little info about your group along with your
replys. The only cost to you will be shipping, which can
be paid in advance by check, or COD fees if sent by that
method. I need the space, and do not want to take it to
the thrift shop. In the event of multi responses, I will
look at your groups "brief" discription and seperate up
the items fairly, and let you know what I will be shipping.
I hope that a group or groups can make use of these items.
The prices with the items was the asking price. They will
be free to user groups, sans the shipping cost.

A complete listing of items that are for sale can be found at
ftp.ridgecrest.ca.us/pub/users/m/mgrove (4-sale.txt)

Thanks, Mike

Hi Everyone.
I just installed my Atari 4Mb TT-RAM board(4 soldered 1 Mb SIPPs).
Anyways, my TT displays "TT-RAM XXX... 4096K" then 4 bombs.
There are three jumpers on the TT-RAM board plus another three
jumpers between the TOS 3.06 chips.

I presently have 4Mb ST-RAM also.
Which jumpers do I need to change?
Thanks.

The Supercharger was in a box by its self, but had a disk ov utilities t
to provide the opposite, ie using the Atari as a ram disk to the
Supercharger PC.

I have the original disks for this but have not used them in a long
while and they may not now work. If you are intrested please drop me a

line and I will see what I can find that is still working.

Best regards
Don

Well done ! Feels nice to read this, after that nasty message by Nick
Bales.

> Thanks to Charles Silver for posting that last message of his, as
> well as the fellow whose name I've forgotten who made the point about
> ROUTE.TAB and having the IP_ADDRESS defined. STiNG is no longer bombing

What precisely was the problem in your case. I feel someone should start
to put together a FAQ on these problems, since, as usually, people are
more fanciful in exploring what can be done wrong than I can imagine.
:-))

> Now, bring on PPP! :)

Under way ...

===...Dear STOSSER... The reason is a livelihood. We can not pursue a
comprehensive in depth graphically illustrated web page without some type
of compensation. We have to support our family. Advertisers may play a
part in the web magazine, but they are becoming less numeous. IF
subscribers want to pay the tab for a good magazine that is MORE than just
a rehash of what they can find on-line, then the password "paid"
subscriber is a reasonable way to continue to provide the type of quality
writing, program reviews, and new development information that our readers
have come to expect from ST Informer. Our motto has always been "Keep on
Keepin' On" and we intend to do that if readers will support our efforts.
We do NOT want to move to other platforms to do our work, but family needs
supercedem a lot of thinks we would rather do.

=B4t it be=20
> finished/working.=20

Yeah, well, I stated it on my page, and though it'd be enough. The Dialer=
=20
is sort of a separate program, and it does all to switch to PPP mode, so=20
this is in fact complete. What is not complete is the SERIAL.STX which=20
doesn't behave right in terms of PPP.

> > explicitly disable the PPP buttons ? Apart from that, there is no hint =
at=20

w this, i=20
> wouldn=B4t even bother to try, (cause i can=B4t connect to my provider us=
ing SLIP).

Yeah, I admitted this was a mistake. It simply derived from the mailing=20
list, where everybody knew what parts are complete, and which ones are=20
not. But even with it being mentioned clearly in the READMEs you had to=20
download the package. And note there are a *few* hints that would make=20

any attentive reader suspicious. Example ? A line in ESTABLISH.TXT says :
"Make sure only 'SLIP' is activated !"

> About the mailing list, and my personal interest in your program. I got a=
most=20
> "not-normal" situation here, since my provider has change their dial-in p=
ool to=20
> a new system, i now call using a special protocol in my ISDN TA, (call i=
t a=20
> modem, though it isn=B4t). The protocol (which is called PPP via HDLC), d=
oes not=20

HDLC is the framing protocol used by PPP.

> gives plain understandable ascii kodes in return, (i think it=B4s PPP CHA=
P, which=20
> as far as i understand is encrypted code). And therefore the dialer as it=
is=20
> today with ascii dial-in script is not suitable for me.

It is ! It's just that you won't use the script part with a PPP=20
connection that supports PAP or CHAP, both would be handled by the=20
SERIAL.STX.

Cheers Peter

Good old fashioned strategic gaming.

http://www.ebay.com/aw/item.cgi?item=gee8938

Start at 7 US + 6 US shipping

The Hunt for Red October
The Ultimate Submarine Simulation based on Tom Clancy's
best seller. PC 5 1/4 floppy Sealed New in Box.
If the game doesn't get you, you can READ THE BOOK as it says
the complete book is included free in the game. Bonus !

http://www.ebay.com/aw/item.cgi?item=bky692215

Start at 4 US + 5 US shipping

Worlds of Ultima: The Savage Empire 's Box, Map and Cluebook
This is just the Savage Empire Box, Map, and the Cluebook.
Box and map in very good condition. Cluebook in great condition.

http://www.ebay.com/aw/item.cgi?item=hbf722628

Bid at 15 US + 5 US shipping

Ultima 7: The Serpent Isle for the PC
The add-on for Ultima 7 that lets you explore new lands.
Contains: 7 x 3 1/2 working floppies, Cloth Map, Beyond the
Serpent Pillars Manual, Origin catalog, Install Guide, Quick Ref.,
Cluebook offer, Disk Exchange form, Read Me first, and the box.
Box shows some wear and the top right corner on the side has some
tape on it. Also very small ink scribble on the front. All other
items are mint.

http://www.ebay.com/aw/item.cgi?item=nam2842

Bid at 26.10 US + 5 US shipping

Large Collection of Sierra and Misc Games
This is a LARGE collection of Sierra Games from their Bookshelf
Collection (I think) as it looks like they come with manuals, disks
and come in a plain Sierra boxes (only 4 boxes here). All are PC
based and all floppies tested OK. All disks and manuals are
originals. Also some non-Sierra stuff thrown in.

Heroes Quest 1 on 3 1/2 and 5 1/4 with manual
Quest for Glory 2 on 3 1/2 and 5 1/4 with manual
Police Quest 2 on 5 1/4 with manual
Manhunter on 5 1/4 with manual
Kings Quest 1 on 3 1/2 and 5 1/4 with manual and hint book
Kings Quest 2 on 5 1/4 with manual and hint book
Kings Quest 3 on 5 1/4 with manual
Kings Quest 4 on 5 1/4 disks only
Goldrush on 5 1/4 with manual
Space Quest 3 on 5 1/4 with manual and hint book
Leisure Suit Larry 2 on 5 1/4 with manual
Leisure Suit Larry 3 on 5 1/4 with manual
Conquest of Camelot on 5 1/4 with map only
Hoyles Book of Games on 5 1/4 disks only
Black Cauldron on 5 1/4 disks only
Silpheed on 5 1/4 disks only
Solitaire on 5 1/4 with manual
Where in Europe is Carmen Sandiego on 5 1/4 with manual
688 Attack Sub on 5 1/4 with manual
Days of Thunder on 3 1/2 and 5 1/4 disks only
Epyx Home Video Producer on 5 1/4 disk only
Quest for Glory 3 Hint Book
Space Quest 2 Hint Book
Kings Quest 6 Hint Book
Assorted Game Manuals
4 plain Sierra Boxes

PHEW !! That's all. A lot of playing involved here !

http://www.ebay.com/aw/item.cgi?item=rbt21010

Bid at 15.50 US + shipping. Bid is for the whole lot and
shipping determined by what the high bidder wants to keep.

SNES The False Prophet
The conversion of Ultima 6 for the SNES. Great playing.
Comes with box, manual, cartridge and consumer info insert.
Box is in great condition. Manual is in used condition but
intact and the cartidge has the copyright label on the back
partially missing. Hours of fun on the SNES.

http://www.ebay.com/aw/item.cgi?item=liw07640

Bid at 20.51 US + 4 US shipping

Collection of 3 SSI games
A collection of 3 old SSI games all for PC.

Champions of Krynn on 5 1/4 Sealed New in Box. There is sticker
saying a poster is included in it.

2623. ListServ Idea

Newsgroup: comp.sys.atari.st
Date: 1997-05-19 00:00:00 UTC
From: Nelson Nieves <Nelson@cybernetworking.com>
Message-ID: <01bc6465$15fce120$038508cf@Computer2.cybernetworking.com>
Source record: 122216

To all Atari 8-bit/Atari ST users

Hi,

I am the programmer of the SpartaDOS NN Tools disk 1.

Some of you know who I am since you have downloaded the NN Tools files from my autoresponse SMTP server.

I am also the owner of a small ISP in Philadelphia, PA (www.cybernetworking.com).

I have an idea of creating an Atari 8-bit and an Atari ST listserv (preferably will be done in digest mode of 10 messages). The catch is that it has to be USER supported.

I have given this a lot of thought and have come up with $24.00 per year for access to both lists. A WEB site for Atari 8-bit and Atari ST links will also be set up and I will add as many links as are submitted, maybe even creating a search engine(?) for Atari related stuff (but this will only happen after the lists are set up and stable). Latter the lists may also be broken down into sections, Atari ST C programmers, Atari 8-bit Action! programmers?, etc. Maybe done through a vote?

Running a list server can eat up a lot of bandwidth so the user supported list is the only way to go. This will allow for the purchase of the listserv software, more bandwidth and, of course, to pay for my time and server use.

I really need to hear from you, whether it be a complain, insult, support, or idea. Send e-mail to atari@cybernetworking.com

As many people know, the web site was provided by Frank Charlton, and only he has access to it. Unfortunately, Frank is currently offline and that's why the site is so out of date.

However, all will change very shortly. AC now has its own web space in our own name with an easy to get to address!

I'm hopeful that AC#5 due out in mid-June will have the full details, but no promises. Even if we can't get the details into the next issue, I'll make sure they are posted here as soon as we are in a GO position.

Rev.,

You may wish to check out the Titan Designs site. They have something called TUS which updates an ST to IDE hard drive support, HD (1.44 mg) Floppy, hi speed serial and up to 12 megs of RAM.

SLIP is fully functional. STinG runs on my machine every day, and does
it's job. It does for me, as SLIP is sufficient for me. I do not need
CSLIP and PPP. I could stop putting them in, if you don't want them,
would give me a lot of spare time.

Fortunately your mail here is not in any way representative for the lot
that I got, so I'm not gonna stop the work. ;-)

>
> Now, a good question is, what was your motivation to release the package in
> such an early development version ? Publicity ? To prevent people from buying
> CAB 2.0 ?

Simple : Because many people asked for it. Too many to handle it via a
mailing list. Why do you call it an early version ? I must deduce you
haven't even downloaded and looked at it. Publicity ? Well certainly not
the main aim, as it basically floods my e-mail account. To prevent people
from buying CAB 2.0 ? Poor soul who has no idea what he's talking about !
I even recommend to use CAB 2.0 with STinG, as it is so much advanced
compared to CAB 1.5

>
> I think this is a lot preferable to freely distrbuting an incomplete package.

Get the package first and learn what nonsense you're saying here. As you
can't do that if I'd take it off the net, I won't do so.

> frustrated customers and bad publicity. You will also make the development
> process harder to follow.

Wrong. There have been beta versions of many other programs publicly
available before. Your definition is the problem here. Downloading a
beta version, I understand I must be ready to encounter, and deal with,
serious bugs. Nothing to do with being public or not. And like the Netscape
betas, the STinG beta can be nicely used already, as also lots of users,
from whom I get mail, confirm. You seem to have no idea how a networking
stack work, otherwise you knew that lack of PPP is comparable to, say,
the lack of the mailto: feature in Netscape. For some people Netscape
would be useless without it, but many others don't need it.

If for you PPP is so important for a complete networking package, why
didn't you call STiK incomplete ?

Cheers Peter

2631. Help needed with SCSI Termination power

Newsgroup: comp.sys.atari.st
Date: 1997-05-19 00:00:00 UTC
From: Andrew Holt <andy@aholt.demon.co.uk>
Message-ID: <01bc6473$f1178b80$LocalHost@aholt>
Source record: 122224

I have split up the SCSI Chain on my 1040STFM but I think I need to provide power for the SCSI termination.

Setup

1040stfm --- ICD Link 2 ---- Quantum SCSI HD ----------- SCSI Terminator

The 1040stfm is connected to the ICD Link 2 by a DMA Cable
The ICD Link 2 has a SCSI 50 Way through Flat cable connected to it with 2 inline connectors. The scsi terminator is at the end of the Flat Cable.

When I had a ZIP drive connected to the end of the flat cable, via a 50way to 25 way adapter, I had to provide a 5V and 0V supply for SCSI Termination Power. This was via a supplied joystick port connection lead to the other 25 Way connector on the ZIP Drive. Now that I have removed the ZIP Drive, I cannot provide this power connection and the hard disk will not function.

Does any one know which connections I need to provide the power to on the 50 Way flat cable to supply the SCSI termination power ?

Please respond via email as I do not check this group frequently

TIA

Andy

2634. 28,800 on an st with mintnet

Newsgroup: comp.sys.atari.st
Date: 1997-05-20 00:00:00 UTC
From: hsideras@mettav.demon.co.REMOVE.TO.REPLY.uk
Message-ID: <4331_hsideras@mettav.demon.co.REMOVE.TO.REPLY.uk>
Source record: 122030

Hi Jon, on 18 May 97 you wrote: ...respect, brethren
j>
j> I am running a mega ste and am about to invest in a 28,800 modem.
j> (Presumably a st - modem speed of 38,400). Am i wasting my money...
j> or will the st serial port (and mintnet) cope? I'm using hsmodem.
j> Any thoughts please?

When you say the ST serial port I presume you mean the Modem 1 port? This only goes to a maximum speed of 19k2. You'd need to switch to the Modem 2 port, which technically supports speeds of 38k4, 57k6, 76k8, 115k2, 153k6 and 230k4! You'll need DRVIN and SCC to use these and your terminal software will need to support modem 2 and the higher baud rates.

In practise, UK BT phone lines are only *guaranteed* to support data rates of a 14k4 modem, but in practise I get a minimum of 26k4 and more usually 28k8 connections with my 33k6 modem. Only when I'm connecting to my Internet line do I get 31k5 - never full 33k6 yet.

On a cable/mercury line I understand that a full 33k6 connection can be expected - they're far higher quality than BT lines.

At various times you'll find firms who are doing offers on modems. I recently picked up this Tashika v34 Fax-Voice Modem for 65ukp +VAT (82.19ukp) from Software Warehouse who advertise in Computer Shopper. The first one I had was completely duff and and to be returned (didn't work on PC or ST), but the second one was fine. They're fully BABT/CE approved and a 3-year Manufacturer's warranty - plus they're made in the UK.

If you're prepared for the possibility of using their returns service, I don't see any reason to avoid this modem. It doesn't have its own on/off switch, but that's not a problem and apart from that it's perfect.

Check out Pacifist (freeware) which is an ST emulator for PC. You will need a copy of the TOS ROM for it to run.

All this is in my Quick Faq at

```
For Sale:
---------

* 4160 STE (TOS 1.62, 4 Mb)

* MEGAFILE 60

Canadian offers only! Will sell to best offer, or trade both
together for either of the following:

* MEGA-STE (TOS 2.06, 4Mb Ram, HD Floppy, Internal SCSI HD)

* Stacy 4 (TOS 1.04, 4Mb Ram, Internal HD).

Internal hard disk size un-important, local prices on SCSI drives
are rather affordable.

NOTE: nothing against our friendly neighbors from down south,
just Canadian banks causing troubles for cashing foreign
currency of any kind, including American.

However, if you're interrested in trading your MEGA-STE
or your Stacy, we can arrange something, as there is no
currency exchange involved.

More details available on my homepage.

Source record: 122035

```
Requested minimal specifications:
-----------------------------------------------
MEGA-STE 4 Stacy 4
---------- -------
TOS 2.06 TOS 1.04
4Mb of Ram 4Mb of Ram
Internal HD Internal HD
-----------------------------------------------

Internal HD capacity is not important, as replacement SCSI drives
are available locally, but I do need that Internal SCSI controller.

Preferably offers from within Canada or, if the deal is right,
from United-States... although I would rather avoid the burden
of Canada Customs if buying from the US.

e-mail offer and details (condition of equipment, included goodies),
and specify the currency when quoting your offer.

See my homepage for more details and possible trade-in solutions
on other Atari good I have for sale.

2641. Falcon ST compatibility

Newsgroup: comp.sys.atari.st
Date: 1997-05-20 00:00:00 UTC
From: alkio@hkkk.fi
Message-ID: <5lrtq8hmq1@ankka.csc.fi>
Source record: 122037

Hi,

I was wondering if Backwards 3.10 is the last version of Backwards ever made? Since I haven't found 3.10 to be more effective than 2.83 and 2.83 is easier to use I am usually using 2.83...

I would really like to get my Falcon to be more ST compatible than I can get with Backwards. I have tons of old ST games I would like to play on my Falcon but very few of them work. It is kind of irritating that I _can_ run most of these with PacifiST on a PC at work...

Even more irritating is that many times I can _almost_ get a game to work with Backwards and Falcon but not quite... For example I have one game which does the following:

If I run it on the Falcon (with or _without_ Backwards) in ST-LOW graphics mode the starting picture comes just fine but after a while the screen flickers a bit and goes dark (and my VGA monitor doesn't get a suitable signal anymore - it doesn't work on a TV either).

But if I run this same game without Backwards but in other than st-low resolution (for example the Falcon resolution which is a bit larger than st-low) the game seems to run just fine! But it is unplayable since the colors on the screen are all wrong! If I could just change that color palette somehow... Very annoying...

I wish I could just load an older TOS to my Falcon...

Greetings, Jouni

2642. MiNT an X?

The ST has no SCSI connector, just a proprietary 'ACSI' connector.
You will need a ACSI<>SCSI host adapter like an ICD Link or The Link'96

This is all in the Atari ST Quick FAQ at:
http://www.geocities.com/MotorCity/2090/quickfaq.htm

Hello,

George (kyriak@mail.geocities.com) wrote:

: Do you use SCC driver from the hsmodem 7 ? This is the one that gives
: you extra speed(Modem 2 and Serial 2 only).
: I use Connect to get online, then enable STIK and its ok!! 115200 with
: a ZOOM 28800 modem. You must set SERIAL_PORT = Modem 2 and BAUD_RATE =
: 115200 in your Stik default.cfg file and its ok!!

It will not be o.k. Modem 2 does not support 115200 bps without
modification! An unmodified Modem 2-port supports a maximum speed of
153000 bps which is not supported by Modems. To get 115200 bps you have
to modify the hardware in rearranging one pin connection or use Serial 2.
The procedure of the modification is described in the docs of HSModa 07.

Bye,

Kerstin

Well, I just bought one of the $59 Mega STe boards from Toad's sale, just to fool around a little..

However, my experience is limited strictly to STs and Mega STs. I can recognize MOST of the ports, etc, but there are some I'm bnot sure on or baffled..

1) The power supply pinout - is it a standard PC power supply pinout? I have a PC power supply running my Mega ST + hard drive, and the MB pins are still available.

The ports I recognize on the left side are:

Keyboard connector (uses a mega-style keyboard - can I substitute my spare PC keyboard somehow?)

Cartridge port

MIDI IN/OUT

?? A small female port. No idea on this one.

Reset button

On the back:

Two RCA style connectors - I'm assuming audio-out plugs?

Joystick 0 + 1

Parallel port

ACSI port (will my ICD Host adaptor work? I hope so!)

Above the parallel & ACSI: Serial 2. I'm guessing this is the "enhanced" serial port I've heard about. What happened to the normal serial port? I don't see another one..

Looks like an RF output port similar to the one on my 1040FM??

Monitor plug

Floppy plug

As well, there are a few unfamiliar sockets on the board itself:

Empty, labelled "spare1" and "spare2" to the right of the SIMMS (assuming facing from the front)??

I've read that only DIP switch 7 does anything?

Another empty socket: U405 about 2 inches behind the SIMMS?

I guess the empty square socket by the 68K is for a 68881?

I'm assuming the port at the top right side is for the internal floppy?

Also, I thought this was supposed to have a VME bus slot? Where is that?

Any other important things to be aware of with this machine? New video modes (I know it has 4096 colours). I know about the better sound - is there a list of what's changed somehwere?

I would prefer email, but I'll read this group as best as I can.

Thanks,
Mattias

Source record: 122045

Hi,

I am trying to download STonX for UNIX, but am having some difficulites
with the URL. Is the complang.tuwien site still up and running?
Otherwise, does anyone know of another place where I can get the source.
As a last resort, could someone who has the source please attach to an
email and send it to me.

Thanks in advance,

Anton.

I'm not having problems with the modem 2 port on my Falcon, but I do however still get a DNS cache error the same as I did with V1.70f. I seem to be getting a PPP connection ok, but trying to resolve OXO or my host domain, the cache error occurs. Any ideas?

Your SCSI drive might be internally terminated, you can normally see
this by opening it up and seeing if you have a couple of resistor packs
plugge din, they normally have a plastic tab on them so you can pull
them out easily. If not then you will need to provide Term Power by
changing a jumper ont he back of the drive, I can't find any docs for my
drive ATM but going from memory it is the far right jumper which neeeds
to be enabled. If you can then look at their website, they noramlly
keep technical docs there.

Hello,

Roni Music Home Page offers free down load of the Sweet Sixteen MIDI
Sequencer for Atari computers.

Sweet Sixteen is a comprehensive and powerful MIDI sequencer for
PC/Windows and
Atari ST/STE range of computers.
Sweet Sixteen offers Piano Roll, List and Transform edit pages as well
as a
dedicated Mixer page you can use for your favourite synthesizer.

Three versions are available:
1. A shareware version which is a complete version of Sweet Sixteen
which you may try out for 30 days.
2. A demo version which is a complete version of Sweet Sixteen with all
file saving disabled.
3. A "lite" version which lets the user save files but certain other
functions are disabled.

Check it out at: http://home1.swipnet.se/~w-11396

Sweet Sixteen is $ 29.95 US

The new web address is:

http://www.complang.tuwien.ac.at/nino/stonx.html

and seems alot faster than the old one - although the old one
(http://www.complang.tuwien.ac.at/nino/stemu.html)
points to the new one. I've sent a copy of the source to you as it's only
170K and I might as well use my free net connection whilst it lasts.

PS: STonX has now been updated :-)

Hi all,

sorry for stepping in this late, but...

Don Bacon (dbacon@ford.com) wrote:
: Nicholas Bales, Toulouse, France wrote:
: >
: > Anyway I suppose you need some software for it and probably also a copy of
: > MSDOS (two drives too I suppose). Good luck...

MSDOS 4.1 was supplied with the Supercharger emulator.

: The Supercharger was in a box by its self, but had a disk ov utilities t
: to provide the opposite, ie using the Atari as a ram disk to the
: Supercharger PC.

I think I must oppose here. I don't seem to remember any way to use the
Atari's RAM with the PC. The opposite, i.e. the Supercharger as a RAM disk
to the Atari, was supposed to work but didn't when I used mine. But
still software was needed on the Atari to switch to the PC. There was a
TOS program to do this, and also an accessory to switch back and forth
on a hotkey. There also was PC software supplied to enable messaging
between DOS and TOS apps, and leaving the PC running while working with
the Atari.

: I have the original disks for this but have not used them in a long
: while and they may not now work. If you are intrested please drop me a
: line and I will see what I can find that is still working.

If these don't work, mail me for a solution. I'm also willing to sell
my complete Supercharger v1.5 with 1 MB of memory, DOS 4.1 and package
for $50 obo, and also my ATonce 386 SX emulator for the MegaSTE with
1 MB of memory, software and package for $70 obo.

Yours,
Erik.

All pre-ordered copies of AC#4 were sent out in early April! In fact no-one
to my knowledge has contacted us to say that they haven't received their
copy, but that's only really applicable to direct subscriptions.
Subscriptions through local dealers sometimes take a little longer, but
with regard to Norway see below!

>Anyone outside of the UK perhaps? I live in Norway and have my
>subscription through the local representative, but I suppose he hasn't
>received them from Scotland since I haven't heard or seen anything yet.

I suggest that you contact P Monstad, your local dealer, as soon as possible
then because I personally sent his supply of magazines on the 5th April!

Can you please contact us direct at - ataricomputing@cix.co.uk - in future
as we can sort any problems out a lot quicker that way rather than having
to trawl through csas looking for problems :-)

Best wishes

The demo or the real thing?

m> i. The ST-Guide texts

Funny! I have the demos of v1.0 and v1.6 and both have HYP and REF files.

m> ii. ARTWORK.PRG

This is, indeed, a commercial vector graphics package - very nice, too!

A demo version has recently found its way to the UK. I got mine from The
Tavern BBS. It's 600K+ and the demo will not Save or Export.

Or you can find it at the ASH BBS.

2677. Rare ST games for sale

Newsgroup: comp.sys.atari.st
Date: 1997-05-20 00:00:00 UTC
From: Satcom2 <svenhard@primenet.com>
Message-ID: <01bc6581$9dad5420$2620a5ce@Primenet.Primenet.com>
Source record: 122073

Sheer Agony* ST/Ste/TT (1996) $20.00
*note: last commercial ST game made! also quite rare! Kind of a poor mans Myst or 7th guest.

Paladin (1988) $5.00 good RPG
Captive (1990) $12.00 great RPG
Ishar 3 (1994) $15.00 best RPG!

and the rarest RPG of all: Ultima 6 ST* $best offer ($40 plus shipping so far, 3 days left, hurry and bid if you want it!) c'mon it's worth more than $40! <grin>

*mediocre box condition, missing main instructions, just use another version's instructions, same thing.

here's a few more:

(all with boxes, 90% with instructions)

Mr. Do! Run Run(1990) $12.00 Mr. Do! He runs.
Runs.
Viking Child(1990) $12.00 the Lynx classic
in a scarcer ST version
Ultima V(1989) nice cond! $20.00 not as rare as 6, but
still uncommon,and fun
Outlands(1989) $5.00 typical shooter
Dragons Lair 3(1992) $12.00 just what it
says,mediocre but rare
Space Ace 2(1992) $12.00 same as above
Gauntlet 3(1991) $10.00 strange game,
good collectors item
Ween(1992) $12.00 fun game, like
Monkey Island but I liked it more
Sleeping Gods Lie(1991) $10.00 a really poor mans
Doom/RPG
Street Fighter 2(1992) $15.00 looks great,
great animation,scarce
Atari Gemini CD (shareware etc.)(1993) $12.00 2872 programs and text files, misc. shareware

More to come. Feel free to e-mail me with offers/inquiries etc. I have many other original games with and without boxes, tell me what you want and what you will be willing to offer.I have a huge collection, some duplicates, and just want to get rid of about 50% of it or more.Too lazy to type it all up.

I left Demon after about 8 months of increasingly poor service. I
reactivated in December/January and found no improvement :-(

>Can anyone give me an Email address or phone no. for Zetnet so's I can ask thewm
>about their service, please ?

Tel: 01595 696667

Email: info@zetnet.net

For anyone that's interested Zetnet have decided to take a regular advert
out in Atari Computing magazine, so they are very interested in the Atari
scene, although I must state categorically that AC do NOT endorse or
recommend one company or ISP over another, and we don't take any
responsibility for any problems you may have with a provider.

I'm on Zetnet and have very few problems, most problems are with the
developing Atari software rather than with the 'net! That doesn't mean
you won't have problems, but most of them can be overcome quite easily!

Best wishes

Mike Kerslake

2682. 3 Engineers.. a joke really folks!

Newsgroup: comp.sys.atari.st
Date: 1997-05-20 00:00:00 UTC
From: chris@compdirect.com
Message-ID: <AFA77AC59668153AF0@207.167.2.22>
Source record: 122078

3 Engineers are on their way to a convention in a car. A Chemical Engineer, Electrical Engineer and a MicroSoft Engineer. The car breaks down and being Engineers they decided that they could solve the problem and save money on a tow truck.

The Chemical Engineer figured it was bad gasoline, maybe the mixture was watered down. So, he changed the gasoline, no difference.

The Electrical Engineer figured it had to be the Electrical system, so he changed some wires, no difference.

The MicroSoft Engineer decided that it had to be something simple. He closed all the windows, shut down the car, restarted it and opened all of the windows, away they went.

Later, the other two Engineers asked the MicroSoft Engineer how he figured out that this was the problem and he replied....

"This is what we do all day at work".

All the best,
Chris @ Computer Direct

http://compdirect.com

2683. Logic and Atari TT

Newsgroup: comp.sys.atari.st
Date: 1997-05-20 00:00:00 UTC
From: fried@achilles.net
Message-ID: <5ltarf$lqf@hermes.achilles.net>
Source record: 122079

Hello! I recently got a TT, and I am pleased with it except for one
thing, Logic will not boot up! I get a box saying, "Key not recognised"
Logic (V.2.01) works fine on my Mega Ste, and of course I made sure that
the "Log 3" Key was firmly in place. I also tried scanning using Touch-Up
to make sure that the cartridge port was working properly, and it was.
Has anyone else had this problem? Logic is supposed to work on a TT.
Any help is much appreciated. Mark

2684. MinTNet and Demon...

Newsgroup: comp.sys.atari.st
Date: 1997-05-20 00:00:00 UTC
From: gary@imco.demon.co.uk
Message-ID: <864142154_OASIS_@imco.demon.co.uk>
Source record: 122080

Old problem. Quick solution needed. I've installed the PPP-kit and
everything works except connecting to Demon's network. When I dail in
and the line rings before the modem answers I get a good connection,
but if there is no ringing first my IP address is returned wrong and
the link crashes reporting 'timeout getting config...(blah blah).

Any ideas of how I can modify my chatfile to stop this happening?

Gaz.

In article <01bc64a1$bb7ee8a0$038508cf@Computer2.cybernetworking.com>
"Nelson Nieves" <Nelson@cybernetworking.com> said:-

>I have an idea of creating an Atari 8-bit and an Atari ST listserv

You mean a mailing list? Listserv is a program.

>I have given this a lot of thought and have come up with $24.00 per year
>for access to both lists.

Sorry, you want us (list users) to pay to have access to what we will
write to the list?

>A WEB site for Atari 8-bit and Atari ST links will also be set up and I
>will add as many links as are submitted, maybe even creating a search
>engine(?) for Atari related stuff

How much? $30 for links page, $40 per year using the search engine?
Links, that's good, but what about real content?

>Latter the lists may also be broken down into sections, Atari ST C
>programmers, Atari 8-bit Action! programmers?, etc. Maybe done through a
>vote?

That's a good idea. Strange that nobody had it before...

>Running a list server can eat up a lot of bandwidth so the user supported
>list is the only way to go. This will allow for the purchase of the
>listserv software, more bandwidth and, of course, to pay for my time and
>server use.

Many mailing lists run for free, on servers where ML used bandwidth
and CPU time is nearly not noticeable. There are freeware ML programs. You
can even set up a simple ML without special software, only with sendmail,
or even NOS.

>I really need to hear from you, whether it be a complain, insult,
>support, or idea.

Well, your idea to make money on our back is not so bad, but you
should perhaps make a "reality check" on your motivations...

Bye! Bruno.

: Anyways, my TT displays "TT-RAM XXX... 4096K" then 4 bombs.
: There are three jumpers on the TT-RAM board plus another three
: jumpers between the TOS 3.06 chips.

: I presently have 4Mb ST-RAM also.
: Which jumpers do I need to change?
: Thanks.

The newer TT RAM boards it will have 6 jumpers labeled w101 to w106.

The jumpers settings are as follows:

w101 w102 w106
1M x 8 SIMMs (4MB) 2-3 2-3 2-3
4M x 8 SIMMs (16MB) 1-2 1-2 1-2

jumpers w103 & w104 are for the start address remain the same 2-3

jumper w105 is for burst mode ON 2-3 OFF 1-2

I don't think a 8-bit email-list will eat up any bandwidth, and if you happen
to run any decent (ei UNIX) OS on the server, several listservers can
be found for free.

Even for the ST, I can see no need for yet another source of information.
Especially if it will cost money.

2693. Good News For RGB Users

Newsgroup: comp.sys.atari.st
Date: 1997-05-21 00:00:00 UTC
From: ab453@cleveland.Freenet.Edu
Message-ID: <5ltr4k$74@alexander.INS.CWRU.Edu>
Source record: 122089

Good News For RGB Monitor Users!!!!

A new product, the VideoTurtle from Turtle Enterprises, is going to be available soon. This product converts RGB known as TV RGB, into S-Video signals. Replacing the need for an older TV RGB Monitor.

ANY SYSTEM, that outputs TV RGB, can use the VideoTurtle. Some of the many are:
Sega Genesis/32X/CD-ROM
Amiga
Atari ST
Neo Geo
Apple IIgs
MSX II/MSX II+
Adam
Commodore 128
TV RGB Monitors(for uses other than computer/video games)
Video Arcade Games, ones that output RGB.
IBM CGA

Please, no flaming! If interested in the VideoTurtle from Turtle Enterprises, please email me-ab453@cleveland.freenet.edu

Thank you!

2694. Upgrading a 520STfm to 1 meg?

Newsgroup: comp.sys.atari.st
Date: 1997-05-21 00:00:00 UTC
From: dooley@infomatch.com
Message-ID: <5lu8jm$9fs$1@berlin.infomatch.com>
Source record: 122090

Hi all,

I'd like to upgrade my old 520STfm from 1/2meg to a whole 1meg!
Is there any texts on how to do this? I have a couple that tell you
how to upgrade to 2.5 and 4 meg. But I only want to goto 1meg as I have a
4meg 1040STe and I'm thinking of selling the STe and buying a Falcon and
keep the STfm for games. Can anyone help?

Thanks
Johnny

Oh yeah!!

I have 2 x 256k simms (30pin)110ns or 90ns (shouldn't matter anywayz)

Caio!

>
> is sort of a separate program, and it does all to switch to PPP mode, so
> this is in fact complete. What is not complete is the SERIAL.STX which
> doesn't behave right in terms of PPP.

Which i ofcouse could read in the README file, right ? 8-)

> Yeah, I admitted this was a mistake. It simply derived from the mailing
> list, where everybody knew what parts are complete, and which ones are
> not. But even with it being mentioned clearly in the READMEs you had to
> download the package. And note there are a *few* hints that would make
> any attentive reader suspicious. Example ? A line in ESTABLISH.TXT says :
> "Make sure only 'SLIP' is activated !"

As i explained, i received the file via an alternative file distributing network,
(so i would have received it wether or not it supported PPP). I received all files
in the alternative file network.

About the ESTABLISH.TXT, what does the line actually mean ? (Make sure only SLIP is activated does not make any sense, when i want to test PPP, which the example gave me an option to do). It did however give me an hint, that it probably didn't work. unfortuanlty it took me about a couppel of hours and intens testing before i realised that.

> HDLC is the framing protocol used by PPP.

Okay, perhaps not that abnormal anyway 8-) (I know too little about the technical parts of PPP/SLIP/Whatever. I'm good using my phonelines, thats all 8-))).

> It is ! It's just that you won't use the script part with a PPP
> connection that supports PAP or CHAP, both would be handled by the
> SERIAL.STX.

Aha, that sure makes sense. Looking forward to see it again, (when it's working) if i'm alive at that time ofcouse 8-))))

And now i understand why the new WepSuit from Oxo also don't make any sense. It has options for PPP as well as using the same simular kind of script.. (No wonder why people gets frustrated. Nothing makes sense unless you're face to face with the author 8-)). Thank god for manuals and fully explained README files.. Haha 8-)

I did download the lite version, but it looked to me like it was crippled
with annoying shareware messages, which makes it as much a shareware version
as the
other one.

Nice program though..

The MC146818A is the Real Time Clock chip.

The TT battery is 3.6V Lithium non rechargeable made by Tadiran and can
be purchased from Maplin Electronics (UK) (Part Number AS46A price 14.13
UK Pounds). I have only 3 months ago replaced the battery in my TT for
the
first time, you may have other problems which are draining the battery.
Check the power down circuit, transistors 2N3904 and 2N3906 numbered
Q402 and Q401.

regards

2709. Can WP 5.1 docs be translated into ST WP 4.1 files??

Newsgroup: comp.sys.atari.st
Date: 1997-05-21 00:00:00 UTC
From: csjjh@ux1
Message-ID: <5lv4nl$8ko1@news.eiu.edu>
Source record: 122105

Hi,
I just recently got WordPerfect 4.1 for my ST & love it. I've no problem loading a 4.1 ST doc into a PC at work with WP 5.1 but can not save in WP 5.1 and read the file back again at home on my ST.
The problem is even worse with Microsoft Word. Word can save & read in WP 5.1 mode but not in 4.1. I have 2 bad choices now. Bad choice #1: write document in ST WP 4.1, save as a text file, load doc in any word processor I want but loose all formating codes, edit doc, save at work again as text file, loos all formating codes when I load it up at home to work on it more. Bad choice #2: Create Doc at home & save in ST WordPerfect 4.1 mode, go to work load up in WP 5.1, save in WP 5.1 mode, get in Microsoft Word, load the 5.1 version of my original 4.1 doc, edit, save as a text file so that I can work on it at home & loose all formating codes.
Arrrrrrgh! There's got to be a better way. Anyone know of a program that will translate WP 4.1 files back and forth to either WP 5.1 or Word format? I need help bad.
Thanks for any suggestions you may have.
Later,
JJH

No. There's no way to do that because of Atari's particular parallel port
(on STs and Falcons).

You will need a SCSI Zip drive and an ACSI/SCSI host adapter *with parity*
such as Link'96 or The Link II, plus driver software.

>tries to display it, which looks like garbage ? Then you save it ? Of
>course this fails ! Hold the left mouse button when clicking the link to
>the binary instead, and select a name.

Part of the problem is that your server is serving the archive files
with a Content-type of text/plain; naturally Netscape is going to try
to display the file if you tell it that it's a text file. If possible,
try to arrange for the files to be served with a content type of
application/x-lharc or application/octet-stream; then Netscape won't
(or at least shouldn't) try to display them, but will go directly to the
"Save As" dialog. Depending on what server is being used on your end
and how it's set up, you may be able to configure this yourself;
otherwise, you'll have to talk to your local webmaster.

I've only got more bad news for you really, the modems that rung before
answering were the US Robotics modems, these were replaced last week so
you won't be able to connect until this problem is fixed :(
The problem is (IIRC) that the Ascends use passive rather than active
ppp negociation but as t how you can fix it with Mintnet then I'm sorry
but I have no idea.

Hi svenhard@primenet.com, on 20 May 97 you wrote:

s> I was wondering, just in case I find a used Falcon for cheap,
s> which I am looking for, can I hook my old Supra drive from my STe up
s> to it? If so do I need some extra cable,and is it expensive? Just
s> wondering,because I could get a Falcon with no HD for a lot cheaper
s> than with one.

The Falcon has no DMA port for HDs so you can't connect straight to the
19-pin plug you have.

Falc. does have a REAL SCSI port though so you can connect your HD directly,
bypassing the host adapter inside the Supra shoe box.

As a bonus, the h/a will be worth about 20UKP to some people!

>4meg 1040STe and I'm thinking of selling the STe and buying a Falcon and
>keep the STfm for games. Can anyone help?
>

Expanding STFMs is a bit of a hassle. It requires one of the following:

-soldering DRAM chips in the empty sockets (a little bit more complicated than it sounds)
-buying a SIMM expansion board such as the Marpet XTRA Ram or some other one.
-making a DIY SIMM expansion like in those text files. You should be able to get that to work with 4x256K SIMMs.

I'm not sure if these techniques are worth the hassle for just an extra 512K.

If you absolutely want just a 1Mb machine, keep the STE with 4x256K SIMMs (you can get these 2nd hand for US$5 where I live), resell the STFM and the 4x1Mb SIMMs separately (or keep them so you can upgrade your Falcon if it's one of those rare 1Mb machines).

No, the Atari's parallel port does not support all necessary signals to
do that. So, for Ataris, you need the SCSI Zip. Maybe the IDE insider
also works, but I can't promise. To be on the save side, use SCSI (either
external or internal, where the internal version has the advantage of not
being limited to IDs 5 and 6).

Btw, this is a FAQ.

Ciao

2734. High Density Disk Drive Mod (no AJAX chip required)

Newsgroup: comp.sys.atari.st
Date: 1997-05-22 00:00:00 UTC
From: bm827@FreeNet.Carleton.CA
Message-ID: <5m1jmd$60d@freenet-news.carleton.ca>
Source record: 121980

I found this when going through some old disks. It still may be of
interest to some. The mod was originally written up for the local
Atari Users Group and presented at a meeting in 1993. Some updates
have been added.

Randy Kwak
bm827@freenet.carleton.ca

****

High Density Disk Drive Modification by Randy Kwak

What you need:

- CO25914 (Video Shifter Chip) contained by every Atari ST

- WDC 1772 02-02 chip (floppy controller chip) contained in most (newer)
STFM's, Megas, and (probably) STE's, etc. According to
"Atari ST Review (Mar., 1993)", 95% of these chips
will work at both 8 MHz and 16 MHz

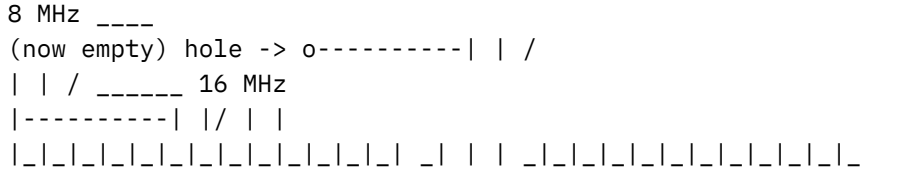
N.B. If your floppy controller chip is the older "00-02", it will
NOT work (but it will fry nicely). A chip upgrade is needed
for the mod. (N.B. I do *NOT* have or need an AJAX chip!!!)

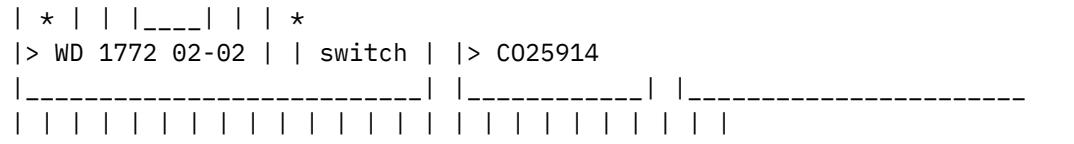
- HD floppy drive
I have an older Chinon and TEAC with multiple jumpers which work
fine. Make sure you change the drive setting from "1" (typical
IBM setting) to "0" (Atari setting).
(1997 note: many recent HD drive have *NO* jumpers whatsoever
and may not work in an ATARI; see if you can try before you buy.)

What to do:

Desolder pin 18 ("clock") of your drive controller chip and bend it up
and out of the hole. Solder a wire to it. Connnecting the wire to the
(now empty) hole gives you an 8 MHz clock (double density). Connecting
the wire to pin 39 ("16 MHz out") of the video shifter chip gives you
a 16 MHz clock (high density).

I have installed a toggle to switch between 8 MHz and 16 MHz. My setup
is the following:





Formatting programs:

- Diamond Format (HD 3 1/2", 18 & 20 sectors per track, IBM boot sector)
- H-Copy (HD 3 1/2" & 5 1/4", selectable number of sectors)

Note that the normal formatting routine from the desktop will only give you DSDD disks. This is because the HD formatting routine was not built into TOS until TOS 2.6. You *MUST* use a software formatter or have pre-formatted disks.

Problems you may encounter: "Damage on drive XX; check connections.."

- On 3 1/2" floppies, change step rate for drive to 6ms or 12ms (Double Click's "Floppy Configurator" is great for this). Reason: when you double the clock rate, the step rate is halved.

- On 5 1/4" disk drives, change step rate for drive. Additionally, you may need to construct an interface to provide the necessary logic and buffering for the drive select and motor on signals. (1997 note: I can dig this out if anyone is interested).

- IBM-compatible floppy drive may not work in an Atari. Check first to see if it works as a normal Double-Sided Double-Density (720K) drive (no modification necessary - just plug it in after changing drive number to "0"). If the floppy drive light stays on all the time, the floppy drive cable is in upside down. If it doesn't work as a 720K drive, it probably will not work as a 1.44 drive unless you can set the jumpers and configure the darned thing (you would have to figure out how to do it on an individual basis).
(1997 note: most of the recently manufactured HD floppies do not have any settable jumpers and may not work in this mod.)

Usual disclaimer:
I have successfully installed this modification in a MegaST (TOS 1.4, 6-chip set) and a later-model STFM (TOS 1.2, 2-chip set). I do not know if it will work with TOS 1.0.
I cannot accept any responsibility for any damage to your ST.

Wrong, in virtually every particular, sorry!

It comes with Kobbold, heres the Text file which explains things better
than I can.

Cheers,

Roy

==========

CHK_OFLS: Data protection for the GEMDOS filesystem
==========

Version 1.03
by Hans-Juergen Richstein
(c) 1994 KAKTUS GbR

Programs which access drives directly (by bypassing GEMDOS) have one basic
problem: if there were any open files during direct access, or GEMDOS and
these applications collide with each other while trying to access the
drive, data loss will be the (almost unavoidable) consequence. Both depend
on having exclusive access to the drive. Operating systems before MultiTOS
(i.e. those which don't have a built-in device locking mechanism) did not

allow programs like the Kobold highspeed file-copier and GEMDOS file-system to coexist in peace.

The AUTO-folder program 'CHK_OFLS.PRG' (CHecK Open FiLeS) solves this problem. It establishes a device-locking mechanism on any 16 bit Atari. For example, GEMDOS cannot access a drive while Kobold is operating on it. Also, when GEMDOS has open files on a drive, no program that supports CHK_OFLS will touch this drive directly. Kobold can still access the drive but switches automatically to the compatible (GEMDOS) mode. This is much slower (sorry) but does not interfere with GEMDOS.

As an additional feature, CHK_OFLS supports the XHDI-protocol which is implemented by most of the newer hard disk drivers. When CHK_OFLS and such a XHDI-driver are both installed, a removable storage device is automatically locked when GEMDOS has open files on one of the partitions of the inserted medium. This prevents you from accidently ejecting the medium (and thus risking data loss) while a program is accessing it.

CHK_OFLS is not required if your operating system has a built-in device locking mechanism (i.e. the function Dlock()) as is the case in MultiTOS. In all other cases we strongly recommend putting CHK_OFLS into the AUTO folder. The Kobold installation program does this automatically. It also informs you if you don't need CHK_OFLS because it recognizes any built-in device locking mechanism.

2736. Uploading homepage on Geocities

Newsgroup: comp.sys.atari.st

From: pconceic@hol.fr
Message-ID: <5m2fq6$46b$1@news3.isdnet.net>
Source record: 121982

Hello guys....

I get a free home page on Geocities but I'm unable
to upload my homepage by ftp.

I'm using Newsie with MintNet (PPPkit) and Gluestik.

Newsie doesn't display the directory where I am. When I send
something, it takes a very short time (too short to send some
thing).

I've also tried with aftp (displays the directory) and duftp but
both don't allow me to upload anything. Mg-ftp crashes when I
lauch it and just write on the screen "Stack overflow".

If any one here as reached to upload his homepage on Geocities
with an Atari Software, I'll be glad to get some advices...

Thanks.

Sheer Agony* ST/Ste/TT (1996) $20.00
*note: last commercial ST game made! also quite rare! Kind of a poor mans
Myst or 7th guest.

Paladin (1988) $5.00 good RPG
Captive (1990) $12.00 great RPG
Ishar 3 (1994) $15.00 best RPG!

Ultima 6 *sold*

*mediocre box condition, missing main instructions, just use another
version's instructions, same thing.

here's a few more:

(all with boxes, 90% with instructions)

Mr. Do! Run Run(1990) $12.00 Mr. Do! He runs.
Runs.
Viking Child(1990) $12.00 the Lynx classic
in a scarcer ST version
Ultima V(1989) nice cond! *sold*
still uncommon,and fun
Outlands(1989) $5.00 typical shooter
Dragons Lair 3(1992) $12.00 just what it
says,mediocre but rare
Space Ace 2(1992) $12.00 same as above
Gauntlet 3(1991) $10.00 strange game,
good collectors item
Ween(1992) $12.00 fun game, like
Monkey Island but I liked it more
Sleeping Gods Lie(1991) $10.00 a really poor mans
Doom/RPG
Street Fighter 2(1992) $15.00 looks great,
great animation,scarce
Atari Gemini CD (shareware etc.)(1993) $12.00 2872 programs and text
files, misc. shareware

More to come. Feel free to e-mail me with offers/inquiries etc. I have many
other original games with and without boxes, tell me what you want and what
you will be willing to offer.I have a huge collection, some duplicates, and
just want to get rid of about 50% of it or more.Too lazy to type it all up.

With PPPKIT by default pppd uses active negociation. Gary you should
verify you haven't a "passive" or "silent" statement in /etc/connect or
perhaps in /etc/ppp/options.

In passive mode pppd will wait for the other side to send ppp lcp
packets, in active mode it will itself start sending packets just after
the chatfile end. And send 20 packets every 3 seconds then complain for
timeout if there is no reply.

Bye! Bruno.

: s> wondering,because I could get a Falcon with no HD for a lot cheaper
: s> than with one.

Yep...
You'll have to bypass the supra SCSI host adapter however, or
better yet, get HD Driver, and use SCSI arbitration to hook both machines
to the drive at the same time :) You'll need a SCSI II cable that plugs
into the Falcon - then into the regular SCSI port on your hard disk case.
A good 2 to 4 foot (the shorter the better) SCSI - SCSI II cable is around
$20 USA (I'm guessing that'd be about 35 UKp.

You'll also need to make sure the supra host and the Falcon SCSI host are
set to different ID numbers (I'm not sure how to do this) if you daisy
chain all the machines together. Also, be sure to aviod writing to the
same partition with both machines at the same time. SCSI should be able
to handle simultanious writes to the same partition, but I wouldn't press
my luck until I'd throughly tested it on a well backed up partition.

Optionaly, you can take out the supra host adapter, and run a SCSI
to SCSI II cable to the Falcon.

But the internal include a PC SCSI card,which is totaly useless and
increase the cost...
By the way, ID 5 or 6 isn't a real trouble: you can change others units
ID, and use AHDIConf to force it to scan the units you want to use.

The same for me, I access the net at work on a PC with netscape or MSIE and
transfer everything on floppies to my ST at home.

I setup the PC with WinZip which is a fantastic little ZIP shareware utility
that can also be configured to accept LZH and ARC files. It also interfaces
perfectly with MSIE and Netscape, so that once it's installed you just click
on the lzh file and uncompress it directly to the floppy. This saves ST
computing time at home.

Winzip, as well as LHA.EXE (for lharc files) and PKUNPAK.EXE (for arc files)
can all be found on http://www.shareware.com/

Otherwise, click with the right mouse button and 'save link as...'

Sorry for the PC publicity ;-)

Nick

2748. Re: // ZIP Drive on ST or Falcon

Newsgroup: comp.sys.atari.st
Date: 1997-05-22 00:00:00 UTC
From: Uwe Seimet <us@ooc.de>
Message-ID: <3383FE14.57C1@ooc.de>
Source record: 122134

Wilfrid wrote:
>
> Is there any way to use a Parallel Iomega Zip Drive on a ATARI MEGA ST 4
> or Falcon 030 ?

No, no way at all. Use SCSI ZIPs, these run on any platform and are much
faster than parallel port ZIPs.

2749. FS old stuff, need mouse

Newsgroup: comp.sys.atari.st
Date: 1997-05-22 00:00:00 UTC
From: Dave Gostl <dbg01@gnofn.org>
Message-ID: <Pine.GSO.3.95.970522025551.7397C-100000@sparkie.gnofn.org>
Source record: 122135

Hi all. I have some items for sale or trade.

I'd like to trade the Ripper cart for a GOOD mouse. Beetle, or etc.
The rest of the stuff, make me an offer!

The Ultimate Ripper Cartridge-"Put power in your Cartridge Port". Rips
Graphics, Music, etc from programs. Lets you break into programs! Built in
Assembler/Disassembler and many many more features. Retails for $90. Will
sell for $40. ST, STe, Mega. NOT for Falcon.

Twist - Divides memory and allows switching applications.
I don't think this works on a STe.

the Informer multi-table database w/ presentation graphics in spreadsheet
format. This is 1987 software, but it runs fine on a Falcon. You will be
seeing .PI? pics, not GIFs.

Hyperlink multi-purpose Object/Database. Runs on ST -> Falcon.

Dave

This is a simple case of swapping two wires, but I can't remember which two :-(
If you have the pinout specification of both the Amiga mouse and Atari standard,
it might be possible to work it out from there.

Nope. I tried it just now, and Linux says it can't read the disk :-(
I'm pretty sure there is no physical difference between Acorn and Atari
drives, so in theory it should be possible to read data from Acorn disks.

Not such a good idea. It's pretty easy to change your address in the
from: field, so if you send huge files they bounce back in your face.
The best thing to do is ignore them. Or you could find out where they
live and beat them up, but I wouldn't recommend that, as they might be
bigger than you.

2756. STe accelerator

Newsgroup: comp.sys.atari.st
Date: 1997-05-22 00:00:00 UTC
From: patrick_delafon@mail.schneider.fr
Message-ID: <864310583.12183@dejanews.com>
Source record: 122142

I am looking for an processor accelerator for my STe.

I remember reading about a piece of hardware that would sit on top (or more probably replace) the 68000 of an STe, and replace it with a 68000 running at 25 MHz (it also had a cache, I believe). I think I remember that System Solutions in the UK sold it at one time.

Has any one got one for sale ? Or anything similar ? Or any information as to where I might get hold of one ?

Thanks for your help !

No way ! I certainly don't want to pay to be removed from a list that I
didn't ask to be on.

That reminds me of what cyberpromo and other spam factories are trying to do:
spam people's mailboxes and then make them pay to buy THEIR special software
to filter UCE.

There's a name for that: Racket.

I still have the following ATARI ST stuff:
If you want something, just name your price and we will see how we can get the stuff to your place.
I live in Belgium.
To give you an idea of the price: you can have the whole lot for:
4800 BFR (Belgium)
270 Fl (Holland)
160 $ (US)
95 £ (UK)
230 DM (Germany)
But you can always make an offer on seperate items.
Mind you: I don't want to make big money, I just want to get rid of the stuff without having to throw it away.

```
GAMES: all in original package, incl. manuals, disks, ...

GOLDRUNNER 2 (Microdeal)
GOLDRUNNER 2 SCENNERY DISK (Microdeal)
F-19 STEALTH FIGHTER (Microprose)
NIGHTRAIDER (Gremlin)
FALCON (Spectrum Hollobyte)

I was wondering if anyone had any info on the next release of PaCiFiST? Frederik has usually updated it about every 2 weeks. The latest update promised much more compatibiility! I am very eager to try it out! Dont get me wrong! I am not complaining that it is not done yet, or whining for Frederik to HURRY HURRY! I am just curious about a release date? Projected or otherwise.. Anyone with info? Frederik?

From: Tony Martin <lmartin@midamer.net>
Message-ID: <3384DEA1.1817@midamer.net>
Source record: 122159

Tltle says it all. I am looking for a working printer with the following specs.

Star Gemini NX-10
Star NX-1000
Star NX-1001
Epson FX-80
Epson Compatible of any kind that is 9-pin and has an NLQ mode. Will consider 24pin if cheap enough. I am willing to spend 25-30 dollars tops + shipping. I don't want someones junk please. It must work properly, have power supply and would like owners manual if possible. I have seen this type of printer available so I know they are out there at these prices. Please respond to lmartin@midamer.net

Thanks

Tony M

Source record: 122169

Hi Kemosabes,

The bottom line is STiK wins, hands down. This is not meant as a criticism of STinG or Peter Rottengatter. Dan Ackerman's STiK has gone through many versions, and now is the best SLIP connection for CAB. Remember the "Old Day's" with dozens of different conf's depending on which http server? STinG has many fine features, but online, STiK performs best. Ex:

http://www.axionet.com/excel/tos.htm
HTML code was strictly written to perform well with CAB(Neil Roughley). STiK, no problem. STinG, lots of problems.

Dan's STiK is about as "Rock Solid" as a SLIP connection can be. By reducing the number of parameters that need to be configured, most can easily setup STiK for a good connection.

STinG on the other hand needs to be "tweaked" depending on your http server. This is no small task. MTU, MSS, RCV_WND, etc. are all interdependant. Change one and the others misbehave. STiK is much more tolerate, esp. MTU (as MSS and others are auto set).

STiK advantages are:
1) Falcon/TT users may use Fast Serial, fewer Auto folder conflicts.
2) Stable at all Baud Rates
3) Fewer http server conflicts
4) Works better with all versions of CAB/CAB.OVL

Today, most servers configure Netscrape/Micro$oft IE for their users. Atarians don't have this luxury. Zenet in the UK may be an exception :)

I took a look at the FAQ of FreePPP for Mac users. They have their problems also. Fortunately, most servers can set it up/troubleshoot for them. Does anyone have WenSuite/PPP working properly? Seems simple to set up, right? I think you get my point.

Again, thanks to Dan and Peter for their efforts in improving the Atari TCP/IP platform for us users.

SLIPping in Seattle,

Charles

>lose :(

90% of the spam I get (and I get a lot) is from cyberpromo or earthlink. These are very well known spam factories who sell their services to ignorants who beleive in pyramid marketing, make-money-fast scams and miracle remedy products.

Complaining to cyberpromo (and their various domains savetrees.com, nancynet.com, etc...), earthlink or agis (their ISP) is totally useless as long as no legal action has been taken against them. These companies use illegal methods: the US fax advertisement law prohibits sending adverts to a fax machine which is defined in the act as a device used for transmitting text or images over a telephone line. They are also basing their profit on encourageing ignorant users into illegal activities: MMF scams are illegal per US postal regulations, and I'm quite sure that just about any of the miracle medicine scams I get are illegal too.

Of course all this still has to be tested in US court, so until then there's not much we can do.

I would also point out that although the Net is an international space, ALL of these spam come from the US. So as soon as this activity is regulated in the US you will see email spam virtually disappear. Spammers also regularly bypass any local regulations that might hold. For example, in France, where I live, it is illegal to maintain a database of names that is not accessible by any person who is on the list.

Maybe this discussion should be taken to news.net.abuse.email

<cyberpromo's reply clipped>

Nice test. Except that it's flawed. Did just the same, with the very same Web Page. STiK, no problem. STinG, no problem. Found STiK was about 3% faster, which could easily have been caused by network load fluctuations. What do we deduce ? Charles needs to do a little more setup work. My Setup was an 12 MHz 520ST, 14400er modem, HSMODEM7, STinG 1.0, CAB.OVL v1.25, CAB V2.0 (To be honest, I used a newer TCP.STX in which I fixed a couple of bugs, to go to my web page in a few days).

> Dan's STiK is about as "Rock Solid" as a SLIP connection can be. By reducing
> the number of parameters that need to be configured, most can easily setup
> STiK for a good connection.

Don't you think it's ridiculous to call it a rock solid SLIP connection. SLIP is a trivial thing to get in, you can't do much wrong. Nothing that would effect reliability nor speed.

The thing that does is TCP. I readily admit it's young, the tcp is not older than three months. Of course STiK's TCP is more stable right now. But I'm working on it, and it will catch up soon.

> STinG on the other hand needs to be "tweaked" depending on your http server.
> This is no small task. MTU, MSS, RCV_WND, etc. are all interdependant. Change

Depending on your http server ? How the hell should STinG depend on any http server ??? I got none on my machine at least, and I do not see how STinG (or STiK) would interact with my ISP's http server.

On the interdependancy. There is some, that right. I'd suggest to get a tiny bit of knowledge what they're good for, and it's easy to set them up. I'd bet when doing your "tweaking" you mostly observed network load fluctuations, and misinterpreted them as caused by your new "tweaking".

I intend to eventually have a chapter in the docs on these parameters.

> STiK advantages are:
> 1) Falcon/TT users may use Fast Serial, fewer Auto folder conflicts.

I just got told that there are users working with STinG and FastSerial.
Why should HSMODEM cause Auto folder conflicts ?

> 2) Stable at all Baud Rates

STinG is stable up to at least 57600 bps, as I got reported yesterday.

> 3) Fewer http server conflicts

See my test above. Though it's of course hard to quantify "fewer". But so
far I know no http server to which STiK would connect and STinG won't.

> 4) Works better with all versions of CAB/CAB.OVL

This point remains as the only one that is indeed right. Dan, however,
is just doing a cleanup with the aim, that nobody needs to rely on old
versions anymore.

Aah, SLIP in Seattle -- spoiled by Microsoft ? ;-)

I do not know how you can try to compare two stacks this way, one that is
several years old, and the other not even been released in a real release
version (a version I won't call beta). And if it's too hard for you to
deal with a couple of settings more than in STiK, well, your decision,
I can only note that there are many many people for whom it was not too
hard. And there is flexibility gained from those settings !

Cheers Peter

> Actually it is NOT free, You need to think about the concept a
>little, but it will come to you <smile>

I certainly don't need to think about it a little, I gave an exact quote from their LATEST advert in response to a request for information!

I know it's marketing bull, but that's how they advertise their service. Actually it is true in a way because like many ISP's when they originally started they only provided an email address and access to the 'net. They did not give you any web space free of charge, you had to pay for it. I have in front of me one of the original Zetnet price lists and web space of any kind is chargeable - no free space.

Some time later most ISPs started giving *free* web space of varying sizes to customers. Whether you view it as free or as a bit of added value to your existing agreement it doesn't really matter. I pay no more now than I would have a year ago, but I get something extra in the shape of 5 megs of web space.

Obviously, any clued-up ISP would be daft not to provide web space to customers nowadays whether they class it as a free extra or as part of the original deal.

It's all a question of marketing Tony, and at the end of the day I get 5 megs of web space which I CAN use to promote my commercial activities (which is not the case with many other ISPs), and I don't get charged any extra for this. Is it free?, is it an added extra?

I think you're being more than a bit picky on this point and probably interpreting the wording too narrowly :)

> Geocities give free web pages...so do a few other firms,

How do they differ then? Don't they charge for their service at all?

>but Zetnet,
>Demon my own ISP Airtime and many others do not :)

As I said before *free* is a marketing word, but everyone uses it.

I've just bought a garden shed today - it came with a free floor! How the heck you could sell a shed without a floor is beyond me, but that's the way it's marketed!

At the end of the day, whatever word twisting you or I or the marketing departments of ISP's come up with, I've got something extra which I am using, and I ain't paying anything extra for it!

That's what counts, and you can't argue with that!

Best wishes

Mike Kerslake

>all then please do ask :)

Unfortunately we couldn't get the details into AC#5. I eventually got all the artwork done and collated for the next issue this afternoon and it had to go immediately to the printers.

The delay in getting an alternative site up and running is down to the fact that the person responsible for the AC account is away during the week ATM, and the rest of us have been too busy getting AC#5 together to do any work on the site. Now that AC#5 production work is over, we may have a few days before the despatch of the magazine to get some work done on the pages.

Thanks for the offer of help, but I think we'll be okay now.

>>make sure they are posted here as soon as we are in a GO position.
>
> Good, we hear so little from AC in here,

Just to put the record straight, AC is put together by a very small group of people in their spare time. Joe Connor, Darryl Godsmark and myself (Mike K) do all of the editorial and production work between us. Al Goold and Brian Stanton do the administration and subscriptions. Finally Joe and I do the despatch of the magazines between us.

The other members of the ACG contribute by writing bits for the magazine, and lending a hand wherever possible. But at the end of the day the bulk of the work falls onto five people who ALL have full-time jobs and family commitments to fit in with.

There's no big office with hundreds of staff swanning round. It's a reasonably professional magazine put together by a group of Atari enthusiasts in their free time and exists as a service to the Atari scene. It's not a money-making machine and it doesn't have paid staff.

I'd like to post more often in csas, but if I did, I'd spend more time writing here than helping to get the magazine out the door!

Hopefully the revitalised web site will be a better provider of information in the future, and although it may not be the most graphically exciting, at least you will be able to get news and information from it easily, and it will be much more up-to-date than it is now!

As I promised in an earlier posting, once we can release the web site address I will post it here.

Best wishes

Mike Kerslake

Awards like this are a load of old bollocks!

They don't reflect the real world.

Some people get good service with Demon, I didn't, so I left. I get far
better service with Zetnet. That doesn't mean everyone else will!

If you get good service great, I didn't! :-)

>I know it's marketing bull, but that's how they advertise their service.

We all know its marketing bull, that why I wouldn't go around saying
something is free when its not...

>Actually it is true in a way because like many ISP's when they originally

In a way...but you know what I meant...you pay for it... the first
time you stop paying then they take away the web page.

>(which is not the case with many other ISPs), and I don't get charged any
>extra for this. Is it free?, is it an added extra?

its an added extra, not free IMHO :)

>I think you're being more than a bit picky on this point and probably
>interpreting the wording too narrowly :)

Ho dear..it was an off the cuff remark followed by an overly large
SMILE...I don't see how anyone can call me being picky on that

>> Geocities give free web pages...so do a few other firms,
>
>How do they differ then? Don't they charge for their service at all?

Not one single penny, two meg totally free. ..hence me saying its
free.... penny starting to drop? :)))) cybercity give you 5meg free,
and dont want one single payment of any sort..

>>but Zetnet,
>>Demon my own ISP Airtime and many others do not :)
>
>As I said before *free* is a marketing word, but everyone uses it.

Then you did know what I meant and didnt really need to call me
picky..

>At the end of the day, whatever word twisting you or I or the marketing

Actually I wasn't aware I was doing any word twisting, merely
remarking that paying a firm a fee for a service, aint free in my
book,

>departments of ISP's come up with, I've got something extra which I am
>using, and I ain't paying anything extra for it!
>That's what counts, and you can't argue with that!

Actualy i agree with your above statement and find it rather
insulting that you would presume I wouldn't?

Anyway, like I say, a simple comment from me on the subject of free,
hardly warranted your "picky", "word twisting" and "arguing" comments
did it?...How you found the above three in my one short comment is a
feat in itself?
Don't get so het up Mike...it's only ASCII :)

Yes AC5 seems to have come around pretty quick...for some reason I
thought it was a while off, thats good innit :) I mean getting AC5
done so quickly is good :)

>Thanks for the offer of help, but I think we'll be okay now.

OK no problem , anytime :)

>>>make sure they are posted here as soon as we are in a GO position.
>>
>> Good, we hear so little from AC in here,
>
>Just to put the record straight, AC is put together by a very small group

Yes we know... 90% of ATARIans are in the same boat..pulling together
for the ATARI community at no profit and very little thanks... But we
all slog on for the love of it don't we :)

>I'd like to post more often in csas, but if I did, I'd spend more time
>writing here than helping to get the magazine out the door!

Well we wouldn't want that would we:), I hope you didn't read
anything between the lines in my "we don't see much of AC in here"
comment, it was meant as a ...we miss you all type thing.. nothing
nasty ? you didn't think it was meant any other way did you...hope
not, that would be spooky :)

>Hopefully the revitalised web site will be a better provider of information
>in the future, and although it may not be the most graphically exciting, at

Actually, for my own personal opinion, I think sites can be too
graphic, people can see from my web pages that I dont hold with
graphics on the STOSSER site as I want it to be fast to load and easy
for CAB...yet still colourfull and pleasent I hope :)... I wouldnt
worry about it not being a graphical extravaganza, I would think most
people would welcome a less graphical site...I know I do :)

>least you will be able to get news and information from it easily, and it
>will be much more up-to-date than it is now!

Great :)

2798. Help: NVDI Postscript Module

Newsgroup: comp.sys.atari.st
Date: 1997-05-23 00:00:00 UTC
From: Frank Lockwood <lockwood@freenet.calgary.ab.ca>
Message-ID: <Pine.A32.3.93.970523183242.47952A-100000@srv1.freenet.calgary.ab.ca>
Source record: 121934

I recently purchased the Postscript Module for NVDI. I followed the installation instructions and installed the new version of NVDI.PRG to my auto folder successfully. Once done, I was able to load Postscript fonts into AtariWorks, but when clicked on "Print", I got 4 bombs and the computer (at TT030, running TOS 3.06) freezes.

I have tried running with nothing else active in my Auto folder and my .ACC stack, but I get the same results. Moreover, when I reboot, and try to print out of some other program that supposedly does not use the NVDI Gdos routines, i.e., Everest text editor, it too bombs and freezes.

Now my previous version of NVDI (without Postscript capability) was version 4.11, but once I install the replacement, it shows up as version 4.10. Is this the problem? Some sort of version conflict with the printer drivers or .CPXs? Or did I just get some defective software?

Thanks in advance.

Hello Yag,

b> only trouble is when you've got more than 40 folders imbricated(I think)
b> (like c:/folder1/folder2/folder3/.../folder39/folder40)
I think 9 folders is the maximum of DOS, TOS allows some more...

b> Anyway, a short programm called FOLDRXXX.PRG will increase the max
b> number of folder by XXX (eg: Foldr100.prg give you 40+100=140 folders
No. Some versions of TOS halt the system if you *open* more than 40 folders
(has nothing to do with the number of *existing* folders at all). With
FOLDRXXX.PRG this problem occurs just at a slightly higher number of *open*
folders...

Greetings, Oliver

Where do you want to go today? *I wanna go my own way!*

>Does anyone know of some software for an Atari that supports a PPP
>connection with no dial up scripts?

I suppose you mean PPP with PAP or CHAP? MiNTnet supports both (see
PPPKIT or KEMD distributions), NOS supports only PAP but doesn't allow web
browsing, and that's all I think. Future softwares like Sting, Stick,
Termite or WenSuite should support this too later.

Bye! Bruno.

Jonathan J. Hunt (csjjh@ux1) wrote:
:
: Hi,
: I just recently got WordPerfect 4.1 for my ST & love it. I've no
: problem loading a 4.1 ST doc into a PC at work with WP 5.1 but can not
: save in WP 5.1 and read the file back again at home on my ST.
: Arrrrrrgh! There's got to be a better way. Anyone know of a program
: that will translate WP 4.1 files back and forth to either WP 5.1 or Word
: format? I need help bad.
: Thanks for any suggestions you may have.
: Later,
: JJH
JJ-check to see if you have a choice in wordperfect atari files
menu-export? it will have a bunch of choices on exporting and wp4.1 for
dos is one of them. It will save in completely compatible dos 4.1
wordprocessor file. It will also import back into WPAtari-next you
should be able to import those files directly into WP 5.1 for dos. Now I
am prettu sure WP for dos can export as WP 4.1. Again you are looking
for either the command export? or Save as on the drop down file menu..
If you havent enabled drop down menus in WP 5.1 it makes all of this
easier. Now MS Word I am not too sure about but you should be able to
run the files through wp dos, and then export as WP 5.1 files and word
should read those directly. If none of this works I apologize, you may
not have the last upgrade issued to WP atari... It should be WP 4.2? i
think in august ? of 90 something...
good luck.

5-14-97 >>>>>> [][] ATARI Clearence SALE [][] <<<<<< 5-14-97

I have accumulated quite a bit of atari stuff! I didn't realize it was
that much until I moved into my new place, and found I didn't have room
:) So it's time to thin out the less used items.

Item : Complete System
Computer : Mega 4 w/ 4mb RAM and TOS 1.04
Monitors : Monochrome * AND * Color w/ Monitor master
Monitor Models : SM124 and Goldstar SC1224
Software : Over 100 original games (100's of disks?) plus misc.
Comments : utils. Also includes joysticks, a mouse and mouse pad
Comments : 2400 baud external modem and the mega4 has the original
box

Includes whatever programming manuals/software that I might have that
you want. In short, if you want more (asside from the Hard Drive) w/o
paying more, (FROM MISC AREA ONLY) I'll pry throw it in
(depending on what it is)

Asking : $300 + shipping

Item : Complete External Hard drive setup
Host Type : ICD Link
Megabytes : 139mb formated
Type Case : Plus Impulse flat case
approx size: 13(width) 2.5(height) 14.5(depth) (inches)
Comments : Includes DMA cable, Power cord, ICD software
Comments : Plug 'n Play - Autoboot w/ICD
Asking : $150 + shipping

If you want something from the Misc area, i'll pry throw it in -
depending on what it is.

[-][-][-][-][-][-][-][-][-][-][-][-] [-][-][-][-][-][-][-][-][-][-][-]
M I S C
[-][-][-][-][-][-][-][-][-][-][-][-] [-][-][-][-][-][-][-][-][-][-][-]

If you want something listed below - make me an offer!

Item : ATARI LAZER 'adapter' box. I can't remember what these are
called.
Comments: But they are the boxes that plug into the computer
and the lazer printer plugs into this box. Comes with the
Lazer printer cord. And 1 DMA cable (as it's built into the
box) This box also has a DMA pass-threw.

Item : 6 (?) MFM hard drive mechs.
Comments: I don't know what works, and what doesn't. They all did work
when I put them in the box, but I cannot test them at this
point.

Item : Blitz Cables
Comments: Allows you to backup your software fast and easy!

Item : ST Sound Digitizer
Comments: Made by Hippo, includes software and cartridge

Item : Video 1000-ST
Comments: Includes Cart and german (paper) docs. Screen rez enhancer (?)

Item : Video Key
Comments: Lets you hookup your atari to a TV

Item : Mouse Master
Comments: Lets you click over between a mouse and a joystick on 1 port
(usually 0)

Item : 1040 power supply
Comments: Needs plug put back on (which I still have)

Items : SwitchBack
Comments: Difficult to explain what this is. This lets you save anything
to RAM or a file. (Not the best explanation, but best I
can do)

Items : Video Master
Comments: Allows you to take color (?) snapshots from your VCR

If you have any questions, or your interested in one of the items
listed above, Email me! All funds must be in US Dollars. I will ship
ANYWHERE.

All Video Game Advantage (VGA) FS/T lists are updated weekly and are
available on the WWW at http://www.io.com/~vga2000/

This list was last updated on 05/23/97

I have the following Atari ST software for sale or trade.

Unless specified, all items are *NEW* and are still shrinkwrapped.

SOFTWARE:

ATARI ST COMPUTER:

New diskette(s) [still shrinkwrapped!]:
$ 6.00 Arkanoid (Taito)
$ 6.00 Art & Film Director (Epyx) -- $4 shipping, due to weight,
counts as 1st item
$ 5.00 Battleship (Epyx)
$ 3.00 Bobo (Infogrames / Terrific Software)
$ 5.00 California Games (Epyx)
$ 5.00 Championship Wrestling (Epyx)
$ 3.00 Crash Garrett (Metal Hurlant)
$ 5.00 Death Sword (Epyx)
$ 4.00 Devon Aire (Epyx)
$ 4.00 Dive Bomber (U.S. Gold / Epyx)
$ 3.00 Dragon Scape (Free Spirit)
$ 4.00 Final Assault (Epyx)
$ 5.00 GFL Football (Gamestar)
$ 4.00 Golden Path (Firebird)
$ 4.00 Goldrunner II (MicroDeal)
$ 5.00 Impossible Mission 2 (Epyx)
$ 5.00 Karateka (Br0derbund)
$ 4.00 Knight Orc (Rainbird)
$ 5.00 L.E.D. Storm (Capcom)
$ 4.00 Lands of Havoc (Antic Software)
$ 5.00 Last Duel (Capcom)
$ 5.00 Man Hunter: New York (Sierra)
$ 3.00 Mean 18 Famous Course Disk Volume II (Accolade)
$ 5.00 Metro Cross (U.S. Gold / Epyx)
$ 5.00 Paint Pro (Abacus Software)
$ 4.00 Prime TIme (First Row)
$ 5.00 Quadralien (Spinnaker)
$ 5.00 Renegade (Taito)
$ 5.00 Space Quest: Chapter I (Sierra)
$ 4.00 Star Quake (Terrific Software)

$ 4.00 Star Ray (Logotron)
$ 7.00 Star Wars (Br0derbund)
$ 4.00 Stunt Track Racer (Microplay)
$ 4.00 SwiftaR (Accustar)
$ 5.00 Techno Cop (U.S. Gold / Epyx)
$ 5.00 The Advanced OCP Art Studio (Rainbird)
$ 5.00 The Games (Epyx)
$ 4.00 The Pawn (Rainbird)
$ 4.00 The Sentry (Firebird)
$ 6.00 Tower Toppler (U.S. Gold / Epyx)
$ 6.00 Warship (Strategic Simulations, Inc.)
$ 5.00 Winter Games (Epyx)
$ 5.00 World Games (Epyx)
$ 5.00 World Karate Championship (Epyx)
$ 4.00 Zero Gravity (MicroDeal)
$ 4.00 Zynaps (Hewson)

*****

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3 for the first game and $1.25 for each additional game, unless otherwise listed. If you order enough items I can weigh the order as a package, which might reduce the shipping costs. Foreign orders welcome.

Large orders will be weighed as a package, to reduce shipping costs.

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember
that nobody is forcing you to buy from me. I have been in
business since 09/05/93, so I have a good idea how to price
items. My personal philosophy is that something is only worth
what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money
order, drawn from a U.S. bank branch. Orders from outside the
U.S. are also accepted (also, please check out my want lists,
since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to
correct mistakes made while typing this message.

*****

To reserve any item(s) listed here, please do the following:

1) carefully read the SALES CONDITIONS section first,
2) send me a list of the items that you are interested in,
3) include your full postal mailing address (this information is
for internal VGA use only)!
4) I will reply with a shipping information message for your order.

Thank you!

> STiK, no problem. STinG, lots of problems.
>
That is a good point to start the debate from. Stik has had many versions and
still a lot of people can't get it to work ! I do remember the good old days
of having to tweak STIK without any help from the STIK crew I might add. It's
a bit early concidering this is the first version of STING to compare it to
STIK but it does have a lot of potential and don't forget it's another option.
>Dan's STiK is about as "Rock Solid" as a SLIP connection can be. By reducing
>the number of parameters that need to be configured, most can easily setup
>STiK for a good connection.
>
>STinG on the other hand needs to be "tweaked" depending on your http server.
>This is no small task. MTU, MSS, RCV_WND, etc. are all interdependant. Change
>one and the others misbehave. STiK is much more tolerate, esp. MTU (as MSS
>and others are auto set).
>
When was the last time you looked at your Dial.Scr and Default file in Stik as
this is still needed ? All I did was transport my settings from one to the
other with no difficulties whatsoever.
>STiK advantages are:
> 1) Falcon/TT users may use Fast Serial, fewer Auto folder conflicts.
> 2) Stable at all Baud Rates
> 3) Fewer http server conflicts
> 4) Works better with all versions of CAB/CAB.OVL
>
I hate to inform you but it's been a hell of a long time since I and a lot of
others have swithched to HSMODEM7 and this is stable without a doubt on all
Baud rates. The only diffence I found was I can't use Control K to speed up
slow servers such as Axionet. This is something that needs to be looked at .
>Today, most servers configure Netscrape/Micro$oft IE for their users.
>Atarians don't have this luxury. Zenet in the UK may be an exception :)
>
I believe we are not that far off now from having a set-up that ISP's can

offer their clients such as for PC's and Mac's !
>I took a look at the FAQ of FreePPP for Mac users. They have their problems
>also. Fortunately, most servers can set it up/troubleshoot for them.
>Does anyone have WenSuite/PPP working properly? Seems simple to set up,
>right? I think you get my point.
>
It connects with a PPP protocol without any problems but until we can see it
working the way a Browser was meant to work ie: full colour and not text base
then WenSuite will go nowhere .
>Again, thanks to Dan and Peter for their efforts in improving the Atari
>TCP/IP platform for us users.
>
I agree completly here but we must also thank the other programmers without
whose work most of this conversation couldn't take place.
Oasis,Cab,Stik,Mintnet,Duftp,Newsie,Aftp,Sting,Mgftp... Another thing to keep
in mind is the fact that most of these programs were created within the last
two years . Quite a feat in itself that deserves the thanks and support
whether it's in monetary or just a simple e-mail to cheer up the programmers

2805. Folder Limit ???

Newsgroup: comp.sys.atari.st
Date: 1997-05-23 00:00:00 UTC
From: psloth@post2.tele.dk
Message-ID: <33852c78.299395@news.uni-c.dk>
Source record: 121990

Is there a limit to how many folders there can be on a disk ??
My system is Falcon 030 - part. size is 524 MB.
Thank !!!!

2806. 32 Mhz Falcon 030 for Sale in UK

Newsgroup: comp.sys.atari.st
Date: 1997-05-23 00:00:00 UTC
From: adrian southan <adrian@imtoosexy.com>
Message-ID: <3385BAE3.5299@imtoosexy.com>
Source record: 121991

I live in the West Midlands - England
and have an Atari Falcon for sale,
4 meg of ram,
65 meg Hard disk,
32Mhz upgrade
external Sporster 14400 modem
plus a VGA cable & a lot of software

The DSP chip is faulty (it doesn't work most of the time - a loose
connection?)

Please email offers.

Also a 520ST (1 meg ram) & external floppy drive is for sale, any
offers?

Nick (Nick@aspects.net) wrote:
: Does anyone know of some software for an Atari that supports a PPP
: connection with no dial up scripts?

I am unsure what you mean by "no dial up scripts." All PPP software will need to be configured in some way before it can work, and unless your ISP supports PAP or CHAP, then this will include a "chat script", which tells the software how to talk to your ISP to log in and start the PPP connection.

Or are you saying that you don't have a dialup connection, but instead a permanent connection of some sort? In this case the hardware required would vary depending on the type of connection, and MiNTNet would probably be the most likely option for software at present.

MiNTNet currently supports PPP, and contrary to popular opinion you do not need a separate hard disc partition to use it or anything of this sort. The "PPP-Kit" may be a good place to start with MiNTNet, since it contains only the essentials for PPP internet access and is thus quite small and easy for a beginner to set up.

Apparently PPP support for STiK is in the works, and I believe the newer STinG supports PPP also, although I have not used this myself.

There is no known problems about how many folders are in the disk. The
only trouble is when you've got more than 40 folders imbricated(I think)
(like c:/folder1/folder2/folder3/.../folder39/folder40)
It was serious on old STs, but I didn't check my falcon for this.
Anyway, a short programm called FOLDRXXX.PRG will increase the max
number of folder by XXX (eg: Foldr100.prg give you 40+100=140 folders
max... More than enough!)

wrote:

>Hello guys....

Hello :)

>I get a free home page on Geocities but I'm unable

>Newsie doesn't display the directory where I am. When I send

That is normal..I have a geocities and use ftp (Not ATARI) but can
tell you that you are not supposed to see your own directory,
Anything you upload will take around ten minutes before it actualy
appears on your web page,

To change, delete, rename etc files that are in your directory, you
should go to the geocities file manager, where you will be prompted
for password etc, there you get a directory and all the commands as
listed above.. but not upload,

>something, it takes a very short time (too short to send some
>thing).

Yes..this happens on any machine, you have to keep trying and in fact
you can be there a long time until it kicks in and actualy copies it,
Sometimes it is better to log off and go back later,

Although I am not using my ATARI to access the web (used to) your
problems as described are exactly the same as here on my PC <spit>

>I've also tried with aftp (displays the directory) and duftp but

I think you are already doing everything right..the fault is with a
very very busy geocities,

The optimum way to use geocities is with Netscape as you can upload
directly to your page and see the dirtectory, but Netscape is the Only
software available that can do this..

People will now ask why bother with all this hassle.. well its 2 meg,
and its totally free, and as most mail boxes offer multiple emails.. I
have 5 seperate emails for the rest of my family.. I can freely get a
total of ten meg free web space,

BTW theres another called CYBERCITY in Japan that give you 5meg free,
5 mailboxes gets you 25 meg, like your own little ftp site :)))) but
its slower than geocities, I mention it because you can see the
directory with an ATARI so is possibly easier to use.. but personally

the speed made it unviable for me,

HTH:)

BTW2..To find free web pages on the Internet..simply enter the word
FREE in your search engine, you will be suprised to find there are
quite a few:)...as well as other stuff and a bit of rip off stuff :)

>of having to tweak STIK without any help from the STIK crew I might add. It's

Sorry but I do not understand your comments "having to tweak STIK
without any help from the STIK crew", I got Stik when it first arrived
and could not make any sense of any of the cfg or any other part of
it, I wrote to steve the original Stik author in Australia, he made me
up new cfg files etc with all the information I had given him, and
from then on I never had any trouble with Stik, and that was the
original version! no troubles at all :)

If that aint help then?...Sorry but it was your "having to" comment,
it made the original author of stik sound unhelpfull to anyone
reading, when in fact he was 100% helpfull :) Unfortunatly he lost his
internet access not long after releasing the original stik (thats
terrible making such a breakthrough then losing your own access) but
by then Flinny was well into it :)))
I think Flinny must be older than my gran :))

I've heard of people who have already done it, so I guess it is possible, but
you will only get ST High resolution.

As for a VGA connector pinout, that should be quite easy to find. Have you
tried searching for "VGA" and "pinout" on Yahoo or Altavista ???

Seconded. savetrees.com is another name for cyberpromo. Don't bother sending them abuse reports as they will just add your address to their email list. IMO cyberpromo should be closed down as they just spam spam spam...

If you have access to a UNIX system, you can try "whois savetrees.com" to get the registered info (this works for lots of spammers).

Some ISPs are now filtering mail from the spam domains (eg.
cyberpromo). Perhaps it's worth asking your ISP if they will block
mail from these domains for all subscribers. After all, the people at
the ISP will be getting just as much, if not more, spam than you do.

Well, the "physical" limit will be 32766 folders (not including the root
directory), as each folder occupies one cluster, and the maximum number
of clusters you can have on a standard TOS partition is 32766. Of course,
you'll /only/ have folders on your disk, in that case ;)

Ciao

I think there was a type-o there. It is version 1.70H, as typed in the
subject line, not version 1.47H. These files (there is and English
version and aFrench version) are also now available for download at
ftp://128.120.234.42

Not quite right - as I recall, that bug is not to do with
folders within folders, but is to do with the amount of folders
you can open in one session before everything goes pear-shaped.
Some sort of memory de-allocation bug as I remember, and
FOLDRXXX just adds more buffers. This bug was never a problem
with floppies but could rear its head for hard disk users
especially after a long session.

It's simple really, just stick with the Atari, Amigo or whatever, and don't buy a machine that runs MS stuff on it. I haven't and I won't as long as my Ataris still keep on running or are repairable!

Keep the faith!

Bets wishes

>by Internet mag this month, and came 2nd at the Internet World conference
>awards this year.

It's the old story, some services and programs are better for some people than they are for others. I have had virtually no problems (and none as severe as I experienced with Demon) with Zetnet.

As I stress to people, I don't recommend any company or service, I just give a personal impression based on my own experience. I can't get certain programs to work on my Atari system, yet others have no hassle. Then again, I've got Newsie doing everything perfectly here on Zetnet, yet others are having problems!

That's the way it is :-)

If anyone finds a good service, stick with it. I just found Demon to be very poor at both service and support when I needed it. Others no doubt receive a good service!

Award thingies are a load of bollocks really, they are not an accurate reflection of the real world. I dismiss them completely whether they be program awards, film awards, brown-nosing awards etc etc!!!

Best wishes

>too.

Nope, the Norwegian supply was despatched on the 5 April. The New Zealand supply didn't go until 6 May because we were awaiting the order. All Norwegian readers who subscribe through their local distributor should have received AC#4 at least three or even four weeks ago. I have advised Hallvard to contact his local distributor to find out if his copy was despatched to him. It's quite possible that it has gone missing in the local post.

I therefore advise anyone who doesn't receive a copy of the magazine to check the following:

A) Did you renew your subscription - you wouldn't believe the amount of people that contact us saying that they haven't got the latest mag. After various long and expensive phone calls we discover that the person hasn't renewed their subscription! You don't renew, we can't deliver a magazine!

B) If you have definitely renewed, check with your bank to see if your payment has been cashed. If so, then please contact the person/distributor who you sent the payment to. They will then be able to sort the matter out as soon as possible.

If you have any query at all, PLEASE don't post them in this newsgroup. We have a proper email address, and we do answer all enquiries received at this email address. You can also write to us at the snailmail address given in the magazine under subscriptions, but please give us as much info as possible.

We want to sort out any problems as quickly as possible, but posting them in this newsgroup is unfair on other users and it's very likely that we will miss the problem. We simply don't have the resources to monitor this group daily. It was by pure chance that I happened to see Hallvard's posting. A simple email to our address or to his local distributor would have brought a much faster response.

Best wishes

Mike Kerslake

Message-ID: <01bc67f9$b24c6540$57880fcf@chesster.pcl.net>
Source record: 121937

Hello. I bought an Atari 1040STf unit from a thrift store, but did not know that I needed something other than a composite monitor for it. When turned on, the light on the unit comes on and the disk drive spins and the disk drive light comes on. Other than that, it is untested, since I have no monitor for it. One keycap is missing from the numeric keypad. Price is $5, plus actual shipping cost (1st Class or 3rd Class).

If interested, please e-mail me at chesster@pcl.net.

Thank you,
Jason Whorton

> wrong?

For each TOS version, HDDRIVER checks the partition parameters against
the TOS limits. So obviously you have a partition with parameters that
are not TOS compatible, i. e. your data wouldn't be safe on this
partition. Probably the software you used for partitioning did something
wrong.
The maximum partition sizes for each TOS version and the parameters you
have to choose when partitioning are listed when you click on "Help" in
the partitioning dialog box of HDDRUTIL. (This button is available with
HDDRIVER 6.2 and newer.) Basically the recommended limit for TOS 4.x is
1 GByte per partition, 2 GByte seem to be possible but this is
undocumented.

If your drive was partitioned on a PC or with the DOS compatibility
option with HDDRUTIL (->HDDRIVER) on the Atari and if you run HDDRIVER 6
you can use it with the Atari and the PC. For DOS compatible partitions
< 32 MByte HuSHI will also work. And for most partition types CBHD will
work, too.
In any case on the Atari Big-DOS (acp5.chemie.uni-kl.de/pub/atari/) or
MagiC 5 is required. Without one of these programs there is no way to
read/write DOS compatible partitions > 32 MByte.
DOS compatible partitions are the only way for a data exchange because
with appropriate software (see above) the Atari can use DOS compatible
partitions with a capacity of 2 GByte per partition. TOS compatible
partitions won't work for a data exchange because PCs won't recognize
these partitions.

AFRIR is agree with you.

I seem to recall IBM offered both CPM/86 (with a GEM front end) and MS-
DOS, and, I don't know why, pushed DOS. Anyway it's history.

You may be right on the contract point. However, IBM never tied down
either Microsoft or Intel, enabling both to license their product to
others (unlike Apple with their OS). This is seen as a classic mistake
by IBM.

Similarly, from the opposite end of the same telescope, MBA trainers see
Apple not licensing their OS as a mistake putting them in a minor player
league.

The points are debatable.

[Big Snippety]

Bloody Hell, I wish I hadn't asked now !
I didn't mean for that to start :)

Please, can anyone (Mike ?) give me an Email address or phone no. for Zetnet
so's I can ask them about their service ?
I really am having trouble with Demon, and would like to try Zetnet out.
For instance, I cannot connect to ANY Web pages held on Demon - including my
own :\ I just get stuck at the first 'receiving data'.
906f other pages are fine, so it's not my CAB/STiK setup.

Thanks.

OK, as you were ... ;)

See Yas,

Paz.

Thanks. But I still have to see a Falcon where I could not get it to work.
I do not have access to any 1040 STE, but I got several reports meanwhile
that STinG does work on those too. Must be something wrong with the setup.
Please elaborate on symptoms.

Cheers Peter

Yes. You're saying not even the modem send LED flickers if you try
to ping your nameserver, say ? Does ping to 127.0.0.1 work ? Did you
enter 'Modem 2' into the ROUTE.TAB file ? Do you have HSMODEM installed ?

Use TCP/IP. On the Linux PC, use slattach, ifconfig, and route to setup
the COM port you're using as a SLIP device. Then use STinG or STiK on
the Atari to provide TCP/IP on this end of the connection. If you go
Internet with the PC, you can access the Internet from your Atari too.

Cheers Peter

I've got mine installed for about a week now, and I'm quite pleased with it. No more SCSI problems. Faster processing (particularly of samples and graphics files). The ability to do 640x480 TrueColour. What more could anyone want? :)

I am having problems in 24/48 mode with flickering pixels on my SVGA monitor, even with the RGB Sync fix in place (albeit not as bad as before the modification) - I think this is the excuse I need to get a 17" monitor, preferably a nice Sony. And in the same mode, problems with printing (though that problem disappears when I shift to 20/40 mode).

Still, it's a great mod, and I don't hesitate recommending it to any Falcon user.

Hi everyone.

It's been a while since I've chatted with other Atari users. Where have all the die-hard Atari users gone? Write me, I lost track of many of you.

We.. the time has finally come for me to clean house. After nearly 10 years of being an avid Atari user, it's time to call it quits. The wife has my house loaded with IBM stuff, the boss wants me to quit trying to talk him into using Atari to do office publishing and other whatnot, and the kids are not interested.

I really hated lto pack everything up. Lots of great memories of past Atari shows and meeting are in these boxes. But I had always said that when my Atari couldn't do what the IBM did, I would pack it up. Well, I can't get on the WEB very well with my Atari, lIBM is finally ijmpressing me with some low cost desktop publishing software, and the hardware is cheap. And it keeps the kids quiet playing some pretty good games (cheaper then what Atari sold them for). That always did choke me up, how IBM would always sell their software 25% higher then Atari stuff, and people still bought it.

Anyway, the time has come to clean house, and I have a garage fill of Atari hardware and software lto get rid of. I fon't have a clue what sort of interest there is in use Atari stuff now, but lets give it a try.

The list of stuff is just too long to go into. I have about a dozen computers, ranging form the original Atari 800 tank to a few Atari 1040's upgraded with excellators and memory upgrades. Hundreds of software programs, thousands of shareware, bags of books and magazines, and many hard to find collector items (how about a silk Atari banner used at past trade shows?). For you real addicted Atari fans I have a belt buckle laying around.

Let me know what it is you are trying to find and I may have it. I want to get rid of this stuff by summer, and might even consider giving stuff away if necessary. I have lots of spare parts also. I have 4 milk crates of power supplies and cables alone. So let me know what you are looking for.

Jerry Cross

2858. Atari ST Games on the net.

>v1.25, CAB V2.0 (To be honest, I used a newer TCP.STX in which I fixed a
>couple of bugs, to go to my web page in a few days).

Hallo Peter,

Well, I'm not sure it's flawed. I didn't test the Web page with my 1040ST. My
set up was Falcon030/TOS4.04/28.8k modem/HSModa7/STinG/CABv1.5/2.0a/OVL1.25/
VGA 640*480*16/256. Lots of testing as you can see. I'll be glad to try your
new TCP.STX when it's available.

>> Dan's STiK is about as "Rock Solid" as a SLIP connection can be. By reducing
>> the number of parameters that need to be configured, most can easily setup
>> STiK for a good connection.

>Don't you think it's ridiculous to call it a rock solid SLIP connection.
>SLIP is a trivial thing to get in, you can't do much wrong. Nothing that
>would effect reliability nor speed.

Hmmm, overstatement? Maybe. Well, I should have said no crashes, bombs, time
outs, or lockups caused by STiK. Reliability nor speed? There is a difference
here between STiK/STinG, at least for me. It may have nothing to do with the
SLIP connection per se, but with CAB/OVL/STinG/ combo. It "appears" to be
connected to default.cfg parameters, however. One thing for sure. I wish you
had a Falcon to play with <g>.

>The thing that does is TCP. I readily admit it's young, the tcp is not
>older than three months. Of course STiK's TCP is more stable right now.
>But I'm working on it, and it will catch up soon.

That would be appreciated, danke. I did see a comment from Steffen Jahn
(Germany) about TCP and MTU:

There is a "Path MTU Discovery" (RFC 1191) to determine the optimum
maximum packet size for a connection. Most(?)TCP implementations use it.

>> STinG on the other hand needs to be "tweaked" depending on your http server.
>> This is no small task. MTU, MSS, RCV_WND, etc. are all interdependant. Change
>> one and the others misbehave. STiK is much more tolerate, esp. MTU (as MSS
>> and others are auto set).

>Depending on your http server ? How the hell should STinG depend on any
>http server ??? I got none on my machine at least, and I do not see how
>STinG (or STiK) would interact with my ISP's http server.

I was thinking of the HTTP1.0 Error 406 "No acceptable objects were found"
But that's another problem independant of STiK/STinG. I should have just
said ISP ;)

>On the interdependancy. There is some, that right. I'd suggest to get a
>tiny bit of knowledge what they're good for, and it's easy to set them
>up. I'd bet when doing your "tweaking" you mostly observed network load
>fluctuations, and misinterpreted them as caused by your new "tweaking".

One thing I'm 100% sure of is none of this has anything to do with any
network load fluctuations.

>I intend to eventually have a chapter in the docs on these parameters.

That would be very helpful.

>> STiK advantages are:
>> 1) Falcon/TT users may use Fast Serial, fewer Auto folder conflicts.

>I just got told that there are users working with STinG and FastSerial.
>Why should HSMODEM cause Auto folder conflicts ?

STinG and FS, great. FS survives warm re-boots without disconnecting the
modem, comes with a good CPX. Auto conflicts have to do with NVDI, HSModa7,
STinG, and AES4.1. Originally, I just substituted FS and STiK for HS_7 and
STinG. It didn't work until I sorted out the correct order and removed
AES4.1. STiK/FS/NVDI/AES4.1 wasn't a problem.

>> 2) Stable at all Baud Rates

>STinG is stable up to at least 57600 bps, as I got reported yesterday.

Ah, not for me yet, thus all the tweaking.

>> 3) Fewer http server conflicts

>See my test above. Though it's of course hard to quantify "fewer". But so
>far I know no http server to which STiK would connect and STinG won't.

Again, I should have written ISP. Just like a physicist to quantify
"fewer" <just humor, g>. Connecting isn't the problem. See above.

>> 4) Works better with all versions of CAB/CAB.OVL

>This point remains as the only one that is indeed right. Dan, however,
>is just doing a cleanup with the aim, that nobody needs to rely on old
>versions anymore.

That's more good news :)

<snip>
>> Again, thanks to Dan and Peter for their efforts in improving the Atari
>> TCP/IP platform for us users.

>> SLIPping in Seattle,

>Aah, SLIP in Seattle -- spoiled by Microsoft ? ;-)

I may be one of the few people in Seattle that doesn't own any MS products.
Many believe the Internet explosion has hurt the Atari platform more than
any other phenomenon. It centainly did here, as the Atari SPACE club has had
most of its members switch to PC's :(Big business for Darek's emulators.

>I do not know how you can try to compare two stacks this way, one that is
>several years old, and the other not even been released in a real release
>version (a version I won't call beta). And if it's too hard for you to
>deal with a couple of settings more than in STiK, well, your decision,
>I can only note that there are many many people for whom it was not too
>hard. And there is flexibility gained from those settings !

I'll let you have the last word without comment as I have bored everyone
reading this already. As I am also replying to a post by Rick Martin,
I'm sure I've said enough/too much ;) Danke for your continuing efforts.

Auf Weidersehen,

Charles

P.S. I'm having to get these posts from DejaNews as my ISP's NG link has
down for 2-3 days. Sorry for breaking the thread.

>STIK but it does have a lot of potential and don't forget it's another option.

Well, I like the idea of another option. I just wish I could get STinG to work
as well as STiK on my Falcon at 57.6k baud connection. We'll see. I did mention
that STiK has gone through many versions and STinG was 1.0.
<snip>
>>STinG on the other hand needs to be "tweaked" depending on your http server.

>other with no difficulties whatsoever.

Rick, you must live right<g>. I tried that also, but STinG was slo-o-w. Thus
all the tweaking.

>>STiK advantages are:

>> 1) Falcon/TT users may use Fast Serial, fewer Auto folder conflicts.
>> 2) Stable at all Baud Rates
>> 3) Fewer http server conflicts
>> 4) Works better with all versions of CAB/CAB.OVL

>Baud rates. The only diffence I found was I can't use Control K to speed up
>slow servers such as Axionet. This is something that needs to be looked at .

Well, I won't go into a HSModa07 vs Fast Serial, but for the Falcon, I prefer
Fast Serial/CPX. I will mention this; FS survives warm re-boots which comes
in handy when "tweaking" TCP/IP stacks or anything else.

>>Today, most servers configure Netscrape/Micro$oft IE for their users.
>>Atarians don't have this luxury. Zenet in the UK may be an exception :)

2867. Hades or Falcon ?

Newsgroup: comp.sys.atari.st
Date: 1997-05-24 00:00:00 UTC
From: augeas@elis.demon.co.uk
Message-ID: <95530032_000034_OASIS_NEWS@elis.demon.co.uk>
Source record: 121963

Hello.

I'm looking to upgrade from my STFM soon. I can just about manage a Hades 040, but I'm still inclined to go for a Falcon in a rack case. What I want is more memory and HD space, decent video modes and a stab at running Linnux. I think I'd miss the DSP if I had a Hades, and the new version of TOS is relatively untested. What do you think ?

2868. Complete ST system for sale

Newsgroup: comp.sys.atari.st
Date: 1997-05-24 00:00:00 UTC
From: Devin Balkcom <76231.356@CompuServe.COM>
Message-ID: <5m7049$834$1@mhafc.production.compuserve.com>
Source record: 121964

I'm sure that this is probably not the right place to post this,
and I apologize for posting a 'for sale' message in the
discussion group, but unfortunately my newsgroup provider does
not get the 'comp.sys.atari.forsale' or equivalent newsgroup.
I've got a great system which I will be sorry to lose. I'm
asking $100 + s&h for the whole deal. Here's what I have:

Mega 2 ST with TOS 1.4
(double sided disk drive)
52 meg hard drive
320x200 original color monitor (with speaker)
640x400 monochrome monitor (no speak, unfortunately)
'Monitor master' hardware for easy switching between monitors
Panasonic kxp1080 9-pin dot matrix printer

Massive software collection:

(This is only a very partial list to give you some idea)
90% of the software has original boxes, manuals

Applications:
LDW Power spreadsheet
Atari Works (Spreadsheet, Word Proc, Data base)
(includes Speedo GDOS 5.0 upgrade)
dBase III database

2869. TTf Fonts to Bitmap

Newsgroup: comp.sys.atari.st
Date: 1997-05-25 00:00:00 UTC
From: tparrett@parrett.fast.co.za
Message-ID: <864580812_OASIS_@parrett.fast.co.za>
Source record: 121778

I've been trying out a few TTF fonts (under NVDI 4) without too much difficulty. I have found one that I would like to use in my printouts from Emagic Logic (v2.5) Unfortunately Logic uses Bitmap fonts which it scales to the required size. It obviously has its own version of GDOS within the prg as GDOS is not required when loading logic. Is there a Font conversion prg that will enable me to convert TTP fonts into Bitmap fonts ?.

From: s1383700@uottawa.ca
Message-ID: <5m9ttd$96q$1@cybernews.cyberus.ca>
Source record: 121779

I'm using a HP-UX with a RISC processor and I would like to install STonX. The only problem is that it requires gcc to compile. We don't have it installed so I was wondering if someone has a compiled version that would work on my machine. If so please contact me or send to me by E-Mail.

BTW: I tried the binaries located on the official site but my machine didn't want to execute them, and yes the TOS image was in the same directory as the executable.

This would be greatly appreciated.

2871. Help - Selecting Fonts in QED

Global Commander ..... $ 5.00

2874. Newbie ST help

Newsgroup: comp.sys.atari.st
Date: 1997-05-25 00:00:00 UTC
From: vhunterd@geocities.com
Message-ID: <vhunterd-2505971324210001@lanrover2-line6.uoregon.edu>
Source record: 121783

Hey, I just got the MagicMac software for my macintosh so I could play all my great ST games again. I've got a problem though, All my stuff is in .msa files, and recently I've been dl'ing demos off various websites that are in .st format. I got a utility that supposedly writes .msa's to floppies but for some reason, when it gets to the last block of the disk, it says the whole thing is corrupt. Is this a problem with my mac, or is it MagicMac not fully emulating the ST floppy drive? Formatting disks within MagiC also fails at the very end. The best way I've found to use floppies is by formatting my disks as PC disks in MacOS and then popping into magicmac and using the disks there, but this doesn't work for the .msa and .st utilities I have. Anyone have any ideas or pointers that would allow me to mount .msa and .st files on MagiC's desktop, much like 'shrinkwrap' in macos? Thanks,

Joe Duerr

Oh come on...

>>At the end of the day, whatever word twisting you or I or the marketing
>
> Actually I wasn't aware I was doing any word twisting, merely
>remarking that paying a firm a fee for a service, aint free in my
>book,

I see your point, but I often deal with firms that give me free gifts because I am regular customer. It's not because it's built into the costing of all their deals. Usually they are merchandise samples or promotional items given to the firm, but they often have some spare or unwanted items and they give them to regular customers. I count these as free, not as *added extras*!

>>departments of ISP's come up with, I've got something extra which I am
>>using, and I ain't paying anything extra for it!
>>That's what counts, and you can't argue with that!
>
> Actualy i agree with your above statement and find it rather
>insulting that you would presume I wouldn't?

The YOU above was used in the usual general context it is used in, not at all aimed at you personally. You reckon I get het up, I sense that you have! I sat here with a wry smile on my face when I commented on your original points - honest :-)

> Anyway, like I say, a simple comment from me on the subject of free,
>hardly warranted your "picky", "word twisting" and "arguing" comments
>did it?...How you found the above three in my one short comment is a
>feat in itself?

Got a reaction didn't it ;-)

> Don't get so het up Mike...it's only ASCII :)

I enjoy discussing things in a robust manner. If you think I'm bad you should attend an ACG meeting with Joe Connor! :-)

Anyway, sorry if I've bruised you, I didn't mean to.

Best wishes

Mike Kerslake

No problem. The phone number is 01595 696667

Email is: info@zetnet.net

http://www.zetnet.co.uk

>I really am having trouble with Demon, and would like to try Zetnet out.
>For instance, I cannot connect to ANY Web pages held on Demon - including my
>own :\ I just get stuck at the first 'receiving data'.
>906f other pages are fine, so it's not my CAB/STiK setup.

I don't remember having major web problems with Demon, mainly email and terrible usenet access failures. Initially I blamed my software/set-up etc, but as time went on, and other users looked at my configs and pronounced them up-to-date, and then non-Atari users starting having the same problems as me, I decided enough was enough and decided to leave. The non-response from Demon Support was the nail in the coffin. Then a few weeks later I received a letter from Demon admitting that THEY had had some serious problems that had affected my service but that they would not make a refund or consider my request for compensation! The fact that they admitted there was a problem was amazing in itself, but to then try and avoid their responsibilities was downright wrong!

Anyway, just my experience of them, others do have much better service I am sure.

>OK, as you were ... ;)

Tony - pistols or swords then?

Best wishes

Unfortunately it does happen, did your distributor have a spare copy to
send to you?

>Well, like I've said in my mail directly to you the posting wasn't meant
>for you. Just because "Atari computing" is mentioned doesn't mean it's
>directed at the editors/distributors.
>I was merely trying to check if others had received their issue no.4 so I
>wouldn't have to bother you guys if it wasn't available yet.

I appreciate your point, but when it comes down to non-delivery of
magazines, we are more than happy to investigate things for you. Obviously
any reader having problems should contact their local distributor first,
and if you don't get a satisfactory reply, please get in touch with us
direct.

Anyway this discussion has given me a few ideas, and I may try and get some
sort of agreement with our local distributors where by we can post here in
CSAS details of when AC was sent out. This should provide readers with a
rough idea of when they can expect the magazine. And if after a couple of
weeks or so, you haven't received a copy you can then check to see if your
copy has been despatched.

Would the above idea/service be of use?

Let me know privately (not here!) by email if it would be and if there's
enough support I'll discuss it with the ACG and the distributors.

Best wishes

It's, as far as I know, a failing in the file selector. What you can do
to rectify that problem is to install a replacement file selector (Freedom,
UIS 3.3, Selectric, BoxKite...).

>especially after a long session.

Specifically, each time a process requires a folder to be accessed
another buffer is used, so to access this file -
"c:\a\b\c\filename" - would use 4 buffers, one for the root, one for
"a", one for "b" and one for "c". If the process then accesses
"c:\a\b\d\filename" then one more buffer gets used for "d".

Normally, the system reclaims the buffers allocated to a process when
that process terminates. However, if a process happens to use up all
the buffers they are not reclaimed when the process terminates and the
typical result is "not enough memory" alert when trying to run the
next process (reset on this alert to minimise data loss).

I've used the term 'process' deliberately because it gets worse. The
fact that one process may have accessed a particular path does not
mean the system can use that information when another process wants to
access the same path - it stores the info again under the name of the
other process (basepage actually) and for our purpose here the system
can be considered as a process as well. This has serious implications
for non terminating processes like TSR's and accessories, especially
when they also scan folders.

It's been years since I traced all this (tos 1.2) but if memory serves
then the root directory also requires a buffer which would mean a
simple boot with no accessories or auto folder programs takes 3

buffers ...

gemdos (for system to scan c:\auto):
c:\ 1 buffer
\auto 1 buffer

aes (to scan for accessories):
c:\ 1 buffer (duplicated because AES is not same process as gemdos)

Monitor swivel stand, $5

ST Software:
1. $10 each: Geneva, CardFile 4, WordPerfect
2. $5 each: FontFarm, QuickForms, Ultimate Virus Killer 5.7, Warp9,
FirstGraph, DataDiet 2, XBoot, Spelling Sentry, GramSlam, ChessMaster2,
Squish
3. 2 for $5 each: VIP Pro, ImageCat, MVG, BaseTwo, Lookit/Popit,
Codehead Utilities, MacSee, CodeKeys, EdHak 2.3, Personal Pascal,
DBasic, Forth M/T, H&D Base, Micro C Shell
4. Games, 3 for $5: Typing Tutor/Word Invaders, Mean 18, Death Sword
6. 4 for $5: TurboST, Flash 1.6, Home Accountant, HotWire, Time Link
(time management), TOS Extenstion Card Utilities, Pro Sprite Designer,
Renegade, Sound Lab, Super Directory, InterLinkST, Quantum Paint, Degas

For Macintosh (use with Spectre):
Write Now 4.0, $10

]>> STiK for a good connection.
]
]>Don't you think it's ridiculous to call it a rock solid SLIP connection.
]>SLIP is a trivial thing to get in, you can't do much wrong. Nothing that
]>would effect reliability nor speed.
]
] Hmmm, overstatement? Maybe. Well, I should have said no crashes, bombs, time
] outs, or lockups caused by STiK. Reliability nor speed? There is a difference
] here between STiK/STinG, at least for me. It may have nothing to do with the
] SLIP connection per se, but with CAB/OVL/STinG/ combo. It "appears" to be
] connected to default.cfg parameters, however. One thing for sure. I wish you
] had a Falcon to play with <g>.

I work closely together with a friend who has a Falcon. He reports he's seen
some results that were not as good as mine. So please note I'm far from saying
that what you're stating is nonsense. But there are Falcons which run STinG
fine without those problems.

I know there are a couple of bugs left in TCP, and I'm certain I'll hunt them
down. Then your Falcon with STinG will most probably be as fast as with STiK.
For now, a workaround might be to increase the receive window (change it in
the Protocol CPX). Try also to decrease the MSS.

]>The thing that does is TCP. I readily admit it's young, the tcp is not
]>older than three months. Of course STiK's TCP is more stable right now.
]>But I'm working on it, and it will catch up soon.
]
] That would be appreciated, danke. I did see a comment from Steffen Jahn
] (Germany) about TCP and MTU:
]
] There is a "Path MTU Discovery" (RFC 1191) to determine the optimum
] maximum packet size for a connection. Most(?)TCP implementations use it.

STinG does, at least. ;-) It's been stated in the original TCP RFC (#793) that
this should be done (although not mentioned under this name).

]>On the interdependancy. There is some, that right. I'd suggest to get a
]>tiny bit of knowledge what they're good for, and it's easy to set them
]>up. I'd bet when doing your "tweaking" you mostly observed network load
]>fluctuations, and misinterpreted them as caused by your new "tweaking".
]
] One thing I'm 100% sure of is none of this has anything to do with any
] network load fluctuations.

It might not, I do not know your environment. But it's very easy (and tempting
too) to mistake results from net load fluctuations as stack performance values.

]>I just got told that there are users working with STinG and FastSerial.
]>Why should HSMODEM cause Auto folder conflicts ?
]
] STinG and FS, great. FS survives warm re-boots without disconnecting the
] modem, comes with a good CPX. Auto conflicts have to do with NVDI, HSModa7,

HSMODEM should do this too, if you configured it to not drop the DTR line
at system boot.

Comes with a good CPX, yes that's indeed is a bit of a problem with HSMODEM.
I'll provide a suitable CPX eventually. But any programmer should feel
encouraged to go ahead with this ;-)

Cheers Peter

2883. Geneva/NeoDesk/Mint-net

Newsgroup: comp.sys.atari.st
Date: 1997-05-25 00:00:00 UTC
From: bjr@Edison.EbiCom.Net
Message-ID: <5m88rk$lme@einstein.ebicom.net>
Source record: 121965

Aloha,
I'm wondering if anyone has successfuly installed a variation
of Mint-Net (TCI/IP PPP protocol) under Geneva AES and NeoDesk desk-top.
I have a 14meg Falcon, so there should be enough memory to get this
working.
So far, using the PPPkit, I've run into this problem...
If I use the mint.cnf that comes with PPPkit (changing oldgem.prg to
geneva.prg of course), Geneva and mint boot okay, but I can only get it in
2 color mode. Is there some command I can give mint.cnf that determines
the resolution? Perhpas a flag for something to the console?

If I comment out all of the setenv variables in mint.cnf,
leaving the sln, and the exec ppid, etc...Geneva then sucessessfuly loads
and sets the correct resolution (256 color), but launching the sh.ttp to
run scr files gives a memory conflict or some such message. I have
checked to make sure the nohog.acc is loaded.
Yes, I did modify the Geneva GEM.CNF file to drive u: paths,
such as u:/c/geneva,u:/c,u:/bin etc. It seems to find everything okay
except for what resolution to boot in...choosing a default of Falcon 2
color, 80 column mode.
Also, the GNVA_TOS window application likes to freeze the system
when exiting from a program such as tcsh. Is there an alternate TOS
inside a window? Preferably one with vt100 or even ANSI capability?
Finally, if anyone knows of a Mint/Geneva FAQ, I'd love to get
a copy of it!

Thanks,
Brian

2885. 56k Modem Line Test/USA Only

Newsgroup: comp.sys.atari.st
Date: 1997-05-25 00:00:00 UTC
From: csilver@kendaco.telebyte.Spam.This.com
Message-ID: <5m8oml$hkn@news.telebyte.com>
Source record: 121967

Hi All,

U.S. Robotics provides a test to see if your telephone lines will support their x2 modems. To conduct the test you need to currently have a V.34 modem. Using your terminal prg, Flash, Connect, whatever, dial:

1-888-877-9248, hit return/enter at graphics prompt, and enter Line Test at name prompt. After the test, hit H or return for your parameters.

More info at: http://x2.usr.com/linetest1.html

Again, this is USA only. However, it saved me $200 as I was going to buy a 56k modem. Alas, my lines failed the test ;)

Charles

2886. Falcon Wanted.

Newsgroup: comp.sys.atari.st
Date: 1997-05-25 00:00:00 UTC
From: Joe Wilson <joewilson@tenforward.com>
Message-ID: <01bc68e9$5a964f00$3a69d5ce@preinstalledcom>
Source record: 121968

I am in need of a Falcon computer for D2D recording and midi, I have been searching thru the newsgroups trying to track down an ST, and have had lots of luck I am interested in buying a Falcon to sync up to the ST. I use to use an ST for midi, but sold out to the PC (whcih I still like) but it can't top the Atari stuff for sequencing and the rest. If you have a Falcon for sale leave me a message or e-mail me at:
joewilson@tenforward.com

Not looking for anything fancy just an affordable Falcon will do. Thank U....JW

2887. FS: Atari software/books/stuff & Gameboy stuff

Newsgroup: comp.sys.atari.st
Date: 1997-05-25 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.052597.124326.32@wxs7-13.worldaccess.nl>
Source record: 121969

This is the May 6th version of the list of Atari stuff that I have
for sale.

ALL THE TITLES BELOW ARE ORIGINALS, PRE-PROD COPIES, OR EVALUATION
COPIES (so you might not be able to upgrade all utilities).
NONE OF THESE TITLES ARE PIRATE COPIES!

FIRST CATEGORY: GAMES FOR ST, WITHOUT MANUAL, WITHOUT BOX

Games with + are excellent games that I've played for hours and hours...

+Airball
Airball Construction Kit
Arena (2 disks, Psygnosis)
Backlash (Paul Woakes, Novagen)
+Barbarian (2 disks, Psygnosis)
Black Lamp (Firebird)
+Blood Money (2 disks, Psygnosis, bloody excellent game)
Brattacas (Psygnosis, classic hi/med res game)
Deep Space (2 disks, Psygnosis)
Extensor 3.3 (Tron-like game, monochrome only, by Golden Games, ancient)
+Formula One Grand Prix (excellent game, 3 disks, includes manual that you need
for the copy protection - passwords)
+Goldrunner II (boot/game disk plus data disk, by Microdeal, 2 disks in total)
+Goldrunner II Pete Lyon data disk
Goldrunner II some other guy official data disk
Jambala, the Seven Gates of (Thalion, DS disk version)
Jupiter Probe (legendary Steve Bak shoot-em-'up with Rob Hubbard Music)
The Killing Game Show (Psygnosis, 2 disks)
+Leatherneck (Microdeal shoot-em-up, really cool, you have to disconnect
printer to
get it to work, does not work on Falcon, alas)
Monster Business (platform game, Eclipse design)
+Obliterator (2 disks, Psygnosis)
+Prehistoric Tale (Thalion game, coded by The Lost Boys, platform thing)
+Return to Genesis (the first true horizontal smooth scrolling shoot-em-up by
Steve Bak, excellent graphics, great game)
+Revenge of the Mutant Camels, registered version for 1 Mb ST
Shaolin, Chambers of (Thalion, Martial arts game, 2 disks)
+International Soccer (Microdeal, I think it's the best soccer game ever on the
ST)
Spaceport (like Fort Apocalypse on the C-64, great concept, dodgily programmed)
ST Karate (great graphics, old karate game by Paradox)
Stone Age (really nice puzzle game by Eclipse, excellent graphics, DOUBLE

FORMAT, WORKS ON ST AS WELL AS AMIGA!!)
STrikey (Pacman clone by STRIKE-a-LIGHT, ancient)
Teramis, Leavin' (vertical scroller, shooting about spaceship, Thalion game)
Terrorpods (2 disks, graphically impressive, Psygnosis)
+War in Middle Earth (RPG "Lord of the Rings", *really* impressive, 3 disks, Melbourne House)
Warp (nice Thalion shoot-em-up, graphics by ES of TEX)

COSTS: Remember, no manuals and packaging. All I'll be sending you is the disks. I am selling all this stuff at 2.5 British pounds per disk. Refer to the end of this text for more details. This includes postage and packaging.

SECOND CATEGORY: UTILITIES

These are sold without manuals either, unless specified. All original stuff, no pirate stuff.

1st Word Plus, 3.20 TT (2 disks) *
1st Extra (1 disk, version 1.03, allows index/contents etc. for 1st W+)
Crypt It (old Tommy Software encryption thing)
Degas Elite (Batteries Included) *
Ed Hak (editor) *
FastCopy Pro 1.2 * (works on Falcon)
G.I.S.T. the Sound Tool
Desktop Butler James *
Imagecopy 2 * (2 disks)
Imagecopy 3 ** (3 disks)
Mortimer (desk thing by Omikron)
Mortimer Plus * (see above)
Mouse Tricks 2 *
Positive Image ** (2 disks, version 1.0, manual available)
Protext 5 ** (4 disks, and I also have the manual)
Spectrum 512 * (512 colour drawing program, regular ST only)
Turbo ST (screen speeder, ST only)
Universal Item Selector III
View II * (by DMJ software, good stuff)
Warp 9 ** (3 disks, version 3.81, best for ST)
Xboot 3.10 *

COSTS: The regular ones cost 2.5 English pounds per disk. Titles with one * cost 5 English pounds. Titles with two ** cost 10 English pounds extra. If you want the manual sent, that will count as one normal disk (2.5 pounds). The Do note: Protext/Le Redacteur manuals are big whoppers of things, so those will cost 5 pounds extra instead of 2.5.

Examples:

Protext costs (4 disks plus double extra = 4 * 2.5 + 10) 20 English pounds without manual. With manual, it costs 25.

Imagecopy 3 costs (3 normal disks plus double extra = 3 * 2.5 + 10) 17.5 English pounds.

Fastcopy Pro 1.2 costs (1 disk plus extra = 2.5 plus 5) 7.5 pounds.

THIRD CATEGORY: DEMOS.

This is basically a collection of demos that I have. The price varies per demo, and is given for each title. The price specified is in British pounds, so if you want to make another currency of it, check the "additional payment details", below. All demos are ST only!
!! These demos can only be fill-up orders, or orders if you have ordered more than 10 British pounds worth of the first and second category !!

BIG Demo (with handwritten text by ES of TEX, ST only) price: 2
Amiga Demo (ST only): 1
California Beach Girls (fantastic monochrome slide show of girls by the Denise Team. Classic old demo, requires DS disk drive, monochrome only!): 1
Thalion Sound Demo (a copy-protected rare Thalion sound demo, done in 1988, with Mad Max music. Never officially released. You can't put this in a PD library because it's copy-protected!): 2
FNIL (large DS disk drive demo by TNT crew): 1
TCB New Year's Demo: 1
Union Demo: 1
Cuddly Demos: With hand-written stuff by Nic of TCB: 2
Whattaheck Demo: With hand-written stuff by NIC of TCB: 2
Decade Demo by Inner Circle: With hand-written stuff by Griff of Inner Circle, final version of 12 sep 1990, STE compatible: 2
Syntax Terror Demo (megademo by Delta Force, compiled, made, finished and copies at the ST NEWS International Christmas Coding Convention in 1990, signed by New Mode, Slime and Chaos Inc. of DF!!): 7.5 *****
European Demos: (megademo of Overlanders, 2 disks, also finished and copied at the STNICCC in 1990, signed by all members of Overlanders): 7.5 *****
Dark Side of the Spoon (by ULM, megademo, with custom ULM label): 1
Lightning Demo (by pendragons, with handwritten label by pendragons): 1
Punish Your Machine (two disk demo, excellent, by Delta Force): 4
Ultimate Muzak Demo (by PHF), volumes I through V, five disks, only sold as a set, all with hand-written labels by Grazey of PHF: All five for 6
Ooh Crikey Wot a Scorcher (TLB megademo, excellent, signed by all members of TLB plus other participants such as Oxygene, Tyrem, Fury, Hawkmoon and Tanis of TCB!): 7.5 *****
Ventura Demo (2 disks, I think it's by ST Connextion, with hand-written labels by them): 3
Reality is a Lie: 1
Black and White: Rare Polish megademo, with hand-written stuff and pix by them on label: 1.
Colorz: By Haemaroids, hand-written label by them: 1.
Froggies over the Fence: Three disk "last of the true megademos", released september 1993, with custom Overlanders "Froggies over the Fence" graphic labels": 8 for all three disks.
Bedlam demo by Chaos: 1

Never + Forever Demo by STEW, GfA Basic megademo: 1
The Beginning of the Ending demo by Flexichron: Handwritten label by Offbase of Flexichron: 1.

The demos with ***** are kindof special to me, and I am not very keen on selling them because they're signed by old friends and all. So the prices are "STARTING BIDS", meaning that you can bid on them. The person who makes the highest offer gets them.

FOURTH CATEGORY: MISCELLANEOUS

ATARI ST CARTRIDGES

And then there's the "Multiface II" and "Ultimate Ripper" cartridges. I also have those. They're ST-only, NO FALCON COMPATIBILITY. I haven't got the manuals anymore either. If you're interested, email me with an offer (I had in mind about 10 British pounds each).

LYNX CARTRIDGES

The following Lynx games are available for 5 British pounds each:

(No manuals and boxes)

Ninja Gaiden
Rampage

I am willing to swap any of those for Battlewheel.

GAMEBOY CARTRIDGES

(No manuals and boxes)

The following Nintendo Gameboy games are available for 5 British pounds each:

Bubble Bobble (difficult to play, a real challenge)
Dragon's Lair (beautiful graphics, difficult to play)
Hyper Lode Runner (the classic game)

I am willing to swap any of these for that old tennis-game that was released for the Gameboy in 1989 or 1990.

BOOKS

Books in German:

Atari ST/STE/TT Profibuch (Sybex) THE programming bible, in mint condition. Asking price 25 Dutch guilders or 25 German marks.

Das Buch Zum Atari Falcon 030 (Data Becker). Asking price 10 Dutch guilders or 10 German marks.

Das Grosse ST Viren Schutzpakket (Data Becker) Originally with disk, but I haven't got that anymore. Asking price 10 Dutch guilders or 10 German marks.

GfA Basic (book by Frank Ostrowski, including disk). 10 Dutch guilders or 10 German marks.

GfA Handbuch TOS & GEM (GfA Systemtechnik). 10 Dutch guilders or 10 German marks.

Atari ST Floppy und Hard disk (excellent book, Data Becker, hardcover). 20 Dutch guilders or 20 German marks.

Das Grosse GfA Basic Buch (Data Becker, hard cover). 15 Dutch guilders or 15 German marks.

Scheibenkleister II (by Claus Brod, THE mass storage media bible, with disk). 20 Dutch guilders or 20 German marks.

Book in Dutch:

Programmeren van Basic naar C (Data Becker). 10 Dutch guilders.

If you're interested, please email me with an offer (please also mention the country where you live, so I can estimate the postage costs). ALL BOOK PRICES MENTIONED HERE ARE WITHOUT POSTAGE!!

- READ THE BITS BELOW!! READ THE BITS BELOW!! ------------------------------

ADDITIONAL PAYMENT DETAILS:

I would like people in Europe to pay in British pounds or German marks (German marks = British pounds multiplied by three). People from the Netherlands can pay in Dutch guilders (British pounds multiplied by three). I have to request people outside Europe have to pay in American dollars (British pounds multiplied by 2). No cheques, just cash or International Money Orders from the post office.
I don't like to receive any coins, so if you order for 7.5 or 12.5 pounds (or whatever other currency) then please pick another title and make sure the total amount is divisible by 5 (INT(x/5)=x/5). If you pay with Dutch guilders or German marks, make sure the amount is divisible by 10. If you pay in dollars, simply round off the amount to the next whole dollar and use US$ 1 bills.

GUARENTEE

I can't give any guarentees. Some of the games are old, and some of them have been sitting in my disk boxes for quite a while. All ST-specific titles have not been played since 1993 or so. I am not out to rip anyone off. I have been doing "ST NEWS" and have been doing (and will be doing) "Ultimate Virus Killer" for quite some time and I hope people know that I can be trusted.

WANT SOME?

Email your order and WAIT FOR CONFIRMATION (DON'T SEND ANY MONEY YET). The quickest mailer gets the first right on a given title. I'll mail back to confirm and then you can send off the dosh. I will despatch the disks by return mail.

>the resolution? Perhpas a flag for something to the console?

I have a working Geneva/Neodesk/MiNT/Mintnet configuration but I've
use the TAF-package to install MiNT/mintnet. The only problem I had
was that I had to load Geneva after MiNT otherwise Neodesk wouldn't load.
On my TT with a Crazy Dots II graphic card Geneva comes always up in
the desired resolution.

The only thing I can say that the pppkit leads to a lot of trouble.
You should better make use of KEMD2 or the TAF-package to install
MiNT/Mintnet
>
>If I comment out all of the setenv variables in mint.cnf,

The setenv variables are needed. Why I don't know but you need then

> Yes, I did modify the Geneva GEM.CNF file to drive u

AFAIK you don't need to modify the GEM.CNF

> Also, the GNVA_TOS window application likes to freeze the system
>when exiting from a program such as tcsh.

Again I don't have this kind of trouble on my TT

Uwe, I think you mentioned some time ago that Bigdos8 didn't work
properly with a Falcon, and anybody wanting to use Bigdos on a Falcon
should get hold of Bigdos6 instead. I had terrible trouble finding
Bigdos6 anywhere on the WWW :(- it certainly wasn't available at
the Bigdos site.

Anyway, thanks to that nice man Ken MacDonald I now have Bigdos6
(cheers Ken!) - so if anybody else needs it, e-mail me and I'll be
happy to send it to you.

PS. If Bigdos8 works on the Falcon, forget all that!

Jim

2892. STonX

I'm using a HP-UX with a RISC processor and I would like to install STonX. The only problem is that it requires gcc to compile. We don't have it installed so I was wondering if someone has a compiled version that would work on my machine. If so please contact me or send it to me by E-Mail.

BTW: I tried the binaries located on the official site but my machine didn't want to execute them, and yes the TOS image was in the same directory as the executable.

This would be greatly appreciated.

Message-ID: <01bc69a5$10cb23c0$30880fcf@chesster.pcl.net>
Source record: 121795

Hello. Due to a couple of attempts to buy the Atari 1040STf unit out from under others, I have decided to auction the thing off to the highest bidder by the end of the month. If you feel this is unfair, then please feel free to pass on this item, and we can both learn from the experience. If however, you wish to make a bid on the unit, the bidding starts at $4, plus actual shipping cost. Please e-mail your bid to me at chesster@pcl.net if interested.

Thank you,
Jason Whorton

2898. FS (USA): recent software, SM124 monitor , "Atari A-Z" book

Newsgroup: comp.sys.atari.st
Date: 1997-05-26 00:00:00 UTC
From: chambera@cs.pdx.edu
Message-ID: <5mbee9$muo@vega.cs.pdx.edu>
Source record: 121796

I have a few ST things for sale still, buyer prepays and pays shipping.
Make me an offer if you want more than one item, the fewer boxes I have
to pack the better...

Software:

Suzy B's Software CD-ROM 2 CDs of PD/free/shareware for ST, $10
some Falcon stuff, ISO 9660 format
so it's readable from any computer,
Toad sells these for $20 now

Ultimate Virus Killer recent version (about a year old) $15
of great Oregon Research virus
protection program

Diamond Back 3 recent version of hard drive $22
backup program, supports
floppies/tapes/removables

PageStream 2.2 desktop publishing software, $25
works great with
MagiCMac or Gemulator. Includes
PageAssistant help accessory
and extra font and clip-art disks.

Hardware:

SM124 monitor Nice bright B/W monitor, screen size has
never been tweaked, but needs some work:
When it's been on a while the picture starts
to "wrap around" on one side---turning it on and
off fixes it. Make me an offer, I just want
it out of here...

Books:

"The Atari A-Z" by Mark Baines, a great reference for all things
ST/Falcon-related. In white looseleaf binder. $15

Also willing to trade for Atari 7800 games, 8-bit Atari hardware, old HP
calculators, small SCSI hard drives, a good PC joystick, or anything else
with buttons and flashing lights on it... 8-)

Thanks for reading,
Alex Chamberlain
chambera@cs.pdx.edu

Yag Alone <b2b3@elec.iuta.u-bordeaux.fr> writes:
> But the internal include a PC SCSI card,which is totaly useless and
> increase the cost...
The insider does not cost more than the external version. You can even
get a "bulk" version without SCSI card and cables, which is even cheaper.

> By the way, ID 5 or 6 isn't a real trouble: you can change others units
> ID, and use AHDIConf to force it to scan the units you want to use.
You can't always change all other units' IDs, as there are enough external
devices (scanners, streamers) which are limited to certain IDs as well.

And don't forget that not all drivers allow you to specify which IDs
should be scanned first. So, if you'd like your Zip to be drive C (for
whatever reason), there are not many IDs left for the other drives. Of
course, this is not a problem of the average user, but there /are/
situations where it's good not to be limited to two IDs.

The standard ST disk format is 80 tracks and 9 sectors/track, giving you a 720K disk capacity (just like standard PC floppies).

Now, some games used special formats for disk protection or increased capacity reasons

These were formatted with sometimes up to 82 tracks and 11 sectors, which was already just about ok on the original ST drives, but many modern PC drives (and probably Mac drives too) cannot handle.

So, I guess you will not be able to run those games on MagicMac, unless you get a special mac formatter that can format disks in that unorthodox way.

Even then, games often use special routines addressing directly the hardware, making them unable to run on an emulator.

Why is it that the Falcon can connect to an IBM and transfer data with the ParCopy program, it can connect to a hand held scanner with an adapter via the parallel port, but I can't connect to a parallel based zip drive? I was always under the impression that the Falcon's centronic port was bidirectional and therefore would be able to attach parallel based drives.

It's all "Reading between the lines" stuff, open to different
interpretations, Mine is as mentioned..

>>SMILE...I don't see how anyone can call me being picky on that

>sarcastic comment :-)

Haa that will be the "You have to think about the concept" bit, I
meant it differently than it probably came accross, probably the fact
that my only other newsgroup is alt.brain.teasers, Probably should
have put.. look at it from another angle :)

>>>> Geocities give free web pages...so do a few other firms,

>A serious answer to a serious question. So you get a full internet account,
>email, web space etc etc all for free then? Tell me more.

Nope, the subject is free web pages... the firms I mentioned give you
a free web page, I have found a few such firms, giving anything from
50k to 5 meg, you get your own personal login and password to use the
pages as you would any other..
Geocities is by far the best of the bunch, currently with half a
million free 2 meg web pages out there, they also give you a free
email, but its not very good,

The only thing you need for the free web page is a valid email
address, and you place a small link anywhere on your page that links
to geocities so other people can get there own,

When you apply for your web pages you even get asked if you want to
be placed on certain or general mailing lists or NOT be placed on any
:)

Everyone I know that has a Geocities free page are quite happy, no
complaints :) and there certainly doesn't seem to be any catches,

I think this is great for ATARI as we have so few ATARI ftp sites,
some are closing and some won't allow uploads or take a month to move
anything, Someone like myself can get five free 2meg web pages and
have my own little ftp empire <smile> My ISP only gives me one meg, my

current software project requires 3 meg so far.. so this is good for
me,
There are a lot of ATARI files that ftp sites won't accept, legal
files!, the web pages can be used for that and lots of other things,

>have! I sat here with a wry smile on my face when I commented on your
>original points - honest :-)

If I am not smiling...then I am not sat at my ATARI... now wasn't
that sweet :)

>I enjoy discussing things in a robust manner. If you think I'm bad you
>should attend an ACG meeting with Joe Connor! :-)

Who?........hehehehe

>Anyway, sorry if I've bruised you, I didn't mean to.

You didn't.....

You don't mention if you have a HD or DD disk drive in your Atari. Get the correct disk for your drive and either format it on Atari in PC mode (Fastcopy, Ecopy or Kobold will do this, as well as TOS >1.2) or just on PC in the normal way. Then copy the files from PC - it's safer to do this in DOS, as Win95 puts some extra information which will confuse Atari and you may use the disk on both computers.

The other option is to connect both computers with Ghostlink (a program) and a serial cable, but unless you want to carry over several hundred MB of data, the disk option is easier.

Maciek

>the required size. It obviously has its own version of GDOS within the prg
>as GDOS is not required when loading logic. Is there a Font conversion prg
>that will enable me to convert TTP fonts into Bitmap fonts ?.

This isn't going to be much help but it is possible to convert PS type 1 to
GDOS bitmaps but only via 2 very cheap programs FONTY will convert them to
Calamus fonts and FONTKIT+ will convert those to any scale bitmap.

You can get programs on other platforms like Fontographer to convert
between TTF and PS1

Fonty and fontkit+ are available from
FaST Club , 7 Musters Road, Nottingham, NG2 7PP,
England. Telephone (+44) (0)115 945 5250.

Source record: 121816

Brian Roland (bjr@Edison.EbiCom.Net) wrote:
: I'm wondering if anyone has successfuly installed a variation
: of Mint-Net (TCI/IP PPP protocol) under Geneva AES and NeoDesk desk-top.
: I have a 14meg Falcon, so there should be enough memory to get this
: working.

That should certainly be plenty of memory. BTW, it's TCP/IP (not TCI/IP)
and it would be better to say that Neodesk runs under Geneva which runs
under MiNT. But that's not really important.

: So far, using the PPPkit, I've run into this problem...
: If I use the mint.cnf that comes with PPPkit (changing oldgem.prg to
: geneva.prg of course), Geneva and mint boot okay, but I can only get it in
: 2 color mode. Is there some command I can give mint.cnf that determines
: the resolution? Perhpas a flag for something to the console?

I had this problem with Geneva at one point, but I don't recall what
caused it. I would suggest that it may be because Geneva can't read its
configuration file, but that is just a guess. I don't use Geneva anymore,
so it's a bit difficult to say.

If you can't figure it out, you could perhaps try changing the NVRAM of
your Falcon in order to make it boot in the mode you want. Otherwise, you
may find some small resolution change tool somewhere although I have never
heard of such a thing.

: Also, the GNVA_TOS window application likes to freeze the system
: when exiting from a program such as tcsh. Is there an alternate TOS
: inside a window? Preferably one with vt100 or even ANSI capability?

I never had a problem with the standard one supplied with Geneva, although
I didn't use it much. I believe there is a program called "screen" which
gives VT100 capability, although I have not tried this myself. Also, I am
unsure whether screen would work for a GNVA_TOS window or not - I have
only heard of it being used on a virtual console. Hopefully someone else
can be more helpful here.

Otherwise, there is Miniwin or Toswin, although both of these support only
VT52.

: Finally, if anyone knows of a Mint/Geneva FAQ, I'd love to get
: a copy of it!

I don't know of such an FAQ, but perhaps you could check the general FAQs
- hopefully someone else will be able to post the URL where these can be
obtained.

2919. Help w/ST-Guide v1.4, please!

Newsgroup: comp.sys.atari.st
Date: 1997-05-26 00:00:00 UTC
From: John Hechtman <johnhechtman@delphi.com>
Message-ID: <55N-Y7G.johnhechtman@delphi.com>
Source record: 121817

Hi Folks,

I need to use the new (German only) version of ST-Guide to read some .hyp files. I can call ST-Guide as an acc to read 'em, but instead of opening to a fileselector, I get the following messagebox (without the quotes): "? ST-Guide <KATALOG.HYP> Konnte Nicht geoffnet werden". The "o" in geoffnet has an umlat (sp?) over it. I know that there's a ST-Guide .inf file that the program looks to for its paths, but there is no KATALOG.HYP file in the archive for the .inf file to find. I have the STOOL program that seems to be a proggy for _creating_ a KATALOG.HYP file, but I'm not sure how to use it.

Does anyone have a set of English docs for the newer ST-Guide? Or can you help me get it working? I had the older (English) verson working fine, but it won't load .hyp files created with the newer versions. Thanks to all in advance for your help!

John

John Clark <JonClark@consltec.demon.co.uk> spake thusly:

J > I seem to recall IBM offered both CPM/86 (with a GEM front
J > end) and MS- DOS, and, I don't know why, pushed DOS.

IIRC, the Infernal Boring Monster didn't push DOS; it was simply priced cheaper ($40 vs $240 for cp/m). Given that Billionaire Bill didn't have to do any real work to make DOS, just license the hack from Seattle Computer Products, and you can see why he could sell for a lot less than DR could.

Surprisingly, Gary Kildall is described as a 'good friend' of BG in several histories, and it is certain that Kildall's Digital Research had at least one 'joint venture' with Micro$oft many years ago. Somebody with a suspicious nature (like myself) might find the words 'industrial espionage' going through his mind.

Time magazine's obituary for Gary Kildall includes the data that he never sued M$, and the fact that many people wonder why he didn't.

: Hades 040, but I'm still inclined to go for a Falcon in a rack case. What I
: want is more memory and HD space, decent video modes and a stab at running
: Linnux. I think I'd miss the DSP if I had a Hades, and the new version of
: TOS is relatively untested. What do you think ?

I would say, _definitely_ go for the Hades. The Hades will be _hugely_
faster than the Falcon, and it is more expandable (standard SIMMs for
RAM, ISA, PCI and VME bus...) and is capable of _far_ better video modes
than the Falcon (seeing as you can use any normal graphics card). Try
getting 1280x960 in 16million colours on a Falcon, for example...

AFAIK, the TOS in the Hades is simply TOS 3.06 with a some "minor"
changes, and I don't think there will be any problem here. And in any
case, most people don't use much of TOS anymore anyway.

And when the computer is probably about 20 times faster than the Falcon
anyway, I really don't think you will miss the DSP. Of course some
software will only work with a DSP, for example Apex Media, but then what
would you want Apex Media for when you can have things like Photoline?

If you want to run Linux, I don't think you would find the DSP very useful
anyway, and the extra speed of the Hades would definitely be very useful
if you want to use the X Window System.

All IMHO, of course.

2934. TRADE [USA]: A500 system or components for Falcon 16 meg board, Nemisis, NVDI 4, Outburst...

Newsgroup: comp.sys.atari.st
Date: 1997-05-27 00:00:00 UTC
From: lmcclure@aristotle.net
Message-ID: <5mdpe3$rq5@socrates.aristotle.net>
Source record: 121832

I am looking to trade one or more of the components to my Amiga 500 system (listed later in this message) for one or more of the following:

* 16 meg RAM board for Falcon030 (populated Atari board, or 0K or populated expansion accepting a single 72-pin SIMM)
* Nemesis board
* NVDI 4
* Outburst 3.x

* 2.5" IDE HD (340meg minimum)
* SCSI Zip drive
* Syquest EZ-135 or Flyer (SCSI)
* Iomega Jaz
* 4-color inkjet printer (Epson or Canon preferred)

* Hi-Fi VCR
* ProView TV box

Here is what I have to offer in trade:

- Amiga 500 computer with 1 megabyte of chip RAM, Super (ECS) Denise chip, 3.1 ROM and original 3.1 diskettes (no manual)
- ICD AdSpeed accelerator (Amiga specific version - not for ST's)
- Roctec RocHard sidecar IDE/SCSI/memory expansion. Includes 200meg 3.5" IDE hard drive and 8 megabytes of memory. Cosmetically matches the A500.
- ICD Flicker Free Video Board (De-interlaces the A500's interlaced modes for flicker free viewing. Requires use of a VGA, SVGA or multisync monitor. DB-9 output, pin-compatible with NEC Multisync II; adapter or new cable required connection to standard VGA/SVGA monitor).
- HAM-E device, with manual and software. External device connects to the Amiga video port and provides a 256-color lo-res mode and a 16.8 million color extended HAM-type mode.
- Amigen genlock.

If you are interested in trading, contact me via e-mail with what you have, and what you want in return. Be reasonable; don't expect me to trade the entire system for NVDI 4, for example. <grin> Likewise, I won't expect someone to trade me a Jaz drive for just the A500.

trade me a Jaz drive for just the computer (or even

I have ST, STE, Falcon, PC and a Hades 060.
Hades is very, very fast but has no DMA sound.
If you are looking for more speed, memory and decent video modes
i think Hades is the best choise.

1. Format a 720 kb DD floppy disk on your PC. Copy the midi files
from your pc to the disk. Put disk in Atari and you will be able to
load the midi files in your atari.

2. Midi cable from pc midi out to atari midi-in. Push record on your
atari sequencer software and play the midifile on your pc.

I hope this helps you:)

Not exactally true. Currently with the HADES, only ATI Mach64 cards
are supported. I think I had seen a news post where even with those
cards, V-RAM is a must. ET4000 drivers and cards are giving <some> users
problems. There is suppose to be a driver in the works for the ET6000
cards as well as a PC audio card and dedicated Pentium card ($$$$$$$).
You might want to consider that one of these ATI cards runs
around $180.00. Could be more, probably not less. The NOVA drivers will
cost you $180.00 as well. So you will have $360.00 U.S. wrapped up in
the video alone. As far as the Hades being hugely faster, this is true
for the 060 version (add about $700.00 U.S.) but an accelerated
030 Falcon comes pretty close to the performance of the 040 Hades.
(read that pretty close, not as fast as). If you can get your hands
on an Afterburner, the point is mute compairing the two 040's. The
Falcon wins hands down because of software compatibility IMHO. The
Hades is very nice for DTP and Graphics, but the Falcon retains very
good compatibility with low res ST software, and of course (if I didn't
say this I would have to kick myself:) Apex Media, Rainbow Multimedia,
Cubase Audio ect. Sorry but digital sound is lacking on Freds machines.
If you want digital audio, get the Falcon because if you can bearly
manage a
Hades now, you probably won't be able to afford the extras for the Hades
to do the
same thing if and when the options becomes available. It boils down to
the Hades is a fast TT. It is definetly not a Falcon. If you know some
one with a TT and a graphics card, take a look as that is what you will
get with the Hades, only faster. The Falcon is a completely different
machine, and again, IMHO a more complete package for someone just
upgrading
from an ST.

Used Falcon $400.00-$500.00
Rack case $300.00
Nemesis $ 80.00
Afterburner $800.00
RAM card $ 50.00
NOVA card $650.00

Nice thing about installing a NOVA card in the Falcon is you can leave
your
RGB monitor attached and just skip the NOVA drivers at boot up for
compatibility,
or install a VGA switch box from your Falcon video and NOVA card to the
monitor.
Down side of the NOVA card is you are only allowed 4mb of ST ram, but it
is
compatible with Afterburner, Magnum, etc..... fast ram.

As far as 32bit 1280*960 video mode, it's no problem for this Falcon:).

>
> AFAIK, the TOS in the Hades is simply TOS 3.06 with a some "minor"
> changes, and I don't think there will be any problem here. And in any
> case, most people don't use much of TOS anymore anyway.

You will more than likely be using it on the Hades:). I guess there is
a Linux package that is now working on it, but he did say he only wanted
to dabble. No MagiC on the Hades. Is there another O/S? Anyway, TOS
4.04-
4.92 is pretty nice and stable. TOS 3.06 is kind of like going back to
TOS 1.62 (sorry TT owners, but I have one too:).
>
> And when the computer is probably about 20 times faster than the Falcon
> anyway, I really don't think you will miss the DSP. Of course some
> software will only work with a DSP, for example Apex Media, but then what
> would you want Apex Media for when you can have things like Photoline?

You must jest?:). The 040 is maybe, maybe six times faster than a
STANDARD
Falcon. Thrown in the $400.00 video and things do seem to speed up more.
I did a shirt-tail benchmark with Phoenix (Zenomorph) running on an 040
and a 32MHz
Falcon with fast ram. The 040 machine rendered the sceen in about 1/3
the
time, and a 32MHz Falcon is not that fast (this was with a standard bus
speed).
Apex Media and Photoline are quite different. One is for animation, the
other
for image processing. Actually you should see Rainbow Multimedia run
even on
a bog stock Falcon. Pretty damn fast (good old DSP assembley:).
He will surely miss the DSP for real time audio effects and processing.
Even if the audio card is made available for the Hades, what software is

there currently to support it?

>
> If you want to run Linux, I don't think you would find the DSP very useful
> anyway, and the extra speed of the Hades would definitely be very useful
> if you want to use the X Window System.

Can't disagree with you there:).
The Hades is a very nice machine. It is just really hard to compair the
two without
knowing what the user feels his requirements are. I weighed upgrading my
Falcons, or
going for the T060. After several months of brainstorming, I ended up
with a Falcon 040
and Nemesis/NOVA in a Falcon Rack case. The other Falcon with the Mighty
Sonic will be
tested for compatibilty with the Nemesis for a fast 030 based machine.
If that fails,
my sons standard Falcon will benifit from the Nemesis.
If I could have ordered a T060 with a video capture card and editing
software, the
story would have been a whole lot different:).
One more thought. You can keep your Falcon in the standard case,
purchase a 2.5" 1.6gb
IDE hard disk, add a Nemesis and get pretty good performance and
enhanced video, add
14megs for around $800.00. Think about it..... There is always the SCSI
connector
at the rear of the machine to spend the rest of your money on:).

Just format a 720K double density disk on the PC and use that to transfer the
files. The ST can read and write PC disks.

BTW, There's nothing wrong about being a german you know!

SCSI or parallel ZIP ? Common knowledge is that the parallel version cannot be
used on the Atari because of Atari's implementation of the parallel port.

This is in the Quick FAQ (see .sig below).

You need to use a SCSI Zip drive, a DMA/SCSI host adapter that supports
parity, and just about any of the modern HD Driver packages.

This is my 3rd reply to your posts asking the same question over the last 3
days now. I'll try to sum up for you:

msa and .st are disk image formats (exact copies of a formatted disk, with
it's tracks and sectors), even when these formats are non-standard.

msa files can be read by Magic Shadow Archiver, which is an ST program that
will write them onto real floppy disks with the original format. There is
probably a PC program around to convert .msa to .st.

st files can be read by Pacifist, but also by several of the DOS utilities
that are on the Pacifist related page. These utilities can either convert them
to .msa (see above) or write them directly onto real floppies on the PC.
If the PC is physically capable of formatting and writing those wierd disk
formats then just stick those floppies back into your ST and you should be
set. If not, then you'll have to give up.

All of these utilities can be found by surfing around the Pacifist related
sites: probably at the same places where you found those PIRATED .st and .msa
files.

If you don't know where to find Pacifist related web sites, look in the faq
(check out my .sig) or use a search engine.

You're also confusing disk formats: There is no such thing as 'single-density'
in the Atari world.

Disks can be either 'single-sided' or 'double-sided', and 'double-density' or
'high-density'. It boils down to this:

SSSD (single sided, single density) 180K -only on antique PCs and CP/M
machines
SSDD (single sided, double density) 360K -first 520STs and STFs, not on 1040s
DSDD (double sided, double density) 720K -the standard in the ST world
DSHD (double sided, high density) 1.44M -the standard on modern PCs, only on
Falcons, TTs, some STEs and modified STs.

Your ST probably has either a SSDD or a DSDD drive. Of course if your disk images are for DSDD disks then an SSDD equipped 520ST cannot read them anyway and you'll have to give up.

Another quick advice: if you don't have the knowledge to use pirated software, then a good idea is not to call for help in a public forum.

Yes, the best one is probably PaCifiST and it's freeware too. You will need
one of those TOS rom images though.

There are legal issues with distributing TOS images, that's why none of the
emulators distribute them in their package. However, there are plenty of them
all over the Net now even though distributing them is software piracy,
therefore illegal.

Do a quick websearch or surf a little bit around the PaCifiST web sites that
you'll find in my Quick FAQ (see .sig below).

THE ATARI ST QUICK FAQ
v1.3 - May 20th 1997

In order to save bandwidth and avoid comp.sys.atari.st newcomers asking the same questions over and over again, here is a quick list of the most Frequently Asked Questions (FAQ) and, hopefully, useful answers.

http://www.geocities.com/MotorCity/2090/quickfaq.htm (USA) HTML version

or

ftp://ftp.sn.no/user/hallvart/atari/info/quickfaq.txt (Norway) ASCII version

If you have neither web or ftp access, send me an e-mail at the following address, and I will be happy to send the FAQ to you:

bales@garonne.stortek.com

This announcement will be posted once every week.

Getting a used Falcon with a Afterburner040/Nemesis/SuperNova would still
be cheaper than a Hades040 and much more fun!

> And when the computer is probably about 20 times faster than the Falcon

Photoline wont be anything compared to Apex 3 when it gets released. Photoline
is very good but A3 will knock the socks of you. :-)

2957. CD-ROMs full of ST games???

Newsgroup: comp.sys.atari.st
Date: 1997-05-27 00:00:00 UTC
From: thehidden@ludens.elte.hu
Message-ID: <1997May27.183633.40731@ludens>
Source record: 121855

Hello,

I've heard from someone that there are CD-ROMs available that contain
lots of old ST games. Please, if you know something about it, let me know.

You can reach me at thehidden@ludens.elte.hu.

Thanks in advance.

2958. CHIPTUNES for ST?

Newsgroup: comp.sys.atari.st
Date: 1997-05-27 00:00:00 UTC
From: thehidden@ludens.elte.hu
Message-ID: <1997May27.184140.40732@ludens>
Source record: 121856

Does anybody know sites on the Internet where I can find chip tunes for the good old ST's Yamaha soundchip?
(for example: Mad Max modules, Big Alec, Count Zero, etc., etc.)

Or does anybody have chiptunes? I would really like to get them, I only have some Mad Max modules and a player, and lots of demos, but that does not matter. I would like to get the tunes themselves.

Please help me if you have any information about that. Thanks.

Cheers,

2959. Re: Please Help run Atari 1040 ST program on PC

If you can get your collegues to send you GFA program in code-listing
form you can run it on the freeware GFA Basic for Dos Trial version.
Observe it must be in text form (.LST) not a .GFA file.You maybe have
to do some alterations to the code but most of it will run on the
GFA Basic for Dos.
http://ourworld.compuserve.com/homepages/gfasoft/ is the site for
Gfa soft, the server is sometimes down but try again

>Will an Atari ST color monitor work on an IBM compatible?

An RVB monitor on a VGA output? No.

>Anyone with info on making it work would be appreciated.

There are adapters in PC shops to use a TV on a VGA output, some could
perhaps work with RVB monitors too. But it's expensive (800 to 2000 FF)
and the result is poor: a VGA monitor is much better than a TV.

Bye! Bruno.

2962. TTF Fonts and NVDI

Newsgroup: comp.sys.atari.st
Date: 1997-05-27 00:00:00 UTC
From: tparrett@parrett.fast.co.za
Message-ID: <864754948_OASIS_@parrett.fast.co.za>
Source record: 121860

More questions re TTF Fonts. I notice that the Speedo GDOS vector fonts are in two parts ie one part is the font file and the other (I think) is used to identify the font. If I import a TTF font from a Windows environment there is only one file per font and when I load it into the Falcon (runnning NVDI 4) I see a message that the font has no ID but yet it will still display. Is it possible to create an ID for such fonts ?

Another question concerns the font in the Windows version of Band In A Box called PG Text. I can run this under Windows outside of Band In A Box but if I try to import the font file to the Falcon it wont load,giving a message that the file is damaged. I find that I can load the file into another Windows box and it will load OK. Has anyone out there tried this ?

A final question.....Does anyone know of any suitable source material where I can read about vector fonts (for that read TTF)and more specifically their use on an Atari ?. thanks
Ted

Um....no offense, but that price is absolutely out of line. However, if
somebody buys it for that, then more power to you. $50-$80 max is a little
more the open market value I believe.

Ta All.....

I think you've confirmed my feelings.

I *would* miss the DSP, and as for waiting for a compatible version of Magic and all the other stuff ? Besides, how would I play BuzzSaw ?

<PLUG>

http://www.elis.demon.co.uk/ictari/ictari.htm

</PLUG>

Sure Linux would be rather slower, but I'm not doing badly on this STFM. I'm mostly after a big hard drive, better graphics and some proper multitasking, just so I can get something done while Oasis downloads my news. There are a couple of freeware packages that I'd like to re-compile, (odd molecular dynamics package mostly). Magic will do fine for most of the time.

Have Fun,
"Augeas"

>cards as well as a PC audio card and dedicated Pentium card ($$$$$$$).

This is even less true...

The ATI Mach64 is one card that is available for the Hades. ET4000 cards are not a problem at all, provided the proper drivers are used. ET6000 cards are now supported with the software finished. Other video card drivers are in the works.

In fact, you have more choice with the Hades, than with the Falcon, when it comes to video card support. The big deciding factor here is that the Hades can use PCI cards whereas the Falcon does not have an interface for PCI. I only know of 1 video card solution for the Falcon, the NOVA and it uses the ATi Mach64 cards in an ISA package. PCI has twice the bandwidth, 64bit as opposed to 32bit. The NOVA for Falcon is much more expensive than the ATi card and drivers for Hades and rare as hen's teeth to boot. ISA is a "dead" technology, buying an ISA card is not that easy anymore with all new PC's shipping with PCI now.

In fact, the NOVA distributor in North America is unable to source ISA cards that work with the NOVA solution for Falcon, TT or Mega.

It is true, for the PCI Mach64, only VRAM is supported.

>You might want to consider that one of these ATI cards runs
>around $180.00. Could be more, probably not less. The NOVA drivers will
>cost you $180.00 as well. So you will have $360.00 U.S. wrapped up in
>the video alone.

Yes, and with a Falcon, you need the above, plus a specialized PDS to ISA adaptor which costs even more...

A PCI based ET4000 card cost 50.00 US and an ET6000 costs 110.00 US.

>As far as the Hades being hugely faster, this is true
>for the 060 version (add about $700.00 U.S.) but an accelerated

Actually, the price difference between 040 and 060 is $500.00 US ($700.00 Cdn.)

A DirecT40 do it yourself kit now starts at 799 UKP, $1299 US, $1799 Cdn. and the DirecT60 do it yourself kit now starts at 1099 UKP, $1799 US, $2499 Cdn.

(these prices are for mainboard, processor and cabling kit)

>030 Falcon comes pretty close to the performance of the 040 Hades.
>(read that pretty close, not as fast as). If you can get your hands
>on an Afterburner, the point is mute compairing the two 040's. The

Depends on which part of the performance you are compairing. An 040 is an 040. The Afterburner 040 is equally fast as a Hades 040. Where the Hades outperforms the Afterburner is in bus transfer, memory read/write, EIDE transfer speeds and definately VDI!

> Sorry but digital sound is lacking on Freds machines.

Wrong. ;-) Digital Sound is available for Hades.

>You will more than likely be using it on the Hades:). I guess there is
>a Linux package that is now working on it, but he did say he only wanted
>to dabble. No MagiC on the Hades. Is there another O/S? Anyway, TOS

Geneva, MiNT and Linux all run on the Hades. MagiC is reportedly being worked on.

>He will surely miss the DSP for real time audio effects and processing.

Not anymore! ;-)

>Even if the audio card is made available for the Hades, what software is
>there currently to support it?

It ships with a very very nice software package and SoundPool's products are being tested and made compatible.... in fact much success has already been achieved with their products on the Hades w/ DSP and Sound card and this solution is actually more powerful than a Falcon with a DSP.

All the best,
Chris @ Computer Direct

ISTR something like this with the FalconWings SIMM board.

The flickering was eliminated by screening the SIMM board, and using
60ns fast page mode SIMMs.

Does Motorola still produce 040 processors?

Get with the program and get a modern system like PowerMacs! Umax
sells a PowerMac clone called the C500/140 which is a upgradeable 140
mhz 603e box with 16 megs ram, 1.2 gig, internal/external scsi, 16 bit
sourround sound, 3 PCI SLOTS and 8x CD for $899 from MacWarehouse!
Much cheaper than the $2500 Hades and more powerful to boot..

I was just going by what you had stated your personal perference
was......
The ET6000 drivers are now supporting 24 and 32bit color?
Are the drivers able to utilize the complete chipset functions on the
ET6000?
(I think it was hardware MPEG decoding).

No arguement there. Anyone would have to admit that going from an STFM
to
a machine with the above configuration would blow your socks off. It is
a
very large step worth the time considering.
>

Very true, but you still maintain ST Low compatibility by having the
Falcon
video modes available. It really depends on what the guy wants to do. I
would
be the first to admit that I wouldn't mind having a PCI based TOS
machine.
There may well be a PCI card/ adapter available for the Falcon soon. It
won't
do much for the speed, but will allow the current type of PC cards to be
utilized.
>
> A PCI based ET4000 card cost 50.00 US and an ET6000 costs 110.00 US.

Are the drivers priced in the same range as the ATI drivers?

Computer Direct does have some very competitive pricing. I seem to
remember
System Solutions and Toads (if they indeed ever had a stock) price to be
slightly
higher. Maybe something lost in the conversion rates:).

Depends really on what you wish to do, task wise, with your computing time
and which software you plan on using. Keep in mind that Hades is not a
Falcon clone, rather a TT clone.

Since you state that what you really want is more memory and HD space,
decent video modes and a stab at running Linnux (actually this is Linux,
btw!) Both machines will provide this opportunity. The real questions you
need to ask, are how much memory will be enough, what is a decent video
mode?

This is something everybody has to decide for themselves. I have customers
with 256MB in their DirecT60 and they want to add more. For some of our
customers, 1 MB DRAM ET4000 video cards are plenty, others want 4MB VRAM
cards. Others have asked about 8MB cards...

There is a DSP card (with dual DSP ports) in final construction. It
provides both Analog I/O and Digital I/O via SPDIF optical or coaxial. It
comes bundled with a very very nice professional Audio Mastering software.
Up to 99 tracks and real time DSP effects on 16 tracks along with 16 outs
via dual DSP and 2 Jam OUT 8's or FA-8's.

SoundPool is working to ensure that their hardware and software products
are compatible with Hades and the DSP card / sound card. In fact many
SoundPool products have been tested with success.

So, if you plan on doing Audio work, the Hades is starting to look like an
excellent choice.

Upgrading a Falcon to an 040 and adding a graphics card etc. is another way
of going. To compare the speed difference is unfair. The Hades has a much
faster bus with wider bandwidth, faster RAM read/write and is much more
expandable. In my opinion, the Hades is more stable than the Falcon with
Afterburner.

Have a look at Atari Computing Issue #5 for our advert. to compare pricing.

As far as Publishing and imaging go, the Hades with 68060 is faster than
the Afterburner when used with software that utilizes the DSP in Falcon.

The Hades uses a slightly modified version of TOS 3.06. It is very stable and can be upgraded easily. In fact, we have had upgrades on this TOS already. It is not a "new" TOS and is very much "tested".

Hope this helps you in your purchasing decisions. Join our mailing list to get a better feel for these new machines. Info on joining can be found at http://compdirect.com/directions

All the best,
Chris @ Computer Direct

Yea this is a plug:). I would like to thank B&C for managing to ship something as large as a Falcon rack to me in just two working days. (Not to mention the deal I got). I didn't know I had been a customer since 1987. There are some dealer records for you:).

It is amazing sometimes how long it takes other dealers to get a shippment out. It's called UPS, it's world wide, and the damn stuff gets here when they say it will. No transfers or bull and a Web site to check the progress.

Thanks B&C

Mike

Thanks for the info Chris, the Hades sounds *nice*! But, will we ever
see Cubase Audio run on an '060? Audio mastering software is a plus,
but what I really need is Cubase.

btw- does Cubase Audio have any problems with the '040 Afterburner?

thanks

Bruno,

Thanks for responding to my ST monitor & IBM question. I wasn't sure
what type of monitor the SC1224 was. Now I know. I guess I'll keep it
on my Atari.

Thank you.

Sincerely,

Howard in Michigan

TOS 4.92 has been floating around several sites for a time. To my
knowledge
it is not included with any system, definetly not on chip. I only
mentioned it
as an alternative (whatever the legal status is) to V4.04.

Same subject still amazes me. I purchase a couple of SCSC EZ135's and
one IDE version for the Falcon. I couldn't be happier. One year later
I have no problems to report at all. Next on the list is a CD-Recorder
as soon as Roger manages the software:).

I have the following Atari ST Hardware and Software for sale
or Trade. None of the prices include shipping. If you would
like more information on any of the items listed I can be
reached internet email at pmbarnes@servcom.com.

Will accept payment of Money Orders only and the must be US
funds!

If you don't like the prices make an offer. Would like to sell
all of this!

Hardware:

Atari Mega ST 2 four megs of ram $200.00
Atari 1040 ST DS disk drive one meg ram ..... $ 40.00
Atari 1040 ST DS disk drive four megs ram ..... $ 50.00
Atari 520 ST one meg of ram ..... $ 25.00
Atari 520 ST 512K ..... $ 20.00
Atari SF314 DS disk drive ..... $ 20.00
Atari SF354 SS disk drive ..... $ 15.00
Master-3S Atari disk drive ..... $ 30.00
Atari SC1224 color monitor ..... $ 60.00
Atari SM124 mono monitor ..... $ 40.00
Atari mouse ..... $ 5.00
Discovery Cart with Mac Roms ..... $ 25.00
Blitz Cable and software ..... $ 20.00
Lots of power supplys and cables ..... $ prices vary!

Software:

Wordperfect ..... $ 20.00
Degas Elite ..... $ 10.00
Data Manager ST ..... $ 10.00
Word Writer ST ..... $ 10.00
Swiftcalc ST ..... $ 10.00
Phasar ..... $ 10.00
Certificate Maker ..... $ 5.00
I.S. Talk ..... $ 10.00
Regent Word II ..... $ 10.00
VIP Professional ..... $ 10.00
Atari Planetarium ..... $ 10.00
Atari Scholastic Series (12 programs) ..... $ 50.00
Celebrity Cookbook ..... $ 5.00
Pagestream ..... $ 15.00
Boulderdash Construction Set ..... $ 5.00
Cadaver ..... $ 5.00

Chase H.Q. ..... $ 5.00
F29 Retaliator ..... $ 5.00
Mean 18 Golf ..... $ 5.00
Switch Blade ..... $ 5.00
Strip Poker ..... $ 5.00
Death Sword ..... $ 5.00
Indiana Jones ..... $ 5.00
Winter Games ..... $ 5.00
Zac McKaracken ..... $ 5.00
Deep Space ..... $ 5.00
Targhan ..... $ 5.00
Captain Fizz ..... $ 5.00
Plotting ..... $ 5.00
The Hound of Shadow ..... $ 5.00
Oriental Games ..... $ 5.00
Jinxter ..... $ 5.00
Zero Gravity ..... $ 5.00
Scramble Spirits ..... $ 5.00
Ploutos ..... $ 5.00
Arcticfox ..... $ 5.00
Marble Madness ..... $ 5.00
Trail Blazer ..... $ 5.00
Chessmaster 2000 ..... $ 5.00
Ballistix ..... $ 5.00
Goldrunner ..... $ 5.00
Baal ..... $ 5.00
Station Fall ..... $ 5.00
Falcon Firefight ..... $ 5.00
Falcon Counterstrike ..... $ 5.00
Gravity ..... $ 5.00
Dragons Breath ..... $ 5.00
Bad Company ..... $ 5.00
World Games ..... $ 5.00
Championship Wrestling ..... $ 5.00
Tower Toppler ..... $ 5.00
Weird Dreams ..... $ 5.00
Final Assault ..... $ 5.00
Starglider ..... $ 5.00
Star Goose ..... $ 5.00
Tracker ..... $ 5.00
The Pinball Factory ..... $ 5.00
Gold Rush ..... $ 5.00
Airball Construction Set ..... $ 5.00
Red Storm Rising ..... $ 5.00
Quizam ..... $ 5.00
Infestation ..... $ 5.00
Balance of Power ..... $ 5.00
Global Commander ..... $ 5.00

If we can get an 060 running on the Afterburner, then maybe Cubase Audio Falcon would run. There is more at issue here than the 68030/040/060 though. CAF accesses the Falcon Hardware directly very heavily and as such, it would have to be rewritten somewhat by Steinberg. I am not sure that we will ever see this happen, Steinberg is pretty heavily committed into getting VST out on those other platforms.

I would think that we would have better success running Cubase Audio Atari on the T60 with a Yamaha CBXD5. It runs on ST's and TT's as well as Falcons. I cannot check this out for sure, no cartridge port for the dongle as yet....

On the other hand, the Software that comes with the card offers some pretty interesting features that you may wish to look at... It is very very nice. In addition, SoundPool has some excellent Audio products, are comitted heavily to the Atari market and their products will be compatible with this DSP card.

Before narrowing your vision, have a look at the demo software. You might be pleasantly surprised.

>btw- does Cubase Audio have any problems with the '040 Afterburner?

I have heard that if you do a proper AB040 installation with Nemesis that CAF will run. I have not had personal experience with this, we can't keep AfterBurners in stock long enough to test it out thoroughly.

Michael Grove <mgrove@owens.ridgecrest.ca.us> wrote:

>I was just going by what you had stated your personal perference
>was......

My personal preference is based on the type of "tasks" I expect out of my machine. Very heavily graphics manipulation and DTP work primarily. A 1MB card just doesn't have large enough resolutions for me.

I need 4MB video RAM with fast refresh rate and as such the ET4000 is not suitable.

Besides, I own the company and get any perk I want! ;-)

The ET4000 with 1 or 2MB video RAM is very suitable for the majority of owners. If you use a 14 or 15" SVGA monitor, these cards are perfect. If you use a 17" or 20" SVGA monitor, you will love the additional video RAM that the ATi cards are capable of utilizing. It really comes down to the end-users choice of monitor.

>The ET6000 drivers are now supporting 24 and 32bit color?

Yes, apparently so. I have not received a copy yet for testing but will soon.

>Are the drivers able to utilize the complete chipset functions on the
>ET6000?
>(I think it was hardware MPEG decoding).

No, MPEG decoding is not supported yet.

>Very true, but you still maintain ST Low compatibility by having the
>Falcon video modes available. It really depends on what the guy wants
>to do.

Exactly! Isn't it great having choices!?

>Are the drivers priced in the same range as the ATI drivers?

The drivers are special NOVA drivers for the ET4000W32P PCI and as such are priced the same as ATi. The ET6000 drivers are similarily priced. A lot of work has gone into these drivers.

>Computer Direct does have some very competitive pricing.

Thanks for the compliment. I am doing everything I can to ensure competitive prices without compromising the service and support we are so well known for.

>System Solutions and Toads (if they indeed ever had a stock) price to be
>slightly higher. Maybe something lost in the conversion rates:).

Toad is not the North American Distributor as they so announced. In fact, they have never ever received any stock.

System Solutions is a UK company and as such, their prices include a high sales tax (VAT) that North Americans do not have to pay. In North America we are used to seeing pricing before sales tax and are used to mentally adding that tax onto the price. This makes their UK pricing appear higher to North Americans.

I almost hate posting to this newsgroup because I know my mailbox will be stuffed full of unsolicited spam crap in the morning... sigh!

All the best,
Chris @ Computer Direct

2982. Atari for sale, cheap

Newsgroup: comp.sys.atari.st
Date: 1997-05-27 00:00:00 UTC
From: balkcom@jhunix.hcf.jhu.edu
Message-ID: <5mddf7$lr9@news.jhu.edu>
Source record: 121880

I have a Mega 2 ST which I am looking to sell. It's in good condition and comes with a good set of hardware and a huge bundle of software. (I already posted this once but compuserve mangled it, sorry for the re-post)

I'm asking on $100 plus s&h for the whole set of stuff. Respond to balkcom@compuserve.com, since I no longer have time to keep up with this newsgroup regularly. Here's what I have:

Atari Mega 2 ST upgraded to TOS 1.4
640 x 400 monochrome monitor
320 x 200 color monitor with speaker
monitor master for easy switching between monitors
Panasonic kxp1080 epson compatible printer
52 meg Supra hard drive
beetle mouse

Massive software collection included:
(This list is only a sample of some of the stuff)

Applications:

AtariWorks word proc/ spreadsheet/ database
LDW Power spreadsheet
Dbman database
Flash! and Storm telecommunications programs (no modem though)
WordUp word proc.

Programming:

Huge set of manuals, reference books, and programming tutorials, including Scott Sander's Atari hardware/software reference book, lots of stuff on GFA Basic, 68000 Assembly, and some stuff on C and on some of the new hardware and software which came out with the falcon. Also the following software (all with boxes and original reference manuals):

GFA Basic 3.5e
Lattice C 5.5
Devpac 3 Assembler
Also of course ST Logo and ST Basic :)

Games:
---

lots and lots and lots. The abridged list containing some of my favorites:

Dungeon Master (still awesome)
Chaos Strikes Back
Sundog (space trading game from the Dungeon master people)
Amberstar (Ultima-type adventure)
Hero's Quest I
Ultima III, IV, V
International Soccer
TV Sports football
International 3d tennis
Sim City
Populous
Civilizations (no manual, but playable using the online help)
Assorted arcade games (Xenon II, Outrun, Road Raider, lots more.)

Like I said, this is a very short of list of all the things I have. In all, there are four boxes of stuff. Almost all of the software comes in the original box and has the manual and all that stuff. (I've lost two or three of the manuals, but you should be able to figure things out.) The hardware also has manuals for the most part. I've learned a lot from this system and had a lot of fun with it; if I had space in my house I'd keep it alongside my new Pentium Pro 200 just to play the occasional game of Sundog, Dungeon Master, or Populous. You'll have to pay shipping and $100, and promise of course to provide a good home for her :) . Send e-mail to:

balkcom@compuserve.com

or call

2985. Re: New Version of PaCiFiST?

Newsgroup: comp.sys.atari.st
Date: 1997-05-28 00:00:00 UTC
From: Tom Wilkinson <northerner@solarwinds.com>
Message-ID: <01bc6bc7$88e7fc60$8a9557ce@twilkins>
Source record: 121729

There's a new version out right now, as of May 29 according to Frederik's page. (still May 28 here in Canada), so I guess you should check before Saturday. Here's what the new version offers:

New features in v0.44:

- Fixed bugs in video & Gemdos emulation
- Switches to adapt mouse & joystick emulation to some games
- shortcut to make screen snapshots
- Better joystick calibration, various X & Y sensitivities
- MIXED video mode, allowing rasters AND resolution change
- Standard VGA line-mode (if you haven't a VBE2.0 compliant graphics card)
- new bugs... :-)

I haven't had time to finish all the planed things. The next release of PaCifiST will perform an important leap in term of capabilities & compatibility.

>Any ideas etc gladly received.

Obviously, you have net access now, so the question is will you gain anything from it? There are a few reasons to do so, even if you have another access method:

- Your current internet access is through your employer. Some employers (especially in the States) frown upon non-work related internet use.
- You want to learn more about internet software. Since many internet authors are here are the internet and easily reachable, you actually pick up a lot (I'd trust an Atari owner to know something over a IBM PC owner).
- You like working with your Falcon better than your other computer.

Just some thoughts,

Mike White (michael@fastlane.net)

I think the original poster might have been referring to a certain novel by Orwell when contemplating Atari's somewhat draconian threat (I didn't know I risked revocation of my authority to USE the computer if I modified it without Atari's approval...voiding the warranty, I could understand). I wonder if JTS inherited that power...maybe I'll have to rip out the RAM board and AT-Speed from my 520 yet.

> this would you not need two? If not, how do you go about avoiding it?

It would be best, but can be avoided with Linux. Linux is capable of
IP masquerading, a technique that maps out-going connections from the
Atari onto higher port numbers of the Linux machine. For the Internet,
therefore there is only one machine with one IP address, because it does
not know that packets bound for high TCP port numbers are in fact bound
for the Atari.

The technique has certain limitations, this is why I said a second
address would be best, but still it is quite usable for normal traffic.

STinG BTW is intented to implement masquerading in a later version (very
little priority right now, though).

Of course they do ! CPUs for desktop machines has since long been
only a (as I understand smaller) market for Motorola. The MC680x0s
are widely used as embedded controllers too, and that market hasn't
shrunk as much for Motorola as the desktop machine's CPU market.

AFAIK not even the MC68020 has been discontinued ? I might be wrong
here, though.

Hi all,

Recently I bought a TT030 together with a 19" B/W-Monitor
called "Proscreen TT", manufactured from a company called
Protar, but I don't have a cable to connect both.

Anybody out there using these two devices ? Could you please
mail me the wiring scheme for the monitor cable ?

Thnx,
Axel

There is a nice upgrade for the portfolio.

The upgrade is called the Newton MessagePad 2000 and Emate 300.
These upgrade devices can do internet email and webb browsing as
well as wordprocessing/spreadsheets. The upgrade includes near
perfect handwriting recognition..

For more info: //www.newton.apple.com/

Source record: 121886

On 27 May 97 05:32:07 GMT, "David De Roo" <david@reference.be> wrote:

>Can anyone help me to find driver for a ZIP on Atari ST4?

I think what you'll need is a program called HD Driver which is commerical. In North American, try contacting Computer Directs web page, they are in Canada. You'll need a ICD Link II I believe to use this or else a TT I believe. The ZIP drive itself required parity. I know there's been discussions on this here and others have said it WILL NOT WORK with a ICD Link 1. Only with the ICD Link II model which allows the parity.

George, for info, STiNG works great on my 1040STe w/one 720K drive
and no hard disk. I tried for a month to get STiK to work, and had no
luck - I have it working now with information gleaned from setting up
sting.

I can't really say for sure about your problem with Modem 2, but I've
seen quite a few similar posts on Genie that turned out to be a problem
with "ROUTE.TAB" - did you edit it to access Modem 2?

Terry.

3011. NeoDesk CLI v2.2 upgrade

Newsgroup: comp.sys.atari.st
Date: 1997-05-28 00:00:00 UTC
From: Michael Clemmetsen <michael.clemmetsen@sunderland.ac.uk>
Message-ID: <338BFCBF.CB3A2FB9@sunderland.ac.uk>
Source record: 121897

Hi,

Does anyone have the file to upgrade the NeoDesk CLI from version 2.1 to 2.2? This is needed to get the CLI to work correctly with Geneva.

Apparently this is included on the "NeoDesk 3.03 to 3.04 Update Disk" which comes with Geneva, but I never got it with my copy of Geneva.

I've been in contact with Titan Designs (the UK Gribnif agents) to get a hold of the disk, but they have not replied to my last two emails on the subject. They replied immediately to my initial enquiry and even contacted Dan Wilga for further details. So if anyone at Titan or even Dan himself is reading this, perhaps they can contact me.

Thanks for any help,

Michael

I don't see any advantages od buying an optical drive over something
like the Jaz. On the Falcon there are no problems atall using a Jaz or
Zip drive, the Jaz is faster than an Optical Drive for less cost. So
why don't you think people should buy them?

Not sure, but it should be available in just about any atari FTP site.

Try this one for a start:
http://www.umich.edu/~archive/atari/Utilities/Tosfixes/foldrxxx.arc

>
> "Augeas"

It depends on what you intend to do with this machine. The Falcon is definately still the best Music Machine available (well there is going to be a Hardware for the Hades and for loads of money that will beat the Falcon). The Hades has the highest Performance available for TOS-Programs. Even the fastest PowerMac with MagiCMac can not beat it. remember that the PowerMac has to interpret the 68K code; The Hades can execute it directly.

Still I would not buy a Hades 040. What I said about performance considerations related to a PowerMac only is right for the Hades060. The 040 is not much faster than a 040er Mac.

The thing sounds promising. Details would be appreciated.

Anyone know if you can fit the interface and a 2.5" drive inside an original
STE case? I guess a 3.5" is way too large.

BTW, if I try this, and decide to fit a 3.5" IDE hard drive in the place of
the floppy drive, can I set an external floppy drive to be recognized as drive
A ?

This would be useful, as I tend to carry around my ST a lot, I could leave the
floppy at home and run off the IDE HD when I'm off site.

Well, I dont think this will happen, unless someone can convince Steinburg
to update Cubase.

AFAIK the DSP board for the hades is not register compatible with the Falcon
which means that the best they can do is emulation of the xbios, which
most falcon software doesn't use anyway because it is much slower than
using the registers directly (and allegedly is buggy anyway). I have no
idea whether Cubase uses the xbios, but I know that it wont be compatible
with most DSP aware software.

My information is from: http://members.aol.com/stepwil/index.html
which is the StarTrak DSP card page (liked to from Medusa Systems' Hades
page).

Yes the following jumpers are availiable for the STE:-

STE Jumpers:
STE internal jumpers W300 1-2 and W301 1-2
external 14 pin FD connector (as shown in the documentation)
pin 5 Drive Select 0 ---- Floppy disk jumper DS0 (Disk drive A)
pin 6 Drive Select 1 ---- Floppy disk jumper DS1 (Disk drive B)

STE internal jumpers W300 2-3 and W301 2-3
external 14 pin FD connector (the default shipping config)
pin 5 Drive Select 1 ---- Floppy disk jumper DS0 (Disk drive B)
pin 6 +5v via 10K resistor ---- not used

Urgh, why would any self-respecting Atarian buy an Apple/Apple-clone?
Macs suck. All the clones have to use Apple's <ancient> motherboards,
everything concerning Apple is ridiculous.
If I'd right now buy something with PowerPC it would be some
Motorola box. But I'm waiting for the Pios-one. CHRP is the way
to go, sadly Apple tries to sabotage the CHRP concept too.

Apple is the source of all evil.

Please Anthony... remember how much Falcon DSP software was out there "before" the Falcon came out, not very much. It takes time. The card will inspire programmers to write for it, not the other way around. It is a chicken and egg story always.

>Well, I dont think this will happen, unless someone can convince Steinburg
>to update Cubase.

This is very true, I find it unlikely that Steinberg will take programmers off of the Mac and PC VST teams to work on Cubase Audio for Hades.

On the other hand, some very competent programmers are working on Audio solutions for the Hades and StarTrak. Who cares if Steinberg does not update Cubase to run as long as somebody else produces good software for it?

>I know that it wont be compatible with most DSP aware software.

This should read, "it won't be compatible with most Falcon DSP aware software." New hardware always requires new software or updates to the old software. New hardware also inspires new software.

All the best,
Chris @ Computer Direct

My own personal preference and having looked at them in the local
Future Shop I haven't been too impressed by the casing on them
and the feel of the media in my hand when compared to optical drives.
Also there is more to speed than seek rate. I don't want to get into
an argument with you Paul its just my preference.

Well, I don't know what design for the IDE upgrade this company uses. I got my HD fitted by a Polish company (based on a German design) and I do have a 3.5" hard disk inside my ST case, together with HD floppy, 4 MB Ram and TOS 2.06 and there is still an IDE cable coming outside which enables me to connect a CD Rom. One thing that had to go was the inside shielding cover. I am not sure if the Polish company is still in business - their name was Karen (Warszawa, ul. Przemyska 11A), so probably this information doesn't help anybody much - but it still worth to know that it is possible...

As someone that uses a Falcon for my total internet access, including
email, www, usenet and ftp, I'd say a big yes!

>I haven't really used a st/falcon for a very long time, so i'm well out
>of touch with wot can do wot :/

It can do it no problem. A combination of STiK, CAB and Newsie should do
you. If you are a Demon user then Oasis 2 is an option, but it doesn't seem
to work to well on ISP's other than Demon (IME anyway!).

I think you'll find most people here use Ataris for their access, so that's
probably proof/encouragement enough for you to get started! :-)

Best wishes

Mike Kerslake

In article <33877137.11906938@nntp.netcomuk.co.uk>, escher@netcomuk.co.uk says...

> Some ISPs are now filtering mail from the spam domains (eg.
> cyberpromo). Perhaps it's worth asking your ISP if they will block
> mail from these domains for all subscribers. After all, the people at
> the ISP will be getting just as much, if not more, spam than you do.

There is a program that can be used at the ISP level to help curb the spam from CyberPromo and others like them.

As sysadmin for an ISP, I was faced with just this problem, and I found out about a mail routing program called Qmail, which is much more secure, more configurable, has the ability to refuse mail from any domain you choose. It also helps combat Spam by not allowing your site to be used as a mail relay station. This software runs on almost any flavor of Unix, including HPUX, IRIS, Linux, AIX and Solaris (which is what I use...).

I've been using it for 3 months, and Spam has dropped 80-90% to *all* of our customers, and I don't have to worry about hackers getting in thru the mail system now.

For any sysadmins out there, go to http://www.qmail.org for more information...

I do realize that this is off topic, so let me say that I love my Atari 800, and I'm getting a 1040 ST next month. Also, because this is quite off-topic, I ask that any requests about this software be made to me via e-mail instead of the newsgroup. I will be happy to help anyone who inquires about this software!

Hope this helps,
Roger "Merch" Merchberger
Programmer, NorthernWay

Hi All,

This is of interest to all Atari Users, because zetnet.co.uk is one of the main Atari ISPs in the UK, so you all must make sure you address the emails correctly.

I will also draw your attention to the contents of the last paragraph and reinforce Tims statement about emailing

postmaster@zetnet.com.

leslieh@valis.worldgate.com wrote:
: greg_evans@delphi.com wrote:
: :
: : Hi. i just installed Magic 5 and was testing out all my old programs
: : when I ran into a problem with Pagestream. When I try to open a file
: : (load a document) the file selector mask is set to * only instead of
: : *.doc so no files are displayed. I tried to change the mask but
: : could not figure out how. Has anyone seen this problem before/
: : What's the solution?

I do not know Page Stream, but usually, if the prgram handles masks right,
the *,doc mask should appear on the right side of the file selector, where
it acts as a pop up menu. The second posible option is * mask, which is
absolutely OK.

I guess, because of the implementation of long file names, the old mask
. to display all files simply is not suitable any more, as it will
display only files that have a dot somewhere and leeave the other ones
unnoticed. For example, the file
This_is_a_file
wouldn't show up with the setting
., but it does using *

Now, what I think is that you have run into a bug of an early Magic5
version, that is, if a program reserves all available memory, the file
selector does not display anything.
The cure is:

Update to the current version 5.04 or 5.10
or
use limitmem.ttp
to limit the memory for pagestream to some value less than the available
meory (some kbytes are enough) -and again it works.
So no need for an extra file selector.

Regards,

Alfred

1, Not everyone logs on all the time, your message was posted about 10
hours after the origianl, I only downloaded news 10 hours after your
post, I'm sure many people download even less regularly than that and
compose offline adding further delay.
2, I'm sure nobody (including Rich) took offence at the posts which was
clearly written by somewhone not of sane mind.
3, There was nothing in the post that warranted any response, it was
just a crap "song".
4, Following up is clearly how this person gets their kicks, I don't
like the thought of this person getting their kicks from my posts.
5, The only way to respond to this person is by email, they don't
however appear to have the ability to supply one, I'll have to mail the
University Postmaster and ask them if they can pass my messages on.

>when some real problem arrives, you wimp out, you soft wannabe
>moderators...

Well the wanna always have last word you are will tell us how to deal with a troll? Reply in the thread insulting the troller? That's his goal. Mailbomb the troller? Illegal, silly, and he hided his real address. Track down the troller domain and ask his postmaster to close his account? That could be the good way, but he has forged his headers (well it's true I didn't really try). Write a public or private message to support our attacked friend? I don't think Rich needs it really... but... Rich? We all love you! :-)

Cancel the troll? Definitely efficient, but this one doesn't reach the ECP (excessive crossposting) index necessary to be cancelable following the rules... really far, as rules say cancelable if crossposted to more than 400 groups or multiposted to 20 [see PS2]. Well we could sit down on rules and cancel anyway, but this could lead to Imminent Death Of Usenet. One have to be carefull with cancels on content.

Just ignore it, and perhaps put the title in kill file? That's not the best way but that's what I've done.

> You know who you are :(

I'm paranoid or you're talking about me :-).

Bye! Bruno.

PS: Someone could explain me what is a wimp? Don't have it in my Collins pocket dictionary...

PS2: There is a discussion in fr.* hierarchy to consider a troll and all followups as one big multipost. So one can cancel all the thread at the second the thread reaches 20 posts... And cancel automatically all new followups after that, on a 45 days period after the last post. But that's only an interesting discussion, as one have to decide (on content) what is a troll and what is not.

Title: Compute!'s ST Programmer's Guide
Author(s): Compute! Books
ISBN: 0-87455-023-8 (256 pages) c. 1986

Compute!'s ST Programmer's Guide is a comprehensive, detailed guide to programming the Atari ST computer. Written in clear, easy-to-understand language by Compute!'s technical staff, Compute!'s ST Programmer's Guide is packed with essential information, a book you'll return to again and again. It thoroughly covers the ST's many features, from BASIC and Logo to advanced GEM applications. Here's just a sample of what you'll find:

- Detailed descriptions of every ST BASIC command
- An introduction to BASIC programming, with graphics, sound, and file-handling examples
- Detailed explanations of every ST Logo primitive
- A discussion of Logo programming concepts, with special emphasis on Logo's powerful list-processing capabilities
- Survey of the GEM desktop environment, TOS, AES, and VDI routines
- How to write your own GEM applications, with a complete working example written in the C language
- A detailed list of GEM VDI routines, with instructions on how to access them from BASIC

This book provides clear explanations for beginners and a wealth of information for experienced users. How can I use CLEARW, FIELD, or VDISYS? When is Logo a better language to use than BASIC? Can I create my own GEM application without disturbing the normal desktop accessories? You'll find answers to these questions and many, many more.

Title: The Elementary Atari ST
Author(s): Compute! Books/Sanders, William B.
ISBN: 0-87455-024-6 (267 pages) c. 1986

The Atari ST, with its advanced graphics, sound, and programming capabilities, is at the cutting edge of the new generation of personal computing power. While some of its features are similar to the older generation of eight-bit home computers, the ST's power expands those features and adds exciting new ones.
The Elementary ST prepares you to fully utilize the ST's programming speed, easy-to-use graphics, and superior sound with:

- Detailed instructions on hooking up and operating the computer and peripherals
- Step-by-step instructions on how to program in Atart BASIC, with many sample programs
- Tutorials on disk and printer access

Title: Programmer's Guide to GEM
Author(s): Balma, Phillip and William Fitler
ISBN: 0-89588-297-3 (504 pages) c. 1986

The Programmer's Guide to GEM is a detailed introduction and reference guide for anyone wishing to develop applications for the GEM operating environment. If you own, use, or program any computer using GEM--from the Atari ST series to the IBM PC--this is one text you shouldn't be without. You'll gain a solid grasp of the tools and concepts of GEM programming through detailed, function-by-function discussions and clear illustrations. Step-by-step programming examples will show you how to put this knowledge to work. You will design and build a full-featured GEM application--a simple doodling program--using objects, events, windows, menus, alert boxes, and more. Throughout the text, the authors stress concepts and techniques for high-quality GEM programming that are of value to any applications developer:

- Human factors in designing the user interface
- Programming for presentation-quality graphics
- Programming the VDI for truly portable graphics software
- Using the Resource Construction Set for prototyping and easy software modification

Detailed appendices make this the most complete and easy-to-use GEM reference guide for programmers, with

- a detailed GEM glossary
- a complete guide to VDI and AES functions
- a tutorial on the Resource Construction Set
- complete code for the sample application

All programming examples are in C.

Hello all,

Ive been playing around with the Pacifist emulator and like it alot. Ive been trying to find some of my old favorite games to see if they work on it.

One game name escapes me though. It was a game where you kicked these little furry ball creatures across a soccer type field at your opponent. The goal was to get all the furry balls on your opponents side. You also had a bonus round where you kicked the creatures in the mouths of these monsters at different heights.

Anyone remember what the name of this game was? And does it work with Pacifist?

Some of my favorite ST games of old were.

Sundog
Shuffle Puck
Metrocross
The Pawn

Any help identifying the above game would be appreciated.

Yes. The black (ground) leads go in the center, if you have a split
plug).

>The ports I recognize on the left side are:
>
>Keyboard connector (uses a mega-style keyboard - can I substitute my spare
>PC keyboard somehow?)

Not easily. However, you can jury-rig a regular ST keyboard - it
won't be pretty, but it should be possible. Just reverse-engineer the
instructions for connecting a Mega keyboard to a plain ST/Falcon.

>?? A small female port. No idea on this one.

Appletalk LAN port (RS-422 - balanced RS-232, basically).

>Two RCA style connectors - I'm assuming audio-out plugs?

Yep. Stereo.

>Joystick 0 + 1

Nope. Those are serial ports. The joystick ports still come from the
keyboard. There's a third serial port on the motherboard - it
connects using a PC-standard 9- or 25-pin male plug with a ribbon
cable and 10-pin female header.

>ACSI port (will my ICD Host adaptor work? I hope so!)

Yes.

>Above the parallel & ACSI: Serial 2. I'm guessing this is the "enhanced"
>serial port I've heard about. What happened to the normal serial port? I
>don't see another one..

Ah. Mentioned above. Use Modem2 for most modems.

>Looks like an RF output port similar to the one on my 1040FM??

Yes.

>As well, there are a few unfamiliar sockets on the board itself:
>
>Empty, labelled "spare1" and "spare2" to the right of the SIMMS (assuming facing
>from the front)??

That's what they are - spares. Unused in the final design.

>I've read that only DIP switch 7 does anything?

I seem to recall that one fo the others disables DMA sound but I see
no point in that.

>Another empty socket: U405 about 2 inches behind the SIMMS?
>
>I guess the empty square socket by the 68K is for a 68881?

Yepper.

>I'm assuming the port at the top right side is for the internal floppy?

Also correct.

>Also, I thought this was supposed to have a VME bus slot? Where is that?

Should be attached via a dual ribbon cable near the center of the
board. Not real useful, considering the cost of VME card devices.

>Any other important things to be aware of with this machine? New video
>modes (I know it has 4096 colours). I know about the better sound - is there
>a list of what's changed somehwere?

No new video modes, but the sound will be better with any program that
can handle the DMA sound system.

>I would prefer email, but I'll read this group as best as I can.

j> set of English docs for the newer ST-Guide? Or can you help me get
j> it working? I had the older (English) verson working fine, but it
j> won't load .hyp files created with the newer versions. Thanks to all
j> in advance for your help!

I've checked out a few things before replying to this, but I think the solution is rather easier than I thought after a first cursory reading of your message.

There's a line in your STGUIDE.INF file that reads:

```
#######
# This file will be loaded automatically if ST-Guide is started without
# parameters:
DEFHYP=C:\GUIDES\ST-GUIDE.HYP
#######
```

I believe that your only problem is that you've got this set to KATALOG.HYP without actually having one. Set it as shown above and everything should come back just fine. Alternatively, just drop any other HYP onto STGUIDE.APP and it should also load just fine.

Secondly, wrt STTOOL, you'll need various setting to be in place in STGUIDE.HYP and also (preferably) a KATALOG.CFG file with appropriate settings. I'd take a chance anyway if you don't have an STTOOL.HYP file to tell you what's needed and just run STTOOL.TOS and you'll get some form of KATALOG.HYP created, I expect.

Finally, you can grab STGUIDE v1.5 in English - dated 10.12/96 - from Joe Connor's Interactive Web Page at:

http://www.cix.co.uk/~inactive/

I hope all that helps...

Maybe you could try looking at the Quick FAQ (URL in my .sig).

A complete list of FTP sites can be found at Hallvart's site at
http://home.sn.no/~hallvart/pages/atari_ftp.html

A pretty good Atari shareware sequencer is Alchimie. It can be found at the
umich ftp site. Sweet 16 is another one that is still supported. You'll find
it on Hallvart's launchpad

Side note: if you have just bought an STF, you should read these groups often!

> Falcon clone, rather a TT clone.

Yup and that is enough to make the decision. :-)
A TT is fast but boring. A Falcon isn't a speed freak but realy realy fun to
use, especially if you like ot od some programming.

> This is something everybody has to decide for themselves. I have customers
> with 256MB in their DirecT60 and they want to add more. For some of our
> customers, 1 MB DRAM ET4000 video cards are plenty, others want 4MB VRAM

Cool. I would like to see someone using a T60 with 256 RAM and do some
serious stuff with it.

> There is a DSP card (with dual DSP ports) in final construction. It
> provides both Analog I/O and Digital I/O via SPDIF optical or coaxial. It
> comes bundled with a very very nice professional Audio Mastering software.
> Up to 99 tracks and real time DSP effects on 16 tracks along with 16 outs
> via dual DSP and 2 Jam OUT 8's or FA-8's.

Sure but you forget to say that the DSP card costs as much as a brand new
Falcon! You can get a used Falcon for less than the DSP card cost. I do also
think that the DSP is extra?

The Hades does not either have DMA sound like the STe/Falcon/TT so if you havn't
got a soundcard for it you are back at STFM level.

> SoundPool is working to ensure that their hardware and software products
> are compatible with Hades and the DSP card / sound card. In fact many
> SoundPool products have been tested with success.

That's cool. Do you know anything about Cubase Audio?

> So, if you plan on doing Audio work, the Hades is starting to look like an
> excellent choice.

Sure if you have got the money. With a Falcon you are up and running in
minutes and can add more stuff as you go.

> Upgrading a Falcon to an 040 and adding a graphics card etc. is another way
> of going. To compare the speed difference is unfair. The Hades has a much
> faster bus with wider bandwidth, faster RAM read/write and is much more
> expandable. In my opinion, the Hades is more stable than the Falcon with
> Afterburner.

That's not completely true either. With the AB040 you get local 32-bit Fast-RAM which isn't much slower than the one found in the Hades. It's true that the bus to ST-RAM in the Falcon is slow but as most programs uses Fast-RAM it's not a big problem. Running raytracers and applying filters/effects in graphics programs are about as fast as all the calculations are performed in Fast-RAM. POV running on the AB040 is as fast, if not faster than on the Hades040.

And that the Hades should be more stable might be true but then it must be _rock_ solid. I havn't got more problems with my falcon now than I had before fitting the AB040. It's actually very stable I hardly never have a crash these days even then running MagiC as I do every day. I do also use it for programming and it even doesn't crash then and you should see my code!

:-)

> Have a look at Atari Computing Issue #5 for our advert. to compare pricing.
>
> As far as Publishing and imaging go, the Hades with 68060 is faster than
> the Afterburner when used with software that utilizes the DSP in Falcon.

Yup that is correct but the Hades hasn't got the same amount of programs to choose from and it _doesn't_ have Apex 3.

> The Hades uses a slightly modified version of TOS 3.06. It is very stable
> and can be upgraded easily. In fact, we have had upgrades on this TOS
> already. It is not a "new" TOS and is very much "tested".

There isn't realy any problems with TOS 4.04 either and we have got MagiC.

:-)

> Hope this helps you in your purchasing decisions. Join our mailing list to
> get a better feel for these new machines. Info on joining can be found at
> http://compdirect.com/directions

Fair enough. But don't forget that we Falcon owners has got people like Doug Little and only that is worth getting a Falcon. Also don't forget all the cool software that is available for the Falcon only and it gets only better and better. And the games! Take a look at Running and Willies Adventures. You will _never_ see those on the Hades. And don't forget the trackers, demos. etc. etc.

The Falcon is a h*ll of a fun machine if you ask me and if you can get your hands on a used one, GO FOR IT.

:-)

Does anyone know the reason of a min. 3 cm of bottom margin on my HP
Deskjet 510 with a A4 page format ?
I can print with a top margin of 0,5 cm but I can't print under the 3 cm of
bottom margin.
This problem does exist with all applications under NVDI 3.x or other printer
driver.
I use the HP 500 printer driver but I think it isn't a software driver problem.

Any idea ?

Thank you

I would also suspect the memory and not the monitor it self. It sounds like
you have got to slow memory. An EDO SIMM should fix it.

Hello,

I'm sorry to have to write this but the program seems to be getting
worse instead of better. Maybe not for Falcon/MagiC/other gismo
owners but yes, on my old 3Mb, HD- and Zipdrive equiped 1040ST with
SM 124 mono monitor not much can be done anymore with wensuite.
Selecting About... in the first menu results in three bombs since
version 1.70H and again in 1.70I.
The PPP connection is disabled since version 1.70G (clicking on
connection does nothing anymore) Is this a bug in the mono version of
the recourse file?
In the versions 1.70 D to 1.70F I could at least let the modem dial
and managed twice to get a connection without being able to do
anything with it. All the other tries failed while the modem
disconnected as soon as the ppp chat started.
In version 1.70H tables were really a mess. The preveous situation
has been restored in 1.70I, allthough still far from perfect, tables
again are readable.

Has anyone been able yet to make a real ppp internet connection with
wensuite, maybe someone who bought the unlimited version?

Ok heres a question for all the regulars of comp.sys.atari.st

If someone posts a question asking for help, about SPAM on there
ATARI they get moderated, if someone can't spell right they get
moderated, theres lots of other examples where the WANNABE moderators
jump in with there pathetic rantings,

Yet when one of our most well respected ATARIans gets attacked, you
all keep quiet...thats because you are all soft, you really are wimps,
all you so called wannabe moderators moan at your fellow ATARIans, but
when some real problem arrives, you wimp out, you soft wannabe
moderators...

You know who you are :(

Very Decent of you :)

1) Whats the average attendance figures,
2) How long is the meeting usualy on..ie: half day..weekend?
3) Is there a Bar.. (most important <G>)
4) Is Venue close to a train station,
5) What machines will be available,
6) Will the Car Park be full of Tractors hehehehehehehehehe

I am in Accrington Lancashire so this is the nearest thing by the
sound of it, If its just a simple train Journey?...

Cheers !ynoT (ATARI Programmer)

The original post showed up in all the atari related newsgroups. I haven't seen it in comp.sys.atari.st in my regular newsfeed yet. Maybe it has been cancelled somewhere along the line.

This is a hit and run troll. No doubt that the asshole posted his nasty attacks and will never show up again, so there's no use in starting a thread about this. There's nothing wimpy in that.

A complaint has been sent to postmaster@news.ewu.edu, from where the original post seems to have originated, but then again, the header was probably forged.

Besides, I don't think anyone want this group to be moderated. There are rules to usenet netiquette that sometimes need to be pointed out. That's not moderating.

I believe you need a separate GDOS driver for each DPI and paper
type.

If you have Pagestream, enter "a4" in the Special field and increase
the page dimensions correspondingly, both in the Printer Setup
dialog.

3091. CAB/STiK Help Needed

Newsgroup: comp.sys.atari.st
Date: 1997-05-29 00:00:00 UTC
From: main@appstate.edu
Message-ID: <864915582.16814@dejanews.com>
Source record: 121772

I recently bought a Falcon030 and have been trying to get connected
to the internet via a SLIP connection. My setup info is below:
TOS 4.04 (singletasking)
HSMODEM
STiK 1.12
CAB030 1.5
CAB.OVL030 1.25
I can connect to my provider seemingly w/o a problem. Once connected,
I start CAB and can go to SOME webpages and they will load. However,
after my initial page is loaded, I'm stuck! If I try to go
another page, CAB gives 2 bombs and dumps me to the desktop. Sub-
sequent tries at loading CAB fail with a screen lockup. If I cold-
boot, I can reconnect to my ISP and start CAB and load one page
again. Also, most sites I try to connect to either freeze or bomb.
Notably, I cannot connect to Altavista. Any help and/or experience
anyone has had with this would be appreciated. Thanks

Thomas Main
main@appstate.edu

Can't you just change the paper size somewhere (2/3/last menu? - it's been a while since I last used pagestream. You may find that you need to change some settings on the printer - perforation skip springs to mind.

IIRC I didn't have this problem on a DJ500 a while ago. PS: Use FPRINT or a similar program to achieve a fourfold increase in speed!

judging from what I saw at TUS's booth at both UK Atari shows, the
idea is to install the 2.5" drive inside the case around the middle of
the mother board. Installing a 3.5 should be possible if you're willing to a)
do some major shield and case cutting (apparently there's a few Falcon
owners who've managed to shoehorn a 3.5" drive inside the case, or b)
replace the top with a DeskTopper (which has provision for two drive
bays).

Doesn't the ST's operating system require it to find and recognize
the floppy drive before it will proceed any further in the booting
process?

Believe me, Tony (and this is the first I've seen of this particular post, the original not having shown up on my account), if I had seen the original post, the little weinerhead would've been done like dinner and his net account would've been black, dead, and radioactive by nightfall :) .

(BTW, any ideas on who sent it? I have three ideas on who it might be, judging from the content - a meow spammer, Chris Rozier <an especially odious net.abuser Rich was helping me to extricate from alt.tv.simpsons a few months ago, who's prone to making scatalogical content like the above> or of course out favorite loser SinClap, who has proven on many occasions that he has it in for Rich.)

If I get a fast IDE drive for my 14meg Falcon, can the machine itself support 8-16 tracks of audio or do I need to stick to SCSI-2? Thanks for your help.

I suppose you have not seen Mac OS 8 yet comming in July?

Motorola does have PPC boxes called the StarMax line.

With Virtual PC , OS2 and Open Step efficiently at near Pentium
speeds
efficiently. The program alone takes up less than three megs of
storage..

However, the 040 Hades cost many times over than a fast 240mhz
PowerMac at $1599!

The May issue of MacFormat has a demo copy of Cubase in the added
CD. According to the publishers, no extra hardware required to use
it. So a fast modern PowerMac is a much cheaper solution that the
over priced and underpowered Hades..

Apple hasn't sold 040 Macs in years...This is the mid 90's..

>a commercial level, at least... (unless the software is to be priced
>highly, which again adds to the cost overhead of the machine).

Obviously we are dealing with a smaller user base and this does not allow
the economies of scale prevalent in other platforms. But, this has been the
case for many years, even before the Falcon was released.

There are many projects under way for the Hades, many I simply cannot alude
to.

I just had a sense of Deja Vu. When the MegaSTe came out, we had similar
comments from users. My old software will not run on it, it would be
cheaper to buy an old ST and add an accelerator card.. etc. This again
happened when the TT came out and again when the Falcon came out.

I think that there is a predictable pattern here. ;-)

>Admittedly, if I had a hades then I would try and code for it, but
>most 'hackers' like myself couldn't afford a Hades/DirecTT + DSP board?

This is always the case with new hardware, some people can afford to buy
the latest and greatest, others wait until they can buy one used somewhere.
Obviously there would not be any "new hardware" developments if the
majority of people were in the same situation as yourself.

>Serious audio users will not choose a Hades / T40/T60 + DSP board over
>a Falcon with just a promise of software, will they?

Of course not! Likewise, they didn't buy into the Falcon until substantial
product became available.

On this note, I should mention that several pro studios that we deal with
have looked at the StarTrak demo and like what they see and will buy into
this machine just for that software and card, never mind the DSP card or
any other future solutions that may come to fruition. The StarTrak card and

software have the majority of features they use daily and the speed and display of waveforms is much better than what they are using now.

>>On the other hand, some very competent programmers are working on Audio
>>solutions for the Hades and StarTrak. Who cares if Steinberg does not
>>update Cubase to run as long as somebody else produces good software for
>>it?
>
>True - we could do with a new modern sequencer... but thats a big task,
>and I wonder if it is commercially viable?

It is viable, otherwise we would not have StarTrak or SoundPool developing for it.

There is absolutely nothing wrong with ordering or owning a Falcon. Hey! We still sell them and sell more of them than the Hades based DirecT machines. This will change eventually though. When the Falcon was introduced, it took two years for it to catch up with our then 1040 sales... The Atari market is unique in this respect. On the PC market, when a new processor design is released, sales of the older ones drop very fast. ;-)

>How hard would it have been to provide register level compatibility?
>Do you know if there are plans to write Falcon XBIOS compatible drivers?
>This would make it compatible with some Falcon software...

You will have to ask Stephan Wilhelm about this, he designed it. He must have technical reasons for doing so.

On other matters...

Halvard had posted a message that I forgot to save. In this message he questioned the post I made in regards to the Hades having faster and wider memory access than Falcon with Afterburner.

To clear up the confusion on this part. The Hades has faster and wider memory. It does indeed use 72 pin SIMMs 32 bit, however, it resp. to 64 bit when using the memory interleaving option. The result is faster than the fastest TT RAM or Falcon TT RAM upgrade.

A Hades 040 with memory interleaving, EIDE hard disk and PCI Graphics card will outperform a Falcon with Afterburner 040 on all functions except DSP.

A Hades 060 will outperform the above even on functions utilizing the DSP in the Falcon.

An example, JPEG slideshow with ImageCopy. The Falcon with 040 and using the DSP wins this close race against Hades 040 but not Hades 060.

If Halvard would like technical docs on this machine, I would be happy to provide them.

All the best,
Chris @ Computer Direct

Well, IDE sucks anayway, but the bottom line is that you need a
socalled AV-drive, a harddrive that doesn't move it's heads from the
position you stopped recording (or whatever) to a parking-track. As
far as I know, AV-drives only exist in SCSI.
Another great advance SCSI has is the fact that multiple SCSI-devices
can act simultaniously, as each device has it's own controller. This
why CD-writers aren't available in IDE.

3110. Software support

Newsgroup: comp.sys.atari.st
Date: 1997-05-30 00:00:00 UTC
From: david@ritter.demon.co.uk
Message-ID: <37550651_000008_OASIS_NEWS@ritter.demon.co.uk>
Source record: 121493

<Pence Worth 2>

Over the past few months there have been several compaints about support from programmers for registered users. (One just recently on demon.ip.support.atari) so I thought I would have my say on the subject.

In the past year or two we have been treated to some outstanding pieces of software, equal to if not better than a lot of offerings on other platforms:- Cab, Oasis, Everest, Thing, Texel (Ok this is commercial but is still a great program from what I can tell by using the demo), then theres popwatch,newsie,telnet vt102, STiK (and now STing), aFTP. (hmmm net software appears to be a recuring topic here!)

The best way for this to continue is to show your support to the authors by registering the software. Ok maybe you should be entitled to some form of support in returning for registering BUT the best form of support available is right here in this newsgroup, which correct me if I'm wrong is the main atari newsgroup. If you just state the problems you are having you are almost guarenteed a large number of answers/solutions to the problem(s)

One factor that was recurent in the posts that complained about support was the users emailing the authors. This is just fine if it is to give them support but if they are to continue producing such good quality software they just do not have the time to respond to every request for help. After all most (all?) atari programmers write atari software in their spare time, it is not their primary career and as such can only dedicate a certain amount of time to doing this. If they were to respond to requests for help from everyone then the time they could give over to actually developing software would be greatly reduced.

I know it is frustrating not being able to get certain pieces of software working, such as sting in my case ;-) but rather than flame the authors would it not be better to give them support? either by registering the software if you can thus encouraging them to solve any problems which arise (problems which I'm sure they are probably aware of through their own testers) Flaming authors will only discourage them from continuing with their product.

so before you send that flame/complaint stop and think about the service that these programmers are already providing. Without them the atari platform would really be dead and buried. With them we are still alive and kicking.

Ok end of ranting :)

</Pence Worth>

3114. Help with TOS chips please?

Newsgroup: comp.sys.atari.st
Date: 1997-05-30 00:00:00 UTC
From: dzander@solaria.sol.net
Message-ID: <5mnuf8$d6g@solaria.sol.net>
Source record: 121497

Hello All,

Today I recieved 6 TOS 1.4 chips from Systems for Tomorrow but no instructions. The chips are labeled L0,L1,L2,H0,H1,H2. They were rearranged (scrambled) in the case they came in. My question is, do I just place them in this order (L0,L1,L2,H0,H1,H2) in my computer? Actually, they are labeled like this:
C300787-002 H2
C300788-002 H1
C300789-002 H0
C300790-002 L2

They could have at least used the correct spelling for St. Louis
(instead of St. Luis). They were referring to the city in Missouri (I
saw the picture of the Gateway Arch), not some other person/place/thing.

Casper, your opinion, shall we say, is generous compared to mine. I'll
leave it at that.

Depends on what software your using. If it is Cubase Audio 16, then you must use a SCSI device for recording (it will play back from IDE). If you are using one of Sound Pools apps, then you can use an IDE. Best take a close look at the software you wish to use. The Falcon itself can do both types of recording.

```
For sale:
Syquest 44MB external SCSI drive w/ 9 disks. This is the standard for
transporting files to service bureaus, or for backups, and the drive is
very fast.
The cartriges are formatted for Mac but can quickly be reformatted for IBM
or Atari or any other computer that speaks SCSI.
The disks sell new for about $75 each. I have nine of them.
I am asking $250 for the whole bunch INCLUDING the drive in external case.
email japolis@mindspring.com or call Jeff at 303-473-0511
```

No Atari, Apple, Commodore, DEC, Handheld, HP, etc. stuff (actually not any computer stuff) to be found there what so ever, just a bunch of pictures of 'the outside' (augh! the light, no computers! no net! I'm melting....)

The buttons were hard to understand I assumed incorrectly uou click on the blue thingis below the names to go to different pages, wrong. Also takes forever to view if you have a 14.4k modem.

Post back here to us when you get some good computer shots, ok.

Yep, allways the same trouble with a hp 660.
I think it's a pinter hardware problem ;-)

>This problem does exist with all applications under NVDI 3.x or other printer

Your transfer with HSModem to any bbs looks allways ok?

>I start CAB and can go to SOME webpages and they will load. However,
>after my initial page is loaded, I'm stuck! If I try to go

Right, i found some pages with a 100% quote to kill CAB / also CAB 2.0
(But i think it's more a question for CAB_OVL and STiK)
After that i remove STiK and retry the same page with STinG, same OVL, same CAB
I a few seconds, i see the url of that page at my topline the data transfer/cab
stuck or i see 2 bombs. My next retry with Mac/FreePPP2.5/Netscape catch the
same page in 5 seconds completly. (Frame page)

I think it's not a problem of CAB 1.5 / 2.0, but one of the .OVL

>boot, I can reconnect to my ISP and start CAB and load one page
>again. Also, most sites I try to connect to either freeze or bomb.
>Notably, I cannot connect to Altavista. Any help and/or experience
>anyone has had with this would be appreciated. Thanks

AltaVista works allways fine, but it's very slow in the early night.
Make sure you have free ram enough for cab/cache
(That was my problem i startet with cab)
(watch your reserved memory in your default.cfg)

(Disk full?)

good look :)

>How the hell did you get 3Mb in an ST ?
>
In 1991 I bought a memory expansion card in Germany, called Ramcard.
This card containes 2Mb of Ram and with a special trick they managed
to add these 2Mb to the already existing 1Mb, which makes 3.
Additional hardware makes this memory act like 3Mb normal memory
without any restriction. As you know, memory was quite expensive at
the time and the choice was to buy 4Mb and throw away my own 1 Mb, or
buy 2Mb and get three.

That's it :-)

From: bjr@Edison.EbiCom.Net
Message-ID: <5mm4f9$ta7@einstein.ebicom.net>
Source record: 121708

I personaly just ignore it...
If it's a post that I'm not interested in, no big deal, I just pass on by.
Let'um gripe if they want....I don't read those either.

Thoe I can understand that some are annoyed by off topic posts, I usually find that many of them are enlightning. I.E. there was once a long thread about BEOS or some such Motorala based OS that's in development. It ticked a few people off, but I kind of enjoyed following it, and in this case, it was a topic that doen't really have a news group of its own, so where's the harm in cross posting it to various groups to see where it gets response from?

Personaly, I like to think of Atari.comp.st as a place where "Atari Users" can share insight about anything they wish. The machine can create an interesting bond amoung people...and that concept to me is more exciting than the idea of limiting all talk to specific Atari questions and answers, of which half get flamed because the poster didn't take time to hunt down some FAQ or something. That's the nice thing about a news group like this. Rather than doing an archie or WWW search for an FAQ, you can interact with people, and exchange ideas and favors. It's healthy for those who choose to be a part of that kind of interaction.

The way I see it, if someone doesn't like the idea of people being people, and interacting over sometimes very stupid topics, then such a person might consider moving away from news groups, and towards WWW pages and FTP sites for their sources.

As far as protocol...the only threads that really bug me are the those that begin to get unplesantly PERSONAL. I can usually see all sides of the argument, and often wonder why such threads aren't taken into private. But then again, who's to judge? I simply quit folling those threads.

Brian

True, but most programs don't change perforation skip. I can't remember
what PageStream prints but I don't think it changes this setting (not
that I expect it to help :)

The DJ can't print on the last 0.5inch of the page as it has to keep hold
of it!

Well, initial reaction to this idea is favourable, so I will discuss it
with our distributors and see what we can come up with.

>(In case you check up on this, and discover that I am not yet a
>subscriber - chalk it up to my procrastination - I have been meaning
>to send my dosh to Rich T but life gets in the way :)

I know what you mean.

But in all seriousness Atari Computing really does need all Atari fans to
buy the magazine on a regular basis. Although the current circulation is
acceptable, it really could be a lot better. We sell about 1600 copies an
issue ATM, but there must be more than 1600 Atari users in the world!

So I appeal to all Atari fans to put their hand in their pocket and
subscribe to the magazine. The more people that do, the more chance we
have of keeping a lively Atari scene going worldwide.

The weird thing is that the French and German language Atari magazines have
a much higher circulation figure than the English language ones. Yet,
there's definitely more English-speaking Atari users than German or French
ones!

Your vote, or rather your subscription, counts!

Best wishes

Hi,
Could someone please send me a printer driver for this printer:

Epson LQ-100

as I want to make use of it's extra functions, it must be compatible with
either 1st Word or 1st Word plus, I would prefer 1st Word plus.

thank you for having the time to read this.

Kevin.

>inspire programmers to write for it, not the other way around. It is a
>chicken and egg story always.

True, but how many of these cards do you really expect to be sold? 500?
I heard there are only 900 Hades in existance (treat as un-confirmed rumour)
- but even if this figure is way too low there will not be a high enough
number of programmers and/or users to make it worth developing for - on
a commercial level, at least... (unless the software is to be priced
highly, which again adds to the cost overhead of the machine).

Admittedly, if I had a hades then I would try and code for it, but
most 'hackers' like myself couldn't afford a Hades/DirecTT + DSP board?

Serious audio users will not choose a Hades / T40/T60 + DSP board over
a Falcon with just a promise of software, will they?

>>Well, I dont think this will happen, unless someone can convince Steinburg
>>to update Cubase.
>
>This is very true, I find it unlikely that Steinberg will take programmers
>off of the Mac and PC VST teams to work on Cubase Audio for Hades.

Yes, seeing as they wont even do that for the existing Falcon versions (AFAIK).

>On the other hand, some very competent programmers are working on Audio
>solutions for the Hades and StarTrak. Who cares if Steinberg does not
>update Cubase to run as long as somebody else produces good software for
>it?

True - we could do with a new modern sequencer... but thats a big task,
and I wonder if it is commercially viable?

>>I know that it wont be compatible with most DSP aware software.
>
>This should read, "it won't be compatible with most Falcon DSP aware
>software."

How hard would it have been to provide register level compatibility?
Then there would have been the possibility of Falcon compatibility...
(I assumed the reason a 5600x series processor was chosen was for
Falcon compat [there are better DSPs out there], but then to map
registers differently seems really wierd...)

Do you know if there are plans to write Falcon XBIOS compatible drivers?
This would make it compatible with some Falcon software...

> New hardware always requires new software or updates to the old
>software. New hardware also inspires new software.

True...

Anthony

Hi everyone,

I'm still looking for a possibility to connect my Falcon to a BNC or UTP network, using tcp/ip or something. I've heard there does exist a BNC-network-adapter for the Falcon and it should be from Germany, but I'm not able to find any network-adapter. Anyone having suggestions, please react.

I'm kind off new in this news-group, so I will introduce myself shortly. I'm a electronics-student at the university of Twente in Holland. My Atari is a Falcon030, 14MB RAM, 2.1GB SCSI-2 HDU, 4*speed

3150. seebaer 0.23 beta released

Newsgroup: comp.sys.atari.st
Date: 1997-05-30 00:00:00 UTC
From: michael@ghf.augusta.de
Message-ID: <HE5MEAAFUP@ghf.augusta.de>
Source record: 121722

Hallo to all atarian`s

I've released a little tool for the ATARI.
it`s name is "Seeb&#65533;r" or "Seebear" in english. This program is only useful
for MagiC or MultiTOS/N.AES-Users.

You can watch how long your computer was turned on. there are two litte
programs (~1000 Byte) who watches about the start and the shutdown of your
computer, and writes all into a protokolfile.

Then you can start another program (22 kByte) which shows you in 8 diffrent
statistiks how long your computer was turned on.

1. The average of minutes every hour the day (0 - 23)
2. The average of hours every day in the week (Monday - Sunday)
3. The average of hour every month in the year (Jan - Dez)
4. The count of the shutdown, the resolution changes and the uncontroled
"fall downs" of the computer.
5. The count of the duration of a seasson (<1min - >24hour)
6. The minutes every day your computer was turned on
7. The minutes every week your computer was turned on
8. The minutes every month your computer was turned on

The Program is today only avilable in german, but there isn't much text, so
i think ohter people can use ist without problems.

I'm, searching for a translater who want to translate the german resource
into an english one.

For all people who want to take a look at this program, here is the adress:

the program itself: http://www.augusta.de/~michael/seebaer.zip
or with german text: http://www.augusta.de/~michael/software.html

Greatings Michael

Things can't be that bad if you're able to connect to the first site Ok. I'd take a lok at your minimum RAM settings and/or the amount of free disk space you allow on the partition that holds your cache. That's as good a starting point as any...

Perhaps you don't have the name server set correctly.

You could try a dotted decimal IP address (one that looks something like
123.456.78.9) and see if that works any better. This might help to
determine where the problem lies.

You could also try some other app (other than CAB) and see if you get a
similar problem or not - this would help determine whether the problem
lies with CAB or with STiK.

Hi everybody.

What is the best way to install an external SCSI ZIP drive on my Atari
STE?
( SCSI ID for external SCSI ZIP drive is limited to 5 and 6 ).

I'm receiving the following printout during reboot of my Atari STE
when ZIP drive is connected to the SCSI bus.
-------------
Atari Hard Disk Driver
AHDI v5.00 Dec 03 1991

ACSI devices:
Unit 0 - Quantum ELS170S
Unit 1 - Not Responding
Bootloaded
DATAlite 2.16@1993 LogoLex
Quantum ELS170S
-------------

Thanks, Richard
```

There should be no problems really, you may need to make sure that only the device at the end chain is terminated and make sure that the hard drive is supplying "Term Power". I have hered that AHDi needs to have the SCSI IDs in order (ie 1,2,3, etc) so this may be a problem. If this is the case you should invest in a new HD driver.

Title says it all - how do I SPAM block postings to usenet? Quite a few contributors to csas use some system to conceal their addresses from those 'distinctly unwelcome people' who trawl usenet collecting addresses. Is this software only with a direct IP connection, or can it be done via those 'anonymiser' sites thingies!?

Cheers

Martin

I have a similar problem that no-one as yet has given me an answer
for.As with Cory I I get the message "resolving host" and the URL
title then nothing. BUT this is not with ALL URL`s only a few.

The funny thing is that an URL that I cannot get direct I CAN get
by using a Link from another page. This of course makes things very
longwinded and rather difficult if I dont know of a Link to the
one I want. Ideas are most welcome.

: Depends on what software your using. If it is Cubase Audio 16, then you
: must use a SCSI device for recording (it will play back from IDE). If
: you are using one of Sound Pools apps, then you can use an IDE. Best
: take a close look at the software you wish to use. The Falcon itself can
: do both types of recording.

: Mike
If the IDE is rated fast enough (10ms/2Meg throughput) I can use it for
Logic Audio? I knew about Cubase only recording to SCSI, but I just
wanted to make sure that there wasn't anything in the Falcon itself that
slows down IDE access/throughput. I love my Falcons, but their designs
can sometimes run contrary to logic. No flames, I don't even _own_
another platform<g>!

Does anyone know if there is a notator converter. I mean is there
something that will convert a Notator .son file to either a MIDI file
or something else.
I have a lot of Notator files with complicated patterns and now I must
save each pattern as a MIDI file and past them toghether in cakwalk
..... it is a pain ......

Thanks

Can someone e-mail it to me? It's a desktop accessory that lets you choose printer drivers and horizontal/vertical printing. I can't find it anywhere.Anybody have a clue what I'm talking about? I think it came out circa 1989.It was written by Tom Hudson.Thanks.

-Satcom2

p.s. I'm not being lazy, I looked hard for it, it's not even on my Atari Gemini shareware CD.

Claude,

As another TT user, I have had the exact same experience.
Peter seems to think that it may be the Resolve.STX module.
I have tried everything that he has suggested, but no go.

Fortuneatly, STiK is works fine with my ISP, so for now
everthing is OK, but having a working PPP stack would be
real nice :)

On another note the latest version of WebSpace's PPP stack
seems to work fine on my TT - its to bad the rest of the
program doesn't measure up...

Regards,

Steve Hammond

Yes,- you can use it on your desktop, but you have to edit the DESKICON.RSC file.
This is done with a editor like ZOOM.APP, or someting like it.

ZOMM is a commercial program, I don't know of any PD or shareware that will do
the same.

From: dipching@ping.be
Message-ID: <5mreeg$6ke@news1.Belgium.EU.net>
Source record: 121553

Hello to everyone,

I'm happy to announce that my web site has changed again.
The modifications are:

-A lot of pictures have been removed from my pages, so it's now virtually
as fast as light speed to download them ! People prefer not to take
too much time to downlaoad, and above all in Europe, time is always
money when talking about phone bills !!!

-The following pages have been cut in more parts to avoid long
download time:
* Atari pages: each subject is now on a seperated page.
* Tibet pages: two independant pages (further new pages will come).

-Most of the pages are now 'full screen' readable at a 832*624
resolution. So there is no more need to 'scroll' inside the title
pages.

-A brand new page has joined the Atari pages, it's the Ultimate T.O.S
Software Index, let's have a look to this very long list of programs
links. At this time, there are about 200 programs available for
download.

-The game 'find the dipching' has also been removed, I think not so
much people was trying to find the hidden secret page.

-Tibet page has been corrected, a lot of links were faulty links, and
also I have to add a few new links.

I really hope you'll enjoy these changes.
You are always welcome for any comments.

Hi! I failry new to newsgroups, but it seems a good place to ask. I have a friend in London who tries to get connected to internet via Caompuserve. When I visited him last week it seemed that compuserve did onlys upport PPP connections. Is that true or is anybody here connected to the net via an atari connected to compuserve?
He wants to use STiK (or STiNG if it gets its ppp-connectivivty done right)... CAB and newsie (nice program).
Help wouold be much appreciated. My friend is soon moving to south africa and we really want to stay in touch through internet.

It is actually cpable of 19200bps and is supposedly abale to be boosted
by a small bit of hardware but that never worked for me.

> 2:If I hook up a printer with Epson and Ibm modes do I need a printer
> driver ?

No, you may not be able to get the best out the printer if it is a
modern high-resolution model. But by the sounds of things it is a dot
matrix which should be absolutely fine.

Gee, does it really say that? What model does that manual cover? Anyways,
nope, thats not right-you can get 19200 easily from any ST with a standard
external modem. You can even add the RSVE serial port upgrade and get about
38400 for only $59.00 from Toad Computers. It does involve a teensy bit of
of soldering but I was able to do it on my Mega 4 ST so that means just
about anyone can! :)

3209. DirecT40/60 kits Re: Hades or Falcon ?

Newsgroup: comp.sys.atari.st
Date: 1997-06-01 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <33916682.0@lagoon.idirect.com>
Source record: 121563

here's an interesting bit of news regarding the DirecT40 and
DirecT60 that'll be of great interest to the Atari community:

Subject: Support Lists DirecT40/T60
From: Chris Krowchuk, support@compdirect.com
To: Support Lists DirecT40/T60

Build Your Own TT Clone!

May 15, 1997. Edmonton, Canada.

Do It Yourself Kits for Computer Direct's Powerful new TT Clones are =
now available!

Yes! Now you can build your own super fast DirecT40 or DirecT60 Atari =
TT Clones using our simple to install kits. We make it easy for you!

Customer feedback has been instrumental in the development of these =
kits. Now you can build it yourself using locally available parts. =
The heart of every DirecT40 or DirecT60 is the custom motherboard. =
This ultra modern system is designed to conform to the worldwide ATX =
Form Factor standard utilized by the PC compatible manufacturer's. In =
a nutshell, this means that this motherboard fits into any standard =
low cost PC style tower or desktop case. Go ahead, pick a case, any =
case!

Our kits are so simple to build!

As a mimimum, we supply you with all of the cabling needed and a =
motherboard with a pre-installed, tested and burned in CPU. Choose =
from the super fast 64MHz MC68040 or the ultimate Motorolla CPU, the =
spectacular 120 MIPS 60MHz MC68060! The CPU is installed in a LIF =
socket for easy removal and installation thus allowing DirecT40 =
owners to upgrade to a 68060 in the future!

Go Configure!

Simply add any standard PC keyboard, floppy drive, EIDE or SCSI hard =
drive, 72 pin memory SIMMS and an ISA or PCI Graphics Card of your =
choice!* Plug in your favourite Atari mouse and start enjoying the =
fastest Atari computing experience available! truly Plug and Play, =
not Plug and Pray like other platforms! All of these peripherals are =
readily available at a low cost from any PC store.

*Software drivers are needed for Graphics Cards. Currently supported =
cards include Tseng Labs ET4000 W32, Tseng Labs ET6000 W128, ATi Mach =
64 VRAM Winturbo. Other drivers are in development.

DirecT40 kits start as low as UKP =A3799, $1299 US or $1799 Cdn. and =
include Motherboard, Cabling and 64MHz MC68040 CPU with heatsink. =
Installed, tested and burned in.

All prices FOB Edmonton, Canada ex-tax and are based on the exchange =
rate at time of preperation of this press release. Foreign currencies =
are provided as a courtesy. Actual transactions are in Canadian =
funds. Canadian residents add 7% GST.

- AdSPEED 16 MHz 68000 accelerator. Socketed. Speed switch on
back of computer for hardware switching. Includes QuickST II
- TOS 1.04. Six chip set.
- 38400 Baud harware mod. Soldered in. Switch on back.
- Z-Keys hardware IBM remote keyboard interface. Not installed
- All UNDER THE RF SHIELD! It all fits. I had to do some
modification, but it is clean. NO heat problems.
- Includes left-handed mouse, all original manuals, and assorted
other stuff that came with it.

AdSCSI HD controller,CDC 170 Meg, Seagate 80 meg in custom $100 OBO
pizza-box case. Matches Atari color and size.
100 Watt power supply. Includes cables. Professionally
assembled. No bad sectors.

Supra HD controller w/ DB-15 to DB-25 cable. $BO

SM-1224 Color Monitor. No burns. Reliable Goldstar model. $50 OBO

SM-124 Mono Monitor. Video comes and mostly goes.Goldstar.AS-IS $BO

Astra SW-2 Monitor switch. This is the GOOD one that switches $25 OBO
the POWER and video. Front switch for power. Also a
switch for audio. Audio out. Video out jack for STFM's.

Spectre GCR with some software and ROMS. Versions 1.9F and 3.0 $50 OBO

UIS III V. 3.0 and II v. 2.0 Universal Item Selector. W/manuals $BO

Flight Sim II Color. With Manuals. $BO

STart magazine Disks. Spring '87 through May '91. No mags $BO

140 or so blank Sony 720K bulk disks. Mostly low or no usage. $BO!

TERMS: You pay shipping. All items are working unless otherwise
noted, but all are sold AS-IS.
Prepay or COD. Other arrangements possible.
Better deals if you buy the whole mess. (preferable)

Thanks for your time.

3211. "What Is TOS?" URL Changed

Newsgroup: comp.sys.atari.st
Date: 1997-06-01 00:00:00 UTC
From: nroughley@unix.dsoe.com
Message-ID: <5ms5u9$i89$1@news.gt.ca>
Source record: 121565

For those who have links to my "What Is TOS?" Web page, the URL has now changed from:

http://www.axionet.com/excel/tos.htm

to:

http://www.excelprinters.com/tos.htm

Quite a few new graphics (Mega, STacy, ST Book) have been added since my last posting here. Unfortunately (ironically) with the account change, CAB users will not receive any graphics due to HTTP error 406: CAB.OVL can't communicate correctly with the Windows NT webserver software used at this site.

The old URL will still be working for a week or so.

Regards.

:). Sometimes I can't find the switch...

I purchased my TT card direct from Aixit. They kept me posted on the order and shipping progress, and were very prompt. I highly recommend if you can purchase the item from them, do so. It is a very clean card design. I wish they would make a few more things for the Falcon and TT.

Hi all :-)

Just a short question:-

Is there program out there that will do with a Mac and ST what
Ghostlink does with a PC and ST? i.e. Use the Mac as a
vertual drive through the serial port. Thank you :-)

Please reply by email, I don't get on here often! :)

>I suppose you have not seen Mac OS 8 yet comming in July?

No I haven't, but what has that to do with anything? Or is
Mac OS 8 CHRP compatible? I'm having hard time to believe
that after reading some Apple's announcements.

>With Virtual PC , OS2 and Open Step efficiently at near Pentium
>speeds
>efficiently. The program alone takes up less than three megs of
>storage..

I haven't seen Virtual PC in action, and only heard about it
once before this. Is this vapor-ware or is it available
to public right now? But if it does what I've heard, it'll
be cool (assuming it ever gets ported to non-Apple OS).

>> Apple is the source of all evil.
>I thought it is Wintel!

So did I until I started following CHRP stuff a bit more closely.
Wintel is bad, but compared to Apple it's an angel ;-).

>> Sinclap's arrogant style. I don't see Sinclap's stupid signature
>> there... so you are not the Sinclap you pretend to be.
>Because I am using a free net set up now..

So you say. Prove it. I've heard rumors Peter Sincrap has become
a born again Wintelian and doesn't hang in Atari areas anymore.

>complete (and latest version) package?

<URL:ftp://ftp.fu-berlin.de/atari/mint/mintnet/net/net-1.01b.tgz> is I
think the latest MiNTnet version, source code is net-1.01s.tgz in the same
directory. AFAIR it's the version included in PPPKIT14. If you want a
complete package with MiNT and all utilities there is KGMD there in
directory atari/mint/contrib-package/kgmd-1.0/ and you can find English
install kit KEMD2 at <URL:http://www.primenet.com/~kellis/>.

>Please leave PPKIT14 out, as I've tried several times over the course of
>the last week to set it up, and no go-too many errors.

Which errors? If you explain us your problems someone here could
perhaps help you.

>are most of you MintNet Guru's using your entire hard drive and using
>Mint as your primary OS, or are you using one Mint-partition only?

I choosed PPPKIT just because it allows easy use of MiNT, MiNTnet and
CAB without special partition as I haven't much free space on my disks,
and I boot MiNT nearly only for CAB browsing. When I'll buy a new disk
(surely a JAZ) I'll dedicate a partition for Minix file system and try to
install the KEMD2/KGMD kit to use all other MiNT goodies and GNU C, but I
think I'll never stop to use TOS as primary OS...

BTW your sig is bigger than the text of your article, the Netiquette
recommends no more than 4 lines for a sig...

Bye! Bruno.

>it seemed that compuserve did onlys upport PPP connections. Is that true
>or is anybody here connected to the net via an atari connected to
>compuserve?

It's true that Compuserve supports only PPP and not at all SLIP
protocol. And I'm connected to the net via an Atari connected to
Compuserve. The only problem with them is they don't have POP3 servers so
you can't receive directly Internet mails, you have to find a POP3 mailbox
somewhere else. In fact another newsserver too, as news.compuserve.com
can't really do the job correctly...

>He wants to use STiK (or STiNG if it gets its ppp-connectivivty done
>right)...

Not possible now, sorry.

>CAB and newsie (nice program).

Possible only with a MiNT and MiNTnet setup and Gluestick or the
cab-for-mintnet overlay. He could use PPPKIT14 for an easy setup of all
this.

If web access is not necessary, he can access to all other Internet
services with NOS and a mailer/newsreader on top of it, like Oasis 1.35 or
soon Okami... news, mail sending, ftp, telnet, finger, etc...

Bye! Bruno.

I have the same problems with providers that doesn't support Slip.
Make you shure that your provider supports SLIP and not only CSLIP or
PPP.

>
>ACSI devices:
> Unit 0 - Quantum ELS170S
> Unit 1 - Not Responding

>Bootloaded
> DATAlite 2.16@1993 LogoLex
>Quantum ELS170S

What's that??

SCSI SCSI SCSI
Atari DMA/Host->SCSI Unit0 / ID0 Unit1 / ID1 ZIP ID 5(6)
#####----##############--##########---##########---########## <- Terminator must be ON!

First: AHDI stops scanning devices if it found a 'hole' between the scsi-id's
(And you have a big hole between Unit 1 and your new ZIP (ID5 or6)
AHDI is free, sure, but old and slow.

Use HDDriver for a successfull harddrive access ;-)
(Not only for that, also you have access to passwort, write protected and also)

regards, robert

3225. Quantum again

Newsgroup: comp.sys.atari.st
Date: 1997-06-01 00:00:00 UTC
From: tom.derrick@acpu.com
Message-ID: <865176053@acpu.com>
Source record: 121579

Hi, everybody. I am posting this for a friend. I can't remember the details of which Quantum hard drives are iffy on the ST.

My friend had a 'Lightning' 730Mb that worked great until it died tragically during some experimentation with other drives (don't ask; he embarrasses easy). Quantum was nice enough to replace it, but with a 'Fireball' 1Gb unit. I was able to partition this new one using ICD and my TT's scsi bus, but his Mega STe will not recognize it; neither as an internal drive nor hanging off his Link 2 on the DMA port. We've tried all the jumpers (there aren't many - just termination and scsi id). Anybody know what to do next?

On a related note: there is a surplus dealer here in Boise, Idaho, USA who has lots of 1 Gb HP 'Coyote' drives in nice compact cases with power supply, SCSI ID switch, and 50 pin 'Centronics' in and out connections. He sold one to my friend for $130US, I partitioned it (0 bad sectors), and ICD RateHD shows 15 ms access time, ~1700kb transfer on his Mega STe using the Link 2. A bit noisy, but solid as the Rock of Gibralter (I've used mine for over a year). This dealer also has bare drives ($100US).

And another note: when my friend called Quantum tech support, the clown who answered went ballistic when he heard the Atari name, and after he unwound about that, went on to state that he would also be pleased when the last Mac was dead and buried. He obviously wasn't working for the Public Relations Department. Or Sales.

"The Poor Deluded Soul" - tderrick@acpu.com

... Life would be easy if we had the source code.

From: wanda@xnet.com
Message-ID: <5mt2lo$mu8@flood.xnet.com>
Source record: 121631

I am not having good luck with STinG with Newsie. I get slow response
and often when I click on an article instead of Newsie displaying
the article, I get another overview screen. This doesn't happen
with STiK.

I'm running a Falcon030 16 Mhz.

I also prefer STiK because it runs as a desk accessory instead
of having to start a program and then exit before starting up
a TCP/IP application.

For me, for now, STiK is the winner!

6-1-97 >>>>>> [][] ATARI Clearence SALE [][] <<<<<< 6-1-97

I have accumulated quite a bit of atari stuff! I didn't realize it was
that much until I moved into my new place, and found I didn't have room
:) So it's time to thin out the less used items.

Item : Complete System
Computer : Mega 4 w/ 4mb RAM and TOS 1.04
Monitors : Monochrome * AND * Color w/ Monitor master
Monitor Models : SM124 and Goldstar SC1224 w/ manuals
Software : Over 100 original games (100's of disks?) plus misc.
Comments : utils. Also includes joysticks, a mouse ...
Comments : 2400 baud external modem and the mega4 has the original
box and manual!

Includes whatever programming manuals/software that I might have that
you want. In short, if you want more (asside from the Hard Drive) w/o
paying more, (FROM MISC AREA ONLY) I'll pry throw it in
(depending on what it is)

Asking : $275 + shipping

Item : Complete External Hard drive setup
Host Type : ICD Link
Megabytes : 139mb formated
Type Case : Plus Impulse flat case
approx size: 13(width) 2.5(height) 14.5(depth) (inches)
Comments : Includes DMA cable, Power cord, ICD software
Comments : Plug 'n Play - Autoboot w/ICD
Asking : $150 + shipping

If you want something from the Misc area, i'll pry throw it in -
depending on what it is.

[-][-][-][-][-][-][-][-][-][-][-][-] [-][-][-][-][-][-][-][-][-][-][-]
M I S C
[-][-][-][-][-][-][-][-][-][-][-][-] [-][-][-][-][-][-][-][-][-][-][-]

If you want something listed below - make me an offer!

Item : ATARI LAZER 'adapter' box. I can't remember what these are
called.
Comments: But they are the boxes that plug into the computer
and the lazer printer plugs into this box. Comes with the
Lazer printer cord. And 1 DMA cable (as it's built into the
box) This box also has a DMA pass-threw.

Item : 6 (?) MFM hard drive mechs.
Comments: I don't know what works, and what doesn't. They all did work
when I put them in the box, but I cannot test them at this
point.

Item : Blitz Cables
Comments: Allows you to backup your software fast and easy!

Item : ST Sound Digitizer
Comments: Made by Hippo, includes software and cartridge

Item : Video 1000-ST
Comments: Includes Cart and german (paper) docs. Screen rez enhancer (?)

Item : Video Key
Comments: Lets you hookup your atari to a TV

Item : Mouse Master
Comments: Lets you click over between a mouse and a joystick on 1 port
(usually 0)

Item : 1040 power supply
Comments: Needs plug put back on (which I still have)

Items : SwitchBack
Comments: Difficult to explain what this is. This lets you save anything
to RAM or a file. (Not the best explanation, but best I
can do)

If you have any questions, or your interested in one of the items

b>
b> How the hell did you get 3Mb in an ST ?

There's an article in a back issue of ST Applications describing this
(original article in a German magazine).

It's a small circuit that allows the use of the bank of memory that is
normally disabled when you add extra memory, but it can lead to "pinholes" in
the screen display.

Direct from Aixit.

I don't think that there is a UK distributor yet.

Be warned that I am having some difficulties wrt floppy disk access when run under MagiC, and beware of lack of headroom if you have a memory upgrade that uses an MMU clip (assuming that MMU is behind the processor). You'll need to fit a number of IC sockets as spacers if so.

This version of AHDI doesn't support non-consecutive ID numbers. You need to
grab AHDI v6.05c or v6.061 or try one of the newer drivers (ICD, HDDriver,
CBHD, SCSI-Tools etc...)

Ist. Word drivers are nothing special - they consist of a table compiled from a text file which assigns printer codes to modes which 1st. Worg understands.

If you have the 1st. word kit you should find some .CFG text files in the folder PRINTERS and a program INSTALL.PRG which makes the tables. You can edit the text files to include the modes you require and re-make the .HEX table.

Hi, George

I'ts easy to import the icon file into a resource editor.
I have edited my 'ICONS.RSC' (for Thing) quite a lot by now.

I use 'WERCS' which is a resource editor delivered with
the Lattice C-compiler.

Another alternative is 'RCS30' which you can find at Hallvard's FTP-site.

Enhance your desktop!

There are plenty of internet solutions for the Atari. However, world wide web applications usually require at least 1Mb of RAM (Your 520 has only 512Kb unless it has been expanded).

This is what the Atari ST Quick FAQ (see my sig) says:

4.2 How can I hook up my ST to the Internet ?

The ST can be used to send and receive email, read usenet newsgroups, download from FTP archives, and even to surf the web.

There is a whole lot of internet resources on the subject, among others:

The Atari Internet guide
http://zippy.spods.dcs.kcl.ac.uk/~garfield/aig/aig.htm

The Atari Connection
http://www.cedep.com/~gstamant/atari/atanet_e.htm

The good old Atari ST FAQ
ftp://ftp.sn.no/user/hallvart/atari/info/n_faq2.txt

Internet Software for Atari
http://localhost.ruhr.de/~sacha/index_e.html

The STiK support page
http://www.flinny.demon.co.uk/

There is no upper limit because TT and Falcon both support SCSI-2 drives
right from the start.

> Don't forget this is (for that i know) a SCSI-1 port, not a SCSI-2 like Falcon...

The TT supports SCSI-2 as well as the Falcon. Only the port consists of
a different connector, that's the only difference.

I'd rather keep the original case. It's more compact to carry around and it
actually LOOKS like an Atari, not a PC! ;-)

What bothers me is the SIMMs on the STE that might interfere. I think I'll
have to see if I can fit the drive anyway.

Good point! I didn't think about that one. Can anyone with a harddrive tell me
if the ST boots on the HD even if no floppy is attached ?

J.H. Sonnemans' EPS-to-CVG converter works well. It's commercial and is
available from DMC Publishing. Only the low-level vector information is
converted, though (no support for embedded bit-images and some of the
'fancy' 3.0 stuff). Supports CVG 1.0 and 1.1 (color) formats.

There's also a Norwegian shareware EPS/AI converter called ECVerter (the
destination format is CVG as well). Do a search for EPSXCVG.ZIP or
EPSXCVG.LZH.

Your best bet might be to find a copy of Pagestream, which has
extensive Postscript support and is inexpensive now.

It is easy to add a icon.
Copy the icon from the programs RSC file and add it into the desktops RSC file.
You can do this with for example Interface.
Then reboot or if you run N.AES reload desktop icons.

Mega
> STe motherboards for only $59.00! :)

Well by reading the message I can only assume this:

A Mega STe case is required, maybe to rehouse an existing damaged one or to
move into one, maybe from a standard STe. I am assuming this because of
the following words:

good cosmetic condition - this suggests to me that the casing must be in
good nick and therefore required;
buy a dead Mega STe - this suggests to me that the internal components
aren't a big issue, and also a way to get a cheaper case with spare parts
if needed.

I don't know where you could get one in the US but I reckon you could get a
brand new case from this country quite easily.

Kev.

Source record: 121650

Tony asked...

1:It says in the ST manual that the RS-232 port is only capable of 9600 baud. Can that be boosted with software ? Is it actually more caoable than that or whats the deal.

ANSWER: The ST serial port can go upto 19200 bps without special hardware modifications. The old control ACC only did upto 9600 bps on its setup, but if you use FLASH set it up for 19200 if you have an external 14400 bps one, that is what I use.

2:If I hook up a printer with Epson and Ibm modes do I need a printer driver ?

It depends on the program you are using. If you are just doing a straight text dump, I would say not. But if you are using Timeworks 2 (DTP) you would follow the instructions for setting it up.

Nick, when I installed the DeskTopper with my Falcon 030, I did a couple of
other things at the same time-like move my floppy into one of the front bays
(as well as going to 14 megs of Ram). Anyways, I checked everything as I
went by booting up. What I'm trying to say (in my usual concise manner :^))
is that I booted up at one point with my floppy drive disconnected, and it
booted up just fine. This is a Falcon with TOS 4.04 however...so I can't
say about other versions of TOS on the ST... Seems to me that it should go
right to the hard drive, no problem... Hope this helps and good luck! :)

Source record: 121654

I need to get hold of a ANSI C compiler that I can use on my 1024 ST, I have
come across GCC, but as the main bin files are 1.2 meg, I can not see a way to
transfor the file from my PC to my ST with only a 720K floopy disks.

If anyone can help please mail me at 'M.G.Beckly@cms.salford.ac.uk'
Thanks.

: sizes?

Choose any of the Speedo (and with v. 5.0 probably True Type and Post Script fonts will work too), instead of the system font.

The system font is a bitmapped font, and so is only available to CAB in the few sizes it was created in. The other font formats listed above are outline fonts and NVDI (or SpeedoGDOS for those that don't own NVDI) will render the font on the fly at whatever size it is needed.

Greetings all!

I've put a mailto form in my webpage that generates an email to me.

I've done it this way because my server doesn't want to expend processor time on me processing the usual formto file.

He says I have to write a small program to strip out the garbage characters and put in carriage returns.

Is there such a little program out there? Anyone willing to write one for me in, say GFA Basic and provide me with source? I can email a sample message generated by the form if anyone is interested.

Thanks for the help!

Right. Thought about that, but the motherboard deal is so good I just thought
I'd pass it along. If I was looking for the case only, I'd probably start
with Best Electronics. Brad has just about everything! :)

3. EXHIBITION
4. HACKER CONVENTION
5. SEMINARS
6. OTHER ACTIVITIES
7. GENERAL RULES AT THE SHOW
8. WHY SHOULD I ATTEND NAS?
9. HOW YOU CAN FIND OUT MORE

Dear Atari friends,

It's once again time for the Nordic Atari Show, the annual get together
which has rapidly become a fixture for all Atari users.

Third time lucky, so they say, and as we arrange the show for the
third straight year we hope to fulfill everyone's expectations and that
this will result in the best possible atmosphere. We've gotten a certain
amount of criticism, both positive and negative, from those who have
attended the shows in '95 and '96. We've taken heed of the suggestions
made and we're once again off and running!

1 - WHEN AND WHERE?

This year the show will begin on Friday, June 13 and end on Sunday,
June 15. This is the weekend following the beginning of the summer school
holidays as well as the weekend prior to the Swedish Midsummer
celebrations. We'll open at 12 p.m. on Friday and close at 6 p.m. on
Sunday.

NAS97 will be held at a school called LUNDBY GYMNASIUM at HISINGEN, GOTHENBURG. Hisingen is a large island very close to the main parts of Gothenburg. There are a lot of local transportations there.

A map for the route description can be found at www.tripnet.se/sak/nas

GOING BY TRAIN
The train arrives at Centralstationen. Take tram 2 (destination Biskopsgarden) at Nordstaden and get off at the stop Rambergsvallen. Signs will lead your way to LUNDBY GYMNASIUM.

GOING BY BOAT
Boats arrive near the tram stop Masthuggstorget. Take tram 3, 4 or 9 to Brunnsparken, then change to tram 2 (destination Biskopsgarden) or 5 (destination Lansmansgarden) and stop at Rambergsvallen. Signs will lead your way.

GOING BY PLANE
Take the airport bus to Centralstationen. Follow the instructions as under "going by train".

GOING BY CAR
Please have a look at the map, LUNDBY GYMNASIUM is nearby a large road and should not be hard to find.

2 - WHAT WILL IT COST?

If you intend to attend all three days, you cheapest solution is the Three Day Pass otherwise a Single Entry ticket will do:

* Three Day Pass ... SEK 150:- (about UKP 12,75)
* Single Entry ..... SEK 80:-

These prices include full access to all the activities being held during NAS97.

3 - EXHIBITION

The exhibition hall is open:
Friday 12-18, Saturday 11-20 and Sunday 11-18.

At the exhibition you can see:

DISK1 (Sweden)
Will be showing Jaguar games and other fun stuff for Atari.

Daggskimmer/Tom Thomason (Sweden)
Bo Leuf and Tom Thomason will be demonstrating Papyrus, Interface and other shareware products. Tom will also be handling registrations for those.

Peter Segerdahl
One of the authors of Zero-X, the fantastic sample editing program, shows how to use Zero-X the best way.

Thorsten Butschke (Germany)
As last year, Thorsten is here and showing and taking registrations for

shareware products and the magazine Atari Computing.

16/32 systems (England)
Nic Harlow has always been at NAS, so why any different this year?
He's showing CD:s for Atari, games and more.

Line Audio
Roger J?nsson shows the different JAM products and more for the musican.

SAK and SAK/Skane
The Swedish Atari Users' Association and the local department in Skane are here too, to show different programs and computer systems in action. SAK will sell T-shirts, PD-disks, have a soldering corner and a swap meeting too for those who whises to sell, buy or trade single items of interest.

4 - HACKER CONVENTION

Demogroups and other programmers can gather for competitions and swap demos and all kinds of code. NoCrew is the Swedish demo group who will see to it that everybody takes part and enjoy themselves. Those of you hungry after rewards in the form of prizes will be well taken care of. Exactly WHAT prizes these will be hasn't been established, as yet.

These are the competitions:
Wild compo
Unlimited demo compo

More detailed information will be sent out to all demogroups by NoCrew. You can also make contact directly to them at their homepage at www.nocrew.pp.se

5 - SEMINARS

Last years seminars were very much appreciated, something of which we naturally have taken notice.

The SEMINARS will be held from 12 p.m. on Saturday and hopefully some of them even on Friday or Sunday. But - please attend on Saturday if you don't want to miss any of them.

- Peter Rottengatter
- About STiNG and Internet
Peter is the author of STiNG (the follow-up to STiK), and he will talk about installation and practical use of this program, plus some general talk about Internet and software for Atari.

- Martin Graiter
- Hardware seminar
Martin is a hardware specialist with long practical experience repairing and servicing Atari computers.

- Mille Babic
- HTML and Internet access

Mille will talk about HTML, and show how this cryptical language
really works. He also gives a lesson about going through the net,
practically, with you Atari.

- Claes Holmerup
- The hardware behind digital recording
Claes was here last year also, and talked about digital mastering.
Now he shows a bit more about all that hardware that's required
to make a digital recordning. Claes will also show how CD burning
can be done with an Atari computer.

- Rolf Johansson
- Layout with Calamus SL
What is Calamus SL, and how can one use it? Rolf shows how the
club magazine is done, special functions and regulars in
the software plus a bit about the new version SL96.

- Ulf Hogberg, Rolf Johansson and others
- General Atari Questions
We will also have a little "chat" seminar where you can ask questions
about everything - and we'll try to answer them. Maybe this also
can become some form of a debate, we don't know right now. Please
attend, as we might need you help.

6 - MORE ACTIVITIES

* Minor competitions such as "A-Z on the Keyboard" (a much appreciated
contest last year), hard disk throwing (this year it WILL happen!),
network games, juggling, etc. Everything depends on our finding
volunteers to act as game leaders and referees. There will be prizes
for the winners.

* A refreshment stand will sell non-alcoholic drinks, sweets, chips,
etc. We CAN arrange quantity discounts at the local pizzeria, and
will take orders for this.

* Internet cafe, with possibilities to surf on the Internet, chat,
telnet or whatever that is legal. The cafe will be nearby the
"normal" cafe, or refreshment stand as written above.

7 - GENERAL RULES AT THE SHOW

* No smoking inside the building or by windows and doors.

* No alcohol, beer or anything like drugs will be tolerated inside
the show. Please have fun with that outside in the city, but not
at NAS97. All such things found will be confiscated.

* Keep a good attitude against other people and show your tickets
to the staff if asked for it.

Anyone breaking these rules or acting violently will be thrown
out of the show.

8 - WHY SHOULD I ATTEND NAS?

The answer is simple: because you care about the TOS platform. We Atari owners are becoming fewer and fewer and a get-together like NAS is a simple way of seeing what's happening in the Atari world (no, it's not dead!) and meeting like-minded Atarians and hearing what kind of tips, ideas and visions they have.

9 - HOW CAN I FIND OUT MORE?

Information will be distributed regularly in the same way as this text file. In addition, we have a number of other sources of information where you can find out more about the show depending on your own resources.

* Our mailing list (e-mail). This will provide the very latest information to those on the list. To have yourself put on the list you MUST have an e-mail address. Send us a message on "nas-users-request@tripnet.se" with "subscribe nas-users" in the body of the text. Don't forget to include your e-mail address.

* Our home page on the World Wide Web. This has been in existence since last year and we'll try to update it as often as the information for the mailing list. The home page will contain more detailed information concerning times, schedule of events, directions on how to get there, competitions and housing.

The address is "www.tripnet.se/sak/nas".

* STraight BBS. This is the Swedish Atari Club's home BBS. Information concerning NAS will be included in the SAK menu. You can also use this BBS to ask any questions you may have. The telephone number is: +46 31-336 39 73.

* Our club magazine, "AtariMagasinet", will contain adverts with more detailed information concerning NAS97 in issues 1/97 and 2/97. This is the largest mailshot we will send to our (SAK's) members.

* Our show co-ordinator is Rolf Johansson. He's supposed to know everything there is to know about NAS97. If you have questions to which you've been unable to get answers anywhere else you can send him a message at "rojo@tripnet.se" and you'll get your answers. If you wish to get into direct contact with him, he can be reached on his mobile phone on +46 70-669 52 35.

KEEP THE TOS PLATFORM ALIVE.
WE ARE LOOKING FORWARD TO SEE YOU AT THE NORDIC ATARI SHOW 1997!

Source record: 121669

MB>And when the computer is probably about 20 times faster than the
MB>Falcon anyway,

The Hades040 won't be 20 times faster than a falcon (perhaps when benched with GEMBench :-). The Hades060 maybe. I'd never buy a Hades040 because it is too expensive. You'll get a cheaper Mac with a 68040. The Hades060 is fine. Or an Power-PC 604e with 250 MHz :-)

Regards
G�tz

Message-ID: <199706022059.a18677@ka2.maus.de>
Source record: 121672

JD>Is this a problem with my mac, or is it MagicMac not fully emulating
JD>the ST floppy drive?

Yes. MagiCMac is not an emulator. I'm sorry, but you'll not be able to run old ST games except those which are using GEM (with some exceptions). But most of the games do dirty tricks which won't work on MagiCMac.

JD>Formatting disks within MagiC also fails at the very end.

Which program did you use? MagiCDesk and Kobold 3.5 work fine.

JD>Anyone have any ideas or pointers that would allow me to mount .msa
JD>and .st files on MagiC's desktop

No way. You must use MSA (Magic shadow archiver) to write *.msa-files to disk - with an ST/TT or Falcon, I don't think MagiCMac will work.

Source record: 121673

```
JH>I need to use the new (German only) version of ST-Guide to read some
JH>.hyp files.

First, 1.4 is not the latest version - use 1.5 instead (Dec 12 1996).

JH>"? ST-Guide <KATALOG.HYP> Konnte Nicht geoffnet werden"

"Can't open <katalog.hyp."

JH>has an umlat (sp?) over it

Umlaut :-)

JH>but there is no KATALOG.HYP file in the archive for the .inf file to
JH>find.

Change the "HYPTOP=" entry, and katalog.hyp won't be a problem any longer. Or
create one: just set all your paths correct in st-guide.inf and run stool.tos
(or katmaker.tos from Christoph Spengler, which is much better). This creates a
katalog.stg file. Now drag this onto hcp.ttp (if stool won't call hcp itself)
and you'll get an katalog.hyp.

JH>I had the older (English) verson working fine,

Then just use the st-guide.inf-file from the older one, it'll work.
```

Regards
G&#65533;tz
(with umlaut :-)

I have a TT with a monochrome monitor (a Sigma Designs
"Laserview" LDM-0019). It is physically identical to a
third-party monitor that was sold for the TT, but I cannot
remember the brand name it was sold under in the Atari world.

I had to build a cable, using a DB-9 serial cable and a DB-15
connector for the TT video output. The wiring is as follows:

pinout for db9 -> db15 cable for ECL monochrome monitor
to Atari TT

DB9 DB15

1 -> 4
2 -> none
3 -> none
4 -> none
5 -> 13
6 -> 15
7 -> none
8 -> 10
9 -> 14

2 & 3 9 & 10
shorted shorted

Of course I make no garantee that this will work for you. But I
would be surprised if the cable pinout was different from one
TT-compatible monitor to the next. (Someone please correct me
if I am wrong).

Hope this helps.

Yves

So, is there an upper limit to the size of SCSI-2 drives?

>And you can easily hit the (n)ext button. The spam discussion is
>pertinent to the Atari community. If you don't like that, tough.

Hum, discussion about spam is surely pertinent to the Atari community
on the Internet (as to anyone having a mail or Usenet account), but if
there are no specific questions (like "how to make a kill file with
AtariNOS" or "which Atari POP3 client to use to avoid UCE downloading?") I
think there is a better place than this group. Well a group is what people
do with it, but here is an extract from a newsgroups list:

comp.sys.atari.8bit Discussion about 8 bit Atari micros.
comp.sys.atari.advocacy Attacking and defending Atari computers.
comp.sys.atari.announce Atari related hard/software announcements. (Moderated)
comp.sys.atari.programmer Programming on the Atari computer.
comp.sys.atari.st Discussion about 16 bit Atari micros.
comp.sys.atari.st.tech Technical discussions of Atari ST hard/software.

It's just a matter of respect for other persons to follow the Usenet
community rules. Anyway everybody is free do do like he wants, this group
is not moderated.

Bye! Bruno.

I'm using a Toshiba 1.08gig 2.5" IDE drive in my Falcon, but I'm
getting along great with ICD PRO hard-drive software. Why do you need
to use "HD Driver" or "SCSI Tool"? Have you tried ICD and found it to
be not compatible with your Toshiba???

Hi there,
I've just aquired some old Mega-ST's with a couple of 30 and 60 MB
Megafile Harddisks and one SH205. Some of these disks won't spin
up anymore :-(
I wonder if it is possible to get any RLL or MFM Harddisk running on a ST.
I hooked up a known good Microscience HH-1060 RLL-Drive (1024 Cylinders,
5 Heads) on the ACSI <-> RLL-Controller which was in the Megafile60 case.
then I launched the AHDI driver (Rev. 6.0xx).After the Disk made some
strange noise, the driver exited with 'Media description unavailable'.
After that I ran HDX but this program didn't found a valid harddisk.

I got the same error with spare Seagate ST277R, ST250R and Micropolis 1385
HD's lying around here.

Has someone ever successfully formatted a 'non Atari' RLL or MFM Harddrive
on a ST?
If yes, how (What drivers, formatting software etc.)?
It would be nice if I could run my old 280 MB RLL-Disk on this machine ;-)

Thanks in advance,
Martin.

Source record: 121439

I recently bought a Falcon030 and have spent the last week getting it connected to the internet. I tried both STiK and STinG and so far I have had more luck with STinG, although I think I will retry STiK and keep both setups handy on the hard drive. The main internet application I want to use is CAB, but so far, the results have not been promising. Here are some of the main problems I have encountered so far:

* AltaVista's page only displays properly SOMETIMES, other times part of the page is missing or it comes through jumbled.

* AltaVista doesn't start to load until about a minute after its address is entered, it then loads in about 2 1/2 minutes :(

* Dejanews doesn't work because the lengthy links get truncated and its server reports a syntax error when trying to access newsgroups or conduct searches.

* CAB sometimes crashes after a link is chosen that was obtained from an AltaVista search.

* CAB crashes for no apparent reason and the system must be rebooted (happens on pages that sometimes work ok)

* Graphics are sometimes appear scrambled, sometimes come in ok.

Are these results of CAB performance typical? Does anyone have a really stable connection? Is CAB a viable WWW browser?

I am not knocking the efforts that have been made in Atari internet connectivity...I realize these programs are largely produced by individuals in their spare time and I was not expecting Netscape quality performance. However, I think that I will stick with using my Atari to run terminal programs and access the internet via a shell account until the performance of CAB can meet my minimal expectations. I would, however, like to hear from others using CAB/STiK/STinG and compare how they think CAB is doing...I might need to tweak more.

Only one solution: HDDriver!

But, if you're short, you can get a short programm called AHDIConf
who will tell AHDI which ID he must scan

good luck!

Netscape sucks!

VideoTurtle Information Sheet
Turtle Enterprises

Thank you for your response to VideoTurtle!

The VideoTurtle is a video-convertor product. It converts RGB known as TV RGB, 15.7 KHz, into S-Video.

So many systems use TV RGB Monitors as their primary display. Slight problem, though! TV RGB Monitors are no longer made for general consumer use. The choice for us has been to either buy a used monitor, or somehoew use a regular TV. Not much of a choice is it?

VideoTurtle, from Turtle Enterprises, gives you a better choice, and in many cases, even better than the old monitor! By taking the output from your home computer/video games system, attaching a cable to the VideoTurtle, and an S-Video cable to the S-Video TV, you are ready to go! Plug and Play!

Some systems come with TV RGB but with distinctions, and VideoTurtle can handle that with mere jumper changes! All in all, no software drivers to load, or certain video modes to use, to utilize the VideoTurtle!

Tex Comp Ltd is the authorized distributer of the VideoTurtle. To order call (800)846-3474. Technical help from Turtle Enterprises is (818)967-3341!
To contact Turtle Enterprises via email use: videoturtle@hotmail.com
The price of the VideoTurtle is $149.95. Shipping is 4 weeks.

Thank you again for your interest in the VideoTurtle from Turtle Enterprises!

Regards,

James W. Krych

Good News For RGB Monitor Users!!!!

A new product, the VideoTurtle from Turtle Enterprises, is now available!
This product converts RGB known as TV RGB, into S-Video signals. Replacing
the need for an older TV RGB Monitor.

ANY SYSTEM, that outputs TV RGB, can use the VideoTurtle. Some of the
many are:
Sega Genesis/32X/CD-ROM
SNES
Amiga
Atari ST
Neo Geo
Apple IIgs
Laser 128
MSX II/MSX II+
Adam
Commodore 128
TV RGB Monitors(for uses other than computer/video games)
Video Arcade Games, ones that output RGB.
IBM CGA

Please, no flaming! If interested in the VideoTurtle from Turtle
Enterprises, please email me-ab453@cleveland.freenet.edu

Thank you!

I have no idea what "pseeudo" means?

But to auto boot prgs?... well heres how I do... I make a disk image
of an auto folder that comntains NVDI and a replacement file selector,
The same disk image contains ACCs such as nvdi, st guide and a few
others,
Set pacifist to autoload,

Then on clicking the MONO Icon on me win95 desktop, a couple of
seconds later I have a NVDI enhanced full screen fully working mono
tos 206 desktop,

From there i can change the drive A and B disk images and use the
emulated ATARI as should be:), I know that most auto folder prgs work
from here, so why not replacement desktops,

> And while trying to copy a couple of .prg files into WIN 95, I receive an error that the .prg's
>aren't in the proper format and their rejected.

Sorry I don't understand the above question?

Unfortunately, my problem is that with SpeedoGDOS installed, although
I can change the normal text in CAB, the headings (<H1> through <H6>)
all display in the 8x16 system font size. The headings only show up
at the proper sizes when I run CAB with SpeedoGDOS disabled.

3291. SAM 1.3 uses 1.6MB RAM !?

Newsgroup: comp.sys.atari.st
Date: 1997-06-03 00:00:00 UTC
From: mb@tos.pl.net
Message-ID: <RV7MCSC@tos.pl.net>
Source record: 121589
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I just tried out SAM (System Audio Manager) version 1.3 (the version patched by "Kosmic Phish") and discovered that it uses 1.6MB RAM! I have the buffer size set to 0 (zero) and no sounds installed, so obviously this figure will only get higher if I actually install some sounds.

Is this normal? Is it a known problem? What can be done about it?

This problem was observed on a TT030 with a total of 4Mb ST RAM and 4MB TT RAM.

>joewilson@tenforward.com

Hi Joe,
After outgrowing the original 85meg internal IDE HD in my Falcon, I ended up getting a 1.08gig Toshiba. Bigger than I was looking for, but it's sure nice to have all that extra storage, especially for audio files. I had tried a 340meg IBM, but had problems. I have a 540meg Quantum for my external SCSI. I think that the SCSI is much less likely to have compatability problems. Following are a few replies I got back when looking in to the internal IDE compatability problem:
Hope this helps! - Clayton Murray claytone@aa.net (Seattle, WA USA)

FROM ICD:
>Clayton,

>You cannot use IBM or WD IDE hard drives with the Falcon.Try Quantum
>or Seagate.

>I have had good success with the Quantum Europa series 2.5 inch IDE

the problem is with AHDI - it expects to find every drive in order
of SCSI ID without any gaps in ID in between. I'd suggest getting ahold
of HD Driver 6, which will read all drives on the chain no matter in
what order they're in. HD Driver also allows for taking advantage of
your ZIP drive's features. Try getting ahold of the demo and try it out.

THE ATARI ST QUICK FAQ
v1.4 - June 2nd 1997

In order to save bandwidth and avoid comp.sys.atari.st newcomers asking the same questions over and over again, here is a quick list of the most Frequently Asked Questions (FAQ) and, hopefully, useful answers.

http://www.geocities.com/MotorCity/2090/quickfaq.htm (USA) HTML version

or

ftp://ftp.sn.no/user/hallvart/atari/info/quickfaq.txt (Norway) ASCII version

If you don't have web or ftp access, send me an e-mail at the following address, and I will be happy to send the FAQ to you:

bales@garonne.stortek.com

This announcement is manually posted once every week.

Nick

>Thomas Main

IMHO, the best way to use DJNews is to use the Power Search feature.
Hotlist it, NOW! Use the default settings except for the following:

In Search for box: comp.sys.atari.st (of course) :)
Change 25 => 100; Score => Date; Some => Great. That's it. For faster
downloads change your Display option to Text instead of Images (eliminates
all the ads) and put your WWWCACHE in a 4/6meg RamDisk. You can experiment
with other settings, but that's the best for me. No syntax/query errors.

Happy Surf'in

<redundant MCIBTYC message deleted>

there is a nice way to avoid messages from all-talk/know-nothings
like this loser - it's called a killfile (which hopefully will be
included in an upcoming version of NEWsie :)). Or by getting in
contact with postmaster@cedarnet.org and complaining about this guy's
longtime abusive behaviour in this newsgroup.

>Peter
> You guess it...Fpormerly sinclap!

: >
: > Leslie
: >

: Why use these programs? What do they do? What makes them so special?

Using BIGDOS06 allows an Atari user to read PC-formatted partitions larger
than 32 MB in size, as does MagiC, although MagiC replaces the operating
system (making it more efficient, BTW), whereas BIGDOS can be used with just
about any setup for the Atari machines.
Incidentally, for the initial poster of the message, there is another
alternative. You could also format the ZIP disk into 3 32 MB partitions,
and transfer the files that way. PC and Atari's formatting methods do not
differ apparently up to 32 MB.

You need no specific type because the Falcon as well as the TT supports
standard SCSI-2 drives. So any SCSI-2 drive will work. Note, however,
that if you have a SCSI drive with a capacity of more than 1 GByte you
can't use AHDI with it. AHDI doesn't support such large drives.

>I will also draw your attention to the contents of the last paragraph and
>reinforce Tims statement about emailing
While I agree with Tim that users must make sure they print their email address correctly and give out the correct email address, I tend not to agree with him when it comes to 'stealing' domain names. I do not think at all that the Danish company have stolen the name... it isn't stolen until it has been taken off zetnet UK.. which it hasn't. I do sympathise with Zetnet on this issue however, but it was really up to ZetNet UK to do something about this in the first place.. forward planning.. and that is the job of the domain name manager within their organisation.

That said, zetnet UK is a UK based company... will they want to register zetnet.ie, zetnet.is, zetnet.de, zetnet.nl? All of which require Zetnet to be resident in those particular countries? And if a company in those countries starts up under the name of Zetnet, then there is nothing Tim can do about that company registering zetnet.country_code

>>I am not pleased that this has happened, This company are nothing to do
>>with us but will be trading under that name. Much as I would like to
Yes, trading under that name in Denmark.. and? The point is, there is no crime at all that they trade under that name in their own country.. they are not breaking any laws.. and as far as they are concerned, they may have never heard of the ISP in the UK called Zetnet.

Anyway, I'll stop rambling...

Danny

Please explain to me why spam is more pertinent to atari related newsgroups
than to spam related newsgroups.

If you want to read about spam, about ways to fight it and the various
political issues around it, go to news.admin.net-abuse.email. That is the
place where you'll find all the anti-spam specialists and probably answers
to your questions.

If the spam is really atari related, then it might be ok, but just because
you're reading the spam on an atari doesn't make it an atari specific issue.

If I want to ask questions about cross-stitch, I go to rec.cross-stitch or
whatever. I don't ask in comp.sys.atari if there are any cross-stitchers who
use an atari.

Actually, they are now. Mitsumi was apparently the first company to manufacture one. Expect more to follow as CD-R becomes more mainstream.

That said, I think SCSI is the better way to go for CD-R (for both the hard drive used as the source and the CD-R drive itself), if for no other reason than to help prevent buffer underruns.

The ST will require +12V and +5V. I'm not sure about the pinouts. A PC power supply that provides both voltages should do.

Other pinouts can probably be found here:

I havn't used Pacificst, but STonX will let you use either a disk image
or a directory tree (IIRC this may only be on the unix version though). I
hve a working AUTO folder on my Unix box running STonX.

> And while trying to copy a couple of .prg files into WIN 95, I receive an error that the .prg's

W95 uses a VFAT filesystem, this may be trashing your floppy disks. Try
reformatting on you atari for PC-compatible and then copying the programs
onto it before the disk even _sees_ the PC.

From: "Peter R. Young" <pry10@damtp.cam.ac.uk>
Message-ID: <33943FD0.167E@damtp.cam.ac.uk>
Source record: 121607

When I owned a C64 I was a big fan of the Paul Woakes games Encounter and Mercenary, and part of the reason why I invested in a second hand ST recently was to get hold of some of his 16 bit games. I've managed to get the following

Damocles - superb!
Mercenary III - not had time to play yet
Backlash - great update of Encounter
Encounter - why?

I've got a few questions which some of you may be able to answer:

* do you know why he re-released Encounter? Was Novagen in financial troubles and so desperate to make money? The game isn't as good as the C64 original and hasn't been updated at all.

* what's Mercenary III like? I've been pretty busy with work recently and haven't had a chance to play it.

* are there any more Paul Woakes games that I should look out for?

* what does he do now?

Thanks,

Peter

I have the following ST games for sale in the UK, they are all £5 each inc P&P or any reasonable offers for individual games or for the lot, and they are all originals:

Hollywood Hijinx - original without instructions but it is a text adventure game;

Red Heat - original with instructions;

Indiana Jones Last Crusade - original with instructions, not the graphic adventure it is the platformer;

Rambo III - original with instructions;

Yogi Bear In The Greed Monster - original with instructions;

Little Puff - original with instructions;

Ruff And Ready - original with instructions;

Count Duckula - original with instructions;

Axel's Magic Hammer - original with instructions;

Back To The Future Pt II - original with instructions;

Chuckie Egg II - original with instructions;

Ranarama - original with instructions;

Get Dexter - original with instructions;

Bart Simpson Vs The Space Mutants - original with instructions;

Galdegrons Domain - original without instructions.

3314. JTS joke?

Newsgroup: comp.sys.atari.st
Date: 1997-06-03 00:00:00 UTC
From: Magnus Kollberg <emwoll@emw.ericsson.se>
Message-ID: <yvvd8q3q1rf.fsf@emw.ericsson.se>
Source record: 121612

Hi there,

I just took a look at the atari stock (now JTS). What a laugh!
Ha!

I give them 6 months not more. Atari could have done much better
than this by just selling old STs and Falcons and god knows what
could have happened if they stayed in the computer buisness insteed
of dreaming about TV games and fast cash. Atleast in the computer
market they could have remain a nish company. :-\

Hi
Below is a list of what I have for sale.I bought a Falcon so I
don't need my ste.
The highest "reasonable" offer ($US) will get it.I would like to
feel that the purchaser and myself got a fair deal.
Everything is in excellent condition.A new power supply was just
installed in the HD.Buyer pays the shipping costs.I'm in Canada.

*1040STE/4 megs(language disk and manual)
*60 meg Supra Hard Drive
*Notator SL(3.21)/Manual(in a nice binder)
*Unitor Smpte/EBU Synchronizer and Midi Expander
*Atari SC1224 color monitor

3318. Keyboard problems! HELP!!!!!

Newsgroup: comp.sys.atari.st
Date: 1997-06-03 00:00:00 UTC
From: daymon@mammoth.psnw.com
Message-ID: <5n1nml$qge@alpine.psnw.com>
Source record: 121616

Hi!

I've got a C-Lab Falcon MK-X with a TT keyboard, and I seem to be having a very annoying problem that's come up. It just started putting extra letters in that I don't type. For instance, here's what happens:

What I type: This is really majorly frustrating!
What is displayed: TIhtis is rueally vmafjoruly fjurustiruatting!

Just typing this post so that it's readable is nearly impossible! The letters that are having the problems are:

r-u, t-i, f-j, c-k, v-m, 4-8, and 5-9. Whenever I type one letter from one of these pairs, it *almost* always displays the other right before it or right after it. Then sometimes everything's fine. It's like there's some kind of short or something triggering it so that sometimes it works perfectly, and at others, it gets all screwed up. Can someone help me, please?!?!?!?! Has anyone else run into this problem? It's almost exactly one year old (at least since I purchased and received the computer), so it couldn't be just getting old! HELP!!!!!

Mike Freeman

We are a subscription-only magazine, although you can pop into Computer
Direct in Edmonton, Canada and buy it off the shelf!

Depending on where you are in the world, you can subscribe through a local
distributor or if this is not possible you can subscribe direct with us the
publishers in the UK.

Just email: ataricomputing@cix.co.uk and ask for full details to be sent to
you via email or snailmail.

It's a simple as that :-)

Best regards
Mike Kerslake

If memory serves, I've seen this title under CeeJay's Software listings.
Give them a call at 1-618-242-0405 from 6pm till 10pm CST and find out.
If you don't get their listings, you should! They routinely have great
titles like Gods/Chaos Engine/and many others for $15.00 and under. I
got Gods and Chaos Engine for $10 each. Carrier Command, I believe was
only $2-4 or so... Give'em a try, and good luck! :)

Suppose to be available by June 18 according to MacWarehouse and
MacConnection. Price will be $149.95.

Screen shots can be viewed..Goto to www.macsurfer.com to look for the
Mac OS rumors page link. Very nice..

> So did I until I started following CHRP stuff a bit more closely.
> Wintel is bad, but compared to Apple it's an angel ;-).

Apple is trying to get a fair return since they are the ones who do
the R&D. Apple needs to do this fairly for all benefits..

What a bunch of bull. The fastest PowerMac is the PowerComputing
PowerTower Pro 250(250mhz. 604e) will blow away anything Hades period!

The upcomming OS 8 will further the widening of the gap with a
multithreaded finder(100% native)..

A 140 mhz PowerMac with 8x CD, 1.2 gig, 2pci slots with
internal/external SCSI and 16 megs ram cost $879 new! Show me a ST
that can beat that at that price new?

Look at the bright side. If JTS is close to croaking, they may sell Atari to someone who would actually *DO* something with the company beside holding it hostage for the loss write-off.

Go (down) JTS!!!

Perhaps a Mac is cheaper, but then you'll have to use the MacOS. After using my PowerMac fairly heavily for the last several years, I have to say, the OS is garbage. Slow, unstable, crap, even with 72meg of Ram. I REALLY hate to say it, but even W95 is more stable and more usable than MacOS.

Apple needs to get it in gear and put some effort into the OS - throwing processing horsepower at the problem is not a good enough solution.

Now if someone would just write TOS for the PPC... Not emulation within MacOS (a la Magic), just a small efficient OS that doesn't need to be installed from a CD-Rom - that would be refreshing.

3332. ST Stereoscopic LCD glasses wanted.

Source record: 121676

howdy,

not sure if anyone can help, but i'm trying to find information on how to get a particular hardware device for the ST (and probably TT etc.).

It is a pair of glasses, with Liquid Crystal lenses, that would alternate between being opaque and transparent, in time with the screen refresh frequency. Each lens was configured to be always in an opposite state to the other, with the rational being that with only one eye having vision at any time, a _very_ realistic 3D image could be produced on screen, with each successive frame having a different perspective for the different eye.

I remember an add in an old `Antic' magazine for them, but haven't heard of them since. Anyone have a pair, or advice on how to get one / who to talk to...

Thanking you in advance,

-Gus

3333. GSZRZ on PAK'd MSTE

Newsgroup: comp.sys.atari.st
Date: 1997-06-03 00:00:00 UTC
From: Oliver Skelton <skelton@gatwick.geoquest.slb.no-spam.com>
Message-ID: <33938573.4A8A@gatwick.geoquest.slb.no-spam.com>
Source record: 121677

I have just started to do some comms with a PAK'd MSTE (patched TOS 3.06).

I have installed DRVING.PRG and SCC.PRG from HSMODEM7 (default params) Using CIXCOMM/CIXREAD I selected Serial 2 port and `110' speed to get 115,200 speed (Courier V34 modem) and dialled into the cix BBS.

All seemed to work well for interactive work, but when I kicked in a download (using zmodem from 030 version of GSZRZ to download an ARC compressed file) I started getting `garbage count exceeded' etc. This was still a (lesser) problem when I switched down to 57,600BPS.
Now it may have been because of the length of RS232 cables that I was using, and also I think ICD Pro hard disk driver was partly to blame (caches off, write verify on), but still I wonder:

Does anyone have any hints for COMMS with MSTE+PAK?
Can I move any parts of HSMODEM or GSZRZ to fastram?

Please reply by mail as well as news - I am not confident I see all postings.

Oliver Skelton

Thanks to all here! I've been following the Pacifist thread and decided to dl the program and I've
finally got it up and running. My Mega ST4 watches over my shoulder in a nervous bemusement as I
post this....
Here are my problems.
Is there a way to utilise a pseudo auto folder with this program? It would be nice to be able to
load Neo-desk and a few DA's with it.
And while trying to copy a couple of .prg files into WIN 95, I receive an error that the .prg's
aren't in the proper format and their rejected.
Any insights?

An Atarian to the end!

Monospace fonts are possible and there are many PD ones. My CFN font editor
Fonty will work on a Falcon and costs very little from the FaST Club,
UKP 11.95 it generates Monospace fonts and converts PS fonts to CFN.

Their web page is at

3337. Classic Computers Discussion List Info.

Newsgroup: comp.sys.atari.st
Date: 1997-06-04 00:00:00 UTC
From: bcw@u.washington.edu
Message-ID: <3395ebbf.427095751@news.u.washington.edu>
Source record: 121381

Yep - it's time to promote the Classic Computers List
once again. If you don't want to read this message
then stop right now.

The Classic Computers List is a discussion list for
people who collect/preserve/restore old computers of
any kind. If you would like more info you can find
it at http://weber.u.washington.edu/~bcw/ccl.html.

If you don't have access to the web, then send an
e-mail to bill@booster.u.washington.edu.

On the web site you'll find information on how to
subscribe in addition to the two ClassicCmp FAQs.
If you decide to subscribe, please read all three
documents first.

Bill Whitson
ClassicCmp ListOp

From: Satcom2 <svenhard@primenet.com>
Message-ID: <01bc713b$f526c860$8c3bd4cc@Primenet.Primenet.com>
Source record: 121382

I have had many responses to my last post, thank you to everyone, but most people suggested I use the Epson LQ driver, which won't work with my Panasonic KX-P1123 24-pin printer. Does anyone else have any advice for a Calamus driver for my printer?I'm using a Falcon 030 and it prints when I use a text editor so I know it works, just can't do anything under Calamus which is unbelievably frustrating.I tinkered with printgem until I wanted to scream and nothing worked.

Where do we manage to find a quote for JTS - I have been scanning the listings for the NYSE, Nasdaq and Amex since they took over and I have never seen it listed - not that I really care - but how much is it trading for these days ?

As to the other - yes, t'would be nice if someone would do something with Atari TOS as an option rather than MacOS or Windoze - but - I would sincerely advise no one out there to hold their breath waiting !

Paal Monstad wrote this to All about Magic and Cubase Audio?:
PM>
PM> Will Cubase Audio run with Magic on a Falcon?

NO WAY!
Cubase Audio doesn't accept a multi-tasking environment, as the MROS is
multi-tasking in itself.

CB> If I get a fast IDE drive for my 14meg Falcon, can the machine
CB> itself support 8-16 tracks of audio or do I need to stick to
CB> SCSI-2? Thanks for your help.

If you use Cubase Audio, you have no choise but to use SCSI because of the software design, but with other programs, like AudioTracker and Quincy, I believe it's possible to use EIDE-disks too. However, the data transfer is handled differently when using IDE vs. SCSI, so even if you use a fast EIDE-drive, it's not absolutely certain that you're able to use 8 tracks... SCSI is certain to maintain the transfer rate required -at least when using new HD's of 1GB or larger (older HD's can be MUCH slower).

I'm afraid that is the one that doesn't work :-(I was never sure if it
was the Lightning or Fireball but from what yous say it must be the
Firball. When I was sent one the peopel were very good about it, ask
them if they could replace it.

Source record: 121444

I bought an STFM while the company was dishing out
assurances that the machine will still get support, HA HA!
I tried to use one of those "easy to fit" one meg memory cards
and the whole system went down: it may have been the re-seated
MMU but I can't think how.
THEN it was far easier to get software was not to hard to find
from the regular outlets but now it is almost (snail) mail-order
or nothing (unless you know better in which you should let me know soon!!)
The trouble I found with the ST is that it seems so mouse-sependant (unless you are running
this brilliant interpreted BASIC from an american supplier whose name I have entirely
forgotten (sad 'cos I'd love to grab another copy!!))
if that particular port doesn't happen to be operating to the full
(mine isn't- the pointer drifts to the top of the screen and stays there!!)
you are well and truly stuck unless all you want to do is play games.
At least the PD libreries should be pretty lively for quite some
time to come!!

Hi Kemosabes,

"It was a dark and stormy night". The Lone Ranger was in his humble abode contemplating life, liberty, and the meaning of everything. His loyal companion, Wainwright (a black cat), was purring nearby on the floor. Can everything be explained as a simple set of instructions, like a Mandelbrot Set, or is quantum mechanics a better explanation of events, random, a roll of the dice.

Then the cyberspace post appeared. "JTS joke?" Was the Atari company a seed through which various iterations recreated itself as JTS, or was this simply a random event? Is timing everything or nothing? Fractal geometry certainly is infinite. Time without meaning, endless. DNA, the mountains of Tibet, all creations of space/time. "Wainwright, what do you think"? "Meow" said the ruler of Kent.

Tomorrow, I'm buying 10,000 shares of JTS. Only the "Lone Ranger" would take advice from a cat. However, sometimes humans have more in common with cats than with other sapients. Maybe it's from a set of instructions coded from time immemorial. [Fade out, the music of Bob Dylan in the background, "Knock, Knock, Knock'en on Heaven's Door"]. JTS, a joke? Roll the dice...

Just spinning the cylinder of his Colt 45 Peacemaker,
with Silver bullet's.

Since you seem to have net access you can find quite a lot of support,
starting with this newsgroup. All the software I get is either from FTP sites
or from people selling stuff online.

>The trouble I found with the ST is that it seems so mouse-sependant (unless you

With TOS 2.x you can have keyboard shortcyts on the desktop and plenty of
other stuff. Otherwise you can use ALT+Cursor keys.

You can either try to find a new Atari compatible mouse, or use a PC serial
port mouse with a special driver (mouse25, available on umich atari.archive),
but this will occupy your serial port.

> it; neither as an internal drive nor hanging off his Link 2 on the

The Fireball needs initiator identification, i.e. the computer must have
its own unique SCSI ID in order to recognize the Fireball. The only host
adapter that supports initiator identification is the LINK96/97. Any
other adapter won't work with the Quantum Fireball.

I just got Calamus 1.09n and need at least 1 mono-spaced font. The fonted.acc won't work on a Falcon so I don't even know if mono fonts are possible. Thanks for any help.

With these programs you can read and write DOS compatible partitions
with a capacity up to 2 GByte.

Gaven Miller wrote:

> So, is there an upper limit to the size of SCSI-2 drives?

A SCSI drive can have up to 2^32 sectors, so this is the upper limit.
Note that a physical sector can be larger than 512 bytes, e.g. 2048
bytes. In this case the drive capacity wouldn't be 2^32 * 512 bytes but
2^32 * 2048 bytes. So there is no real limit at all.

I have had some sort of an ATARI for many years now... the only thing
ATARI as a company did for me is make the machine... I didnt notice
them go?, it made no difference to me or probably hundreds of
thousands of others.. The company died.. what changed? nothing as far
as most of us can see... so who cares?.. if ATARI is resurected
(highly doubtfull lets be honest) then what actual difference would it
make to your normal everyday ATARI ST owner/user...none?

I spend on average 6-8 hours a day on my ATARI STe, Nothing changes
:)

Hey who moved the goalposts?...you are missing the point? <smile>

Someone posts asking for help , an ATARI user with a SPAM problem,
The solution of pointing him towards the relevant newsgroups is a
GOOD answer... there is nothing wrong with that and I would not
complain to anyone for doing that,

However that is NOT what the originaly reply did, the original answer
was to scold the poster for being off topic, give him stupid advice
about putting his email address in the return field (look around! not
many do?) and realy make the guy feel bad about posting his problem :(

Perhaps if given the same advice and pointed to the same newsgroups,
but without trying to tell him what he can and cannot post to c.s.a.st
then there wouldn't have been a problem,

Cheers !ynoT (ATARI Programmer)

PaCifiST can be found at many places (actually a quick search on Yahoo or
AltaVista would have probably told you). Try out:

The Atari ST Emulation FAQ

http://members.iglou.com/rsg0910/atstemu.faq.html

PaCifiST ST emulator

http://wwwperso.hol.fr/~gidouin/pacifist.html
http://www.geocities.com/SiliconValley/Lakes/6875/pacifist.html
http://www.jetman.demon.co.uk/st/index.html
http://shaw.iol.ie/~ajankows/st/pacifist.html

If you surf around those places you'll probably find those pirated TOS ROM
images.

Hi,

Actually I did use ICD Pro to set the Toshiba up this time. It was only
after that did SCSI Tool work with it. I have HD Driver 6, and it
dosen't seem to work well with my setup. I use SCSI Tool as it has more
features than the ICD driver, is XHDI compliant, and am pretty
comfortable with it. I also have software and hardware that is not
compatible with the ICD software. SCSI Tool and HUSHI have been very
reliable for me.

3376. 4 MEG GAME

Newsgroup: comp.sys.atari.st
Date: 1997-06-04 00:00:00 UTC
From: !ynoT
Message-ID: <33af74b8.20296878@news.airtime.co.uk>
Source record: 121467

My current project is to use as much memory as I can on a bare bones 4meg STe or Falcon,

The only thing not to be turned off (trying to insist on a clean boot) is the hard drive control fing,

Currently the game is taking 2.7 meg.. but more animation to come,

QUESTION, How much memory do I need to leave free for the HD software?, is it minimal as in a few K, or is it like quarter to half a meg or something ?

I do not have a HD so testing for the result is impossible :)

The game has been succesfully tested and breezes through everything up to and including a Falcon with Nemesis, but a clean system is prefered, I presume the HD software is the minimum, nothing else desperatly needed to boot the old Falc is there...sorry I havent got one of them either :)

Cheers !ynoT (ATARI Programmer)

Well, maybe it's just the ICD driver that sucks. I have a 2,1GB SCSI2
drive and if I made partitions bigger then 1 GB on it, they just
seemed not to exist. I'm advising everyone to use HDDriver 6.22, it's
an up-to-date driver that does evereything and more that is needed for
today's harddrives.
BTW: I experienced ICD makes MagiC very buggy and unstable...

3381. Re: Good News For RGB Users!!!

Newsgroup: comp.sys.atari.st
Date: 1997-06-04 00:00:00 UTC
From: dlormand@aztec.asu.edu
Message-ID: <5n4ekb$hb7@news.asu.edu>
Source record: 121472

>I was always under the impression that RGB was 1 step better than
>S-video.

From what I'm hearing, theoretically, RGB is better than S-video. But practically speaking, the new S-video monitors are so much better than the old TV-RGB monitors (like the SC1224) that the image is much better even after the conversion.

->>bottom margin.
->
->Yep, allways the same trouble with a hp 660.
->I think it's a pinter hardware problem ;-)

I have an HP600 printer and I think it isn't hardware problem. On many
Gdos drivers I have that same effects as you but... I have one driver
(from France) called DJ510_T.SYS which can more. With this driver is
possible to get 17 mm bottom margin on A4 format. I use it with NVDI4.11
With others drivers (DJ5.SYS, DJ510.SYS, LASERJET.SYS) and similar
bottom margin is about 30mm.
17 mm it is normal result for HP (as is written in user guide).

Maybe it is problem witch setting of type of paper in HP printers?

->>This problem does exist with all applications under NVDI 3.x
->
->Right, before i take a hp 660, i have a hp 500 too.
->Same features ;-)

Is somewhere an program to _edit_ an existing driver for Gdos?
This maybe can help in making new drivers.

Best regards
Andy

Hi Paul

You need to have arbitration turned on to use quantium fireball HD
Drives. ICD wont work you will have to get HD DRIVER 6x Even on the TT
it will give problems if you also have an internal drive.

Interesting! :^)
Most of your combinations seem to be two keys apart.
If it is software: check you key repeat rate in the control panel.
If it is hardware: is the TT keyboard the same design as the MegaSTe
key-
board? i.e. the film with traces on it? perhaps there is something
scwewy
going on there?

> Mike Freeman
> daymon@psnw.com

I would suggest a DEKA2, so you can attach a IBMstyle keyboard.
I did that with my MegaSTe because the keyboard was giving me problems,
and since I did - no problems!!
good luck.bonne chance

main@appstate.edu said:-

>I have a stock Falcon030 and I am using HSModem to speed up the serial
>port. Right now I am just using the driver prg. and scc.prg with the
>default values. Has anyone modified these values? What is optimum?

The default values in driver.prg and scc.prg are perfect for a stock
Falcon. The only things to change are perhaps the Modem2 input and output
buffers length. I'm not limited by memory, so I've set them to 32766 each.

Here are the scc.prg settings I use:

M2TT: U
M1EMU: U
LANBIT: N
LANEXT: N
LAN_S2: U
DTRM2: Y
DTRS2: Y
M2DRI: N
S2DRI: N
RBLM2: 32766
TBLM2: 32766
RBLS2: U
TBLS2: U

Bye! Bruno.

3388. New MiNTnet overlay for CAB released

Newsgroup: comp.sys.atari.st
Date: 1997-06-04 00:00:00 UTC
From: hyc@frisky.la.platsol.com
Message-ID: <5n4iv7$1ov6@frisky.la.platsol.com>
Source record: 121479

I have taken over development of the MiNTnet overlay that Andrew Vesperman (aka Dancer) wrote. This announcement is for version 1.80 of the overlay, for use with CAB 1.5 or 2.0. The current distribution (source & binary) is available at
atari.archive.umich.edu:Mint/Network/cab-mintnet-180.tgz
also at
ftp://ftp.cam.org/users/ypell

Features:
many bug fixes
many speedups
supports forms & mailto
recognizes all HTTP 1.1 error codes
supports ftp via proxy server
uses CAB proxy variables instead of environment variables
supports multitasking

The overlay has been rewritten to execute as a MiNT thread, allowing it to execute in parallel with the main CAB process. (A "thread" in this case is a MiNT process, but it resides entirely within the address space of the parent process. As such, it shares all of the parent process' memory and consumes no extra memory of its own.) This restructuring allows the main CAB process to continue processing while the overlay is talking to the network.

The overlay has been tested on a variety of systems for a couple weeks and is very stable. Future versions will include enhanced parallelism, full ftp and gopher support, more HTTP 1.1 support, and SSL for talking to secure web sites.

You can also pop into ATY Computers in San Jose, CA., USA, B&C
ComputerVisions in Santa Clara, CA., USA, or Systems For Tomorrow in
Independance, MO., USA and buy off the shelf.

Mailed copies in the USA can be also obtained from Richard Tietjens in
Tigard, OR., USA or from Computer Direct in Edmonton Canada.

All of the above will also mail you copies by Subscription.

Lots of choices!

All the best,
Chris @ Computer Direct.

In response to John.Kormylo@7861.conchbbs.com's message:

>m > Does anyone know the reason of a min. 3 cm of bottom margin on
>m > my HP Deskjet 510 with a A4 page format ?
>
>m > This problem does exist with all applications under NVDI 3.x
>m > or other printer driver.
>
>I believe you need a separate GDOS driver for each DPI and paper
>type.

Hi John!

Before he does that, make sure that he checks the DIP-switches. I had this problem with my 520, and found that if A5 and A6 were both down (the default) the printer thought it was handling U.S. Letter size even though the softwaare was set to DIN-A4. Moving A6 switch up cured the problem! I would guess that the 510 is similar to the 520 in this.

The other tip is to get hold of and use the GD-CHECK PD-program. This has two functions. The first is the one to use here: It prints out a frame on the page showing the currently active maximum printable area, with a ruler marked in 1/20 inch intervals in the middle of each side. From the printout it's then easy to fine-tune the margins in the NVDI printer-driver dialogs to ensure that you get correctly centered and sized printouts. The second part of GD_CHECK allows you to print out any or all your GDOS fonts, both bitmap and vector, in various sizes and using any desired test characters - I have set mine up to print the complete ASCII character-set from 16 to 255 so that one can see what 'foreign' characters are directly available.

I translated the program itself into English for the author, Christoph Bartholme, and it is available through InterActive (though the ST-Guide HYP file I have is still in German).

Regards
Peter

Go for the STe...!

1. Newer version of TOS 1.60/1.62
2. At the same time, TOS is socketed and easily upgradable to v2.06.
3. Memory is in SIMM slots and easily added. (I've seen 4 megs for $30!)
4. Blitter chip for faster graphic ops.
5. Hardware scrolling...
6. 2 more analog joystick ports supporting Jaguar controllers.
7. CPU is socketed (much easier to upgrade to Adspeeds/T28-36, etc,...)
8. 4096 color pallete... (better Photochrome pics!)
9. Much improved sound system (stereo sound with RCA out jacks)
10. Most "modern" software is more backward compatible between the Falcon
and STe than older ST's...

Well, I'm sure there is more-but thats all I can think of off the top of my
head... Should be enough reason though! :)

>my VGA monitor. There is a TV jack on the back also. How do you use this
>connector? Is it RF out or video out? Is it NTSC or PAL?

It is a RF modulator for use with a TV... Umm, its whatever your Falcon is.
I mean, if your Falcon is NTSC then thats what it is...

>My manual doesn't give much information on this RCA connector.

Well, you know how Atari manuals are! <big grin>

>I have an RGB color monitor I used with my old 1040ST. Will it connect to
>this connector?

No. You will have to get a separate adaptor for the SC1224/1435. Let me make
an observatin here though. To get the best, most flexible video out of your
Falcon, you really, really need to get the Multisynch Gizmo by Chro-Magic,
and hook it up to a multisynch monitor that will do VGA (at least 640 x 480
or 800 x 600 with Videl) and will still synch down to a 15khz level. That way
you can see all the VGA stuff as well as see RGB mode demos, and games. Its
the best way to go. Some examples of multisynchs that do this are the NEC 3D,
Ideks, Amitechs, older Princetons, older CTXs, etc,... Make sure you check
the manual before you buy.

>Thanks

No problemo, always glad to help fellow Atarians! :)

PS I got to thinking about something-if you were connecting your ST to that
RGB monitor via the RF modulator on your ST, then yes it could work on the
RF modulator on your Falcon...otherwise, still no...

Hi,

The IDEK (now called LLama sp?) and CD Solutions are RGB monitors. I'm not sure if the CD Solutions has jacks for NTSC, but it could be wired for it i'm sure. They make a 14" and a 17". Visit most any Amiga dealer web page for more information. They are based in California. They are kind of pricey as well. There are some Commodore models available that do have S-VHS, composite and RGB all in one, for a good price, but you would have to make up an adapter to use the RGB on the Falcon. They will however work somewhat like a multisync supporting up to 800*600 VGA as well as ST/Falcon RGB scan rates.

Mike

I've heard of some rather esoteric solutions for the IDE problem for older
ST's, but my advice is to obtain a Link 2 adaptor and a SCSI drive in an
(expandable) external drive case... You'll love the heck out of a hard drive
if you've not had one on your ST! :)

>nopea@direct.ca

Well, since its not the STe, then the Ram is soldered in, and to expand it
(assuming it hasn't already been expanded at some point in its life), you
will need to get a memory board, such as the Xtra Ram board, and then you
will be able to use common 30-pin SIMMs, non-parity or parity, go with 4 1
meggers, from 80ns to 120ns speed... You'll love the extra memory! :)

K > and stays there!!)

Unless I am very mistaken, this is caused by a bad connection between mouse and computer. The place to look is the connections at the mouse port under the computer; re-solder and you are back in business. Although the mouse cable and/or connections at the mouse can be bad, of course.

The pointer can also get fairly weird if the power supply voltage is low; on the two that I saw that this has happened on, the voltage could be tweaked upwards (5V) to fix it. This may not be possible on some power supplies; replacement would be the only option.

Studienaccount Uni KL <hoebel@student.uni-kl.de> said:-

>I'm getting a PPP-Connection and i can use FTP with IP-Number's but not
>with Names (like ftp.uni-kl.de).

Verify you have set the IP address of your Domain Name Server in the
file /etc/resolv.conf like that:

```
----- 8< ------ 8< -----
domain compuserve.com
nameserver 149.174.213.5
nameserver 149.174.211.5
----- 8< ------ 8< -----
```

But with uni-kl.de as domain and your real nameserver(s) IP. You could
also verify you have the line "order hosts,bind,nis" in the /etc/host.conf
file, like by default in PPPKIT.

Bye! Bruno.

Atari ST stuff for sale, all works, just don't need it any more.
Prices do not include shipping. If you don't like my price,
make an offer.

Atari 520STfm computer. 8 MHZ 68000 CPU. 1 meg RAM.
720K 3.5" diskette drive. Includes power cord, mouse,
joystick, various utility software. Excellent condition.
$50.

Atari SM124 black and white monitor. Very good condition.
With tilt and swivel base, power cord, signal cable. $30.

Atari SC1224 color monitor. Excellent condition. With
tilt and swivel base, power cord, signal cable. $40.

"Monitor Master" monitor switch, for easy switching
between the two monitors. Free if you buy both monitors.
$5 otherwise.

Timeworks "Word Writer" easy-to-use word processing
software for the Atari ST. Populous (game) and Flash
(communications).

Also available: 2400 baud external modem, Everex 24E+.
Does MNP5 error correction and data compression. Includes
power module, instruction manual. $10. Cables upon request.

Also available: Datadesk fancy keyboard for Mac Plus.
(Won't work with more recent Macs.) $15.

The STE came after the STF and STFM

F stands for integrated Floppy drive,
M stands for integrated RF Modulator
E stands for Enhanced

The STE is actually an STFM with the following enhancements:

DMA stereo sound
Enhanced colour palette (4096 colours instead of 512)
TOS 1.6 or 1.62 (instead of 1.2)
RCA/Cinch stereo outputs
Integrated Blitter chip (for accelerated graphics)
Analog Joystick ports (hardly ever used in any games)
SIMM memory sockets (easily expandable to 4Mb - A great improvement!)

Nick

Is your Falcon modified in anyway?
Does the dongle clear the working surface without binding?
Do the connector (cart port) and PCB look ok?
Did you insert the dongle with the machine on? (bad)

As you can see i only have in my country two time zones. I think the DOC say that the letter 'a' in the begining, tells Dialer that the time zone that comes after the letter is for every day. What am i doing wrong?
Thanks for any help.

You need a copy-protection key (a cartridge that plugs into the cartridge
port).

Ask the guy who sold you the program. Without the key, the program is useless.

If he hasn't got the key then get your money back.

>the buffer size set to 0 (zero) and no sounds installed, so obviously this
>figure will only get higher if I actually install some sounds.

Nope, it wont - it appears that there is a bug somewhere in the memory
allocation routines which means that if you set it to 0 bytes it will take
1.6Mb.

If you set the buffer size to 1k it only takes about 200-300k.

I haven't checked that this bug also exists in SAM 1.2, but I guess so
(we didn't change the memory routines at all).

>Is this normal? Is it a known problem?

It is known / confirmed now. (Thanks to the guy on IRC - you email address
bounced?)

>What can be done about it?

Change the buffer size from 0 to something bigger. :-)

>This problem was observed on a TT030 with a total of 4Mb ST RAM and 4MB TT
>RAM.

....and also on a MegaSTE TOS 2.05 and 4Mb RAM.

:(. Lucky people. Over here, I can only think of one consumer S-VHS monitor that accepts RGB input, that being the Toshiba Timms. For video output to tape with a machine like the Falcon, or gaming on either an ST or Falcon (Jaguar as well) an S-VHS 20" monitor is a far superior choice, and almost the only alternative to any type of RGB monitor available. IDEK used to make them in 17", CD Solutions currently makes a 17".

: everything. I'm getting a PPP-Connection and i can use FTP with
: IP-Number's but not with Names (like ftp.uni-kl.de). Cab and Chimera are
: running with Errors (they don't find the connection). I read nearly 30
: doc's about that, but nothing helps. Good friends of mine (Linux-Users)
: are useing the same PPP-Account with similar settings and it works there
: (with Linux PPPD).

Sounds like MintNet isn't finding a domain name server. Check
/etc/resolv.conf and make sure that there is an entry for the domain name
server. The file should look something like this:

```
domain yourdomain.dom
nameserver 111.222.333.444
```

You might also want to check /etc/host.conf, to make sure that the
nameserver is being checked.

Source record: 121427

If so, I would like to know what games are good for the Falcon 030, and what has actually been released. I just bought a 14 meg Falcon used.

In the August '96 issue of ST Format there is an article describing some games on the Falcon, but it is not clear on the release status of them.There is Spice, a Defender 2000 type game, Willie's Adventure, which looks to be a really awesome Rayman clone, Radical Race, which seems to be a Super Sprint clone, Obsession Falcon, updated from the STe version I guess,and Road Riot 4wd, a 3-d driving game. Are any of these actually out and available?

And if you have any other tips on obtaining cool Falcon games please let me know, I really want to collect all there is to collect, which isn't much I know, but as time goes on it will become more and more difficult to find anything at all for this obscure platform so I want to hurry before it's too late.

Also what is a cool demo besides the Lost Blubb? And is there any software or demo or game that can show off 14 megs as opposed to 4 megs?I would appreciate any help.

Well you could actually make _alot_ of money if you do. The JTS share is
as low as it can get and it can't realy get any lower. JTS might sit on
a winner, the 3" HD. They just have to convince everyone that it's
the HD to go for and if they are as good on convincing people as Atari was
, well....

I still thinks JTS is a joke though.

CUBASE AUDIO FALCON.- PLAYBACK UP TO 16 AUDIO CHANNELS, REVERB, CHORUS,
EQ, PITCH SHIFTING, TIME TWISTER, SAMPLE RATE CONVERSION, 64 MIDI
CHANNELS, SCORE NOTATION AND FILE ARCHIVING TO DAT (LIKE DIGIDESIGN'S
DATA).
INCLUDED THE FDI (FALCON DIGITAL INTERFACE) WITH OPTICAL AND SPDIF INS
AND
OUTS (WORKS WITH CUBASE AUDIO AND LOGIC AUDIO).

LOGIC ATARI.- SEQUENCER AND NOTATION PROGRAM. COMES WITH THE LOG 3 MIDI
INTERFACE AND AUDIO MODULE WITH AMAZING DSP FUNCTIONS.
CALAMUS.- STATE OF THE ART PUBLISHING PACKAGE.
STFAX.- FAXING PROGRAM.
EXTENDOS PRO.- CD-ROM PLAYER.
GVC VOICE/FAX/MODEM 14400 KBP

PLEASE MAKE ME AN OFFER. I LIVE IN CANADA (LONDON, ONTARIO).

Did you ever get across the idea that you're not doing anything wrong,
but encountered a bug in the Dialer ? ;-) Note STinG is a young package,
and the fact it works well with mainstream setups doesn't mean there aren't
any bugs left.

Seeing your message, I sat down, searched for, and fixed a bug that probably
caused your problem. See my web page for the fixed version (DIALER.LZH).

Cheers Peter

It is quite possible to connect to the Internet with both STinG and STiK,
without harddisk, just via floppy. Running CAB, however, will be tricky,
I guess ?

Cheers Peter

Does anyone out there have a spare copy of NOTATOR or anything for music DTP with midi for Atari Ste?

I have some items that I am willing to swap depending on what you're looking for.

Thanks

PAUL

I tried Cubase Audio Falcon on the STe but it refuses to run.

An interesting idea. The main problems would be the same as the MacLinux
and netbsd guys have faced - all the low-level device drivers. Personally
I would write MiNT, not TOS, for PPC. However, I'm not exactly sure what
that would mean. Make all of the system calls PPC native? Odd, since all
TOS apps are 68k...

>I was always under the impression that RGB was 1 step better than
>S-video.

You're right. Actually more than that, I'd say. A color signal encoded the way composite and S-video are encoded has inherent resolution limits that RGB does not have. This not only limits the size & number of pixels, but also limits the degree of change that can occur between adjacent pixels. (In practical terms you seldom run into these limits. For instance, a blue pixel followed immediately by an orange pixel cannot be represented without some intermediate hash, because the color is encoded as a sine wave which cannot change its phase instantaneously. But those two colors are at opposite sides of the color wheel, and such transitions don't happen often in real use...)

However, S-video is still better than composite video, which is your other alternative if you're going to a TV display.

I sent these guys an email query for more info about the product, but all I got was the above posting as a form-letter reply. Not very nice.

They don't mention anywhere what kind of bandwidth their device supports, or what kind of resolution they can handle. I suppose they ought to be able to manage 640x200 noninterlaced, otherwise there would be no point. Also most modern TVs have RGB buses inside; you can order the service manual and schematics from the manufacturer and solder in your own RGB input.

Now that DVD is out, with component video output, there will be TVs with component input on the market. Component (YUV) video is one step less than RGB (so I guess that makes RGB two steps above S-video, eh?), or for practical purposes, equivalent in quality to RGB.

>
>David Klimchak
>Composer & Performer

Hi, David.... Yep, its a software video enhancer, and it will give you a scrolling list of freqs./resolutions/colors that it can do with your Falcon -monitor combo. It works with RGB's/VGA's/multisynchs... Works pretty well considering its software only! I know its on the Falcon CD collections (such as the excellant Bird of Prey) and I'm sure its on all the major Atari ftp sites... If you can't find it easily, let me know and I'll UUencode and send it to you via E-Mail... Have fun! :)

I use drivers for the Epson LQ or IBM Proprinter on my KXP-1124 printer
and they work a treat - as far as I know the KXP-1123 is essentially the
same printer with a couple of 'faceplate' changes to justify a slightly
higher price. Maybe the dip switches need a 'jiggle'.

>C300789-002 H0
>C300790-002 L2
>C300791-002 L1
>C300792-002 L0

Hi Doug!

You *should* have received some instructions for fitting - at least I did from my supplier.
The fitting depends on the computer model. The sockets for the ROM chips should be marked on the board as per table below:

Chip	Mega ST	Older ST's	Newer ST's
H2	U3	U2	U48
H1	U6	U3	U59
H0	U9	U4	U63
L2	U4	U5	U53
L1	U7	U6	U62
L0	U10	U7	U67

If you originally had 6 ROMS fitted, this completes the installation. If however you previously had only 2 ROMs fitted, carry out the following:

Mega ST	ST

Remove solder blobs across pads marked 2 and 3 1M
in locations marked W2 and W3 A17, A16 & CE

Apply solder blobs across pads marked 1 and 2 256k
in locations marked W2 and W3 A17, A16 & CE

Solder jumper across location marked W4 --
(to short out resistor)

Remove U12 (74LS11) --
(connected across W4)

The pads on the Mega are at the left front of the board, and so are the A16 & A17 pads on the ST (at least on my Rev.C board). I can't remember the location of the CE pads - ISTR they were near centre front.

HTH

In article <01bc71b3$12b27060$0214d426@smtp.jwhistler.org> dated 5 Jun 1997 18:19:46 GMT, mrsaeger@ttxco.com (Mike Saeger) says...

>I recently purchased a Falcon030 and also purchased the VGA connector for >my VGA monitor. There is a TV jack on the back also. How do you use this >connector? Is it RF out or video out? Is it NTSC or PAL?

The RCA jack is RF out. Both NTSC and PAL versions of the Falcon030 were sold. Unless it has been imported, it should match the video standard of the country you are in.

Composite output is provided by the Falcon030, but only via the DB-19 video connector. Different monitor "blocks" were sold by Atari to provide for connections to either: (1) VGA/SVGA monitors, (2) Composite video, or (3) Older DIN-13 Atari monitors, such as the SC1224 or SM124.

>I have an RGB color monitor I used with my old 1040ST. Will it connect to >this connector?

With the appropriate monitor block, it would attach to the DB-19 video port.

>Can someone explain the differences between a Falcon and a 1040ST??
>Or point me in the right direction?

There are more differences than similiarities actually. Basically the Falcon is much more powerful, has 68030/16Mhz processor (ST:68000/8Mhz), has a very wide variety of extended graphic modes, has an integrated DSP (digital signal processor) and is fully equipped as standard for audio recording. The only thing they have in common is the case.

You can have a look at this list of all Atari model's specs:

http://www.users.zetnet.co.uk/aseabrook/a_models.htm

Please be more specific.

There is an internal IDE adapter available for the ST that will allow the use of an internal HD, but it will probably have to be a 2.5" to fit easily inside. Take a look at Titan's homepage:

http://ourworld.compuserve.com/homepages/TITANWEB/

There is a wider choice of solutions for SCSI which is faster and more efficient than IDE.

3476. folder problems in pacifist

Newsgroup: comp.sys.atari.st
Date: 1997-06-06 00:00:00 UTC
From: ebermann erwin <erwin.ebermann@univie.ac.at>
Message-ID: <3397C3B3.DF68BCB1@univie.ac.at>
Source record: 121359
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech
Body handling: HTML body converted to readable text

I use pacifist 0.44 and programs like That's Write. I face constantly the problem that I cannot select documents from folders within a given program. I will get the following message instead: "this folder does not exist....". I am still able to read the list of documents included in that folder but will not be able to load any document.

To load a document I have to leave That's Write and I have to draw the document on the image of That's Write on the desktop.

I face similiar problems with fonts I cannot load within That's Write. Some fonts do not appear inside their font folders when looked for within That's Write program.

Does somebody have a solution for that problem?

Thanks

Erwin

>
>Thanks in advance.
>

First of all is your ST equipped with a double sided floppy drive, or a single sided one. Some of the older 520s had SS drives, later ones were equipped with DS drives. All 1040s had DS drives.

If it's a single sided (360K), then your out of luck, because no modern PC will read/write those disks. You best bet will be to upgrade the floppy to a DS 720K model, or use a PC 1.44K drive instead. There are instructions to do this at:

ftp://ftp.sn.no/user/hallvart/atari/info/sony_144.zip

If it's a double sided drive, the disk formats are compatible (well, sort of...). Format your disks in PC 720K format, either on a PC or with an ST utility (dcformat...), and that should be all.

There seems to be a small bug with Hard Drive emulation and folders. Try
making a BIG floppy disk image (like 4Mb), and run your critical software from
there. Most HD problems can be resolved that way, even if it is not the most
'elegant' solution. I beleive the author is working on the problem.

Nick

PS. HTML is not welcome on newsgroups. 90% of newsgroup users (and probably
100% in the atari world) do not have HTML newsreaders.

Hi there!

Does anyone know a good place to get Speedo fonts for GDOS? I know, I know, I should be using NVDI, but there's that whole money thing, which I don't have a lot of to be throwing into new software. :) I've searched all over the 'net for font download sites, but all I can find is TrueType fonts. Anyone else had more luck than me?

Hi all there,

We want to setup here in Poland new host with atari stuff running on atari. There is already ftp site (piwo.bl.pg.gda.pl/pub/atari) and we have a mailing list (in polish unfortunetely) and we (members of the mailin list) have assigned some funds for new HD. Now we are going to run the site on atari computer and we are looking for some used, inexpensive TT with ethernet card so we will install linux on it and have atari/motorola powered site on the net.

regards,

Szymon.

All Video Game Advantage (VGA) FS/T lists are updated weekly and are
available on the WWW at http://www.io.com/~vga2000/

'Sales Conditions' and 'Ordering Instructions' sections are at
the end of this message. Please read them both carefully *before*
asking any questions, or placing any orders. Thank you!

This list was last updated on 06/06/97

I have the following Atari ST software for sale or trade.

Unless specified, all items are *NEW* and are still shrinkwrapped.

SOFTWARE:

ATARI ST COMPUTER:

New diskette(s) [still shrinkwrapped!]:
$ 6.00 Arkanoid (Taito)
$ 6.00 Art & Film Director (Epyx) -- $4 shipping, due to weight,
counts as 1st item
$ 5.00 Battleship (Epyx)
$ 3.00 Bobo (Infogrames / Terrific Software)
$ 5.00 California Games (Epyx)
$ 5.00 Championship Wrestling (Epyx)
$ 3.00 Crash Garrett (Metal Hurlant)
$ 5.00 Death Sword (Epyx)
$ 4.00 Devon Aire (Epyx)
$ 4.00 Dive Bomber (U.S. Gold / Epyx)
$ 3.00 Dragon Scape (Free Spirit)
$ 4.00 Final Assault (Epyx)
$ 5.00 GFL Football (Gamestar)
$ 4.00 Golden Path (Firebird)
$ 4.00 Goldrunner II (MicroDeal)
$ 5.00 Impossible Mission 2 (Epyx)
$ 5.00 Karateka (Br0derbund)
$ 4.00 Knight Orc (Rainbird)
$ 5.00 L.E.D. Storm (Capcom)
$ 4.00 Lands of Havoc (Antic Software)
$ 5.00 Last Duel (Capcom)
$ 5.00 Man Hunter: New York (Sierra)
$ 3.00 Mean 18 Famous Course Disk Volume II (Accolade)
$ 5.00 Metro Cross (U.S. Gold / Epyx)
$ 5.00 Paint Pro (Abacus Software)
$ 4.00 Prime TIme (First Row)
$ 5.00 Quadralien (Spinnaker)

$ 5.00 Renegade (Taito)
$ 5.00 Space Quest: Chapter I (Sierra)
$ 4.00 Star Quake (Terrific Software)
$ 4.00 Star Ray (Logotron)
$ 7.00 Star Wars (Br0derbund)
$ 4.00 Stunt Track Racer (Microplay)
$ 4.00 SwiftaR (Accustar)
$ 5.00 Techno Cop (U.S. Gold / Epyx)
$ 5.00 The Advanced OCP Art Studio (Rainbird)
$ 5.00 The Games (Epyx)
$ 4.00 The Pawn (Rainbird)
$ 4.00 The Sentry (Firebird)
$ 6.00 Tower Toppler (U.S. Gold / Epyx)
$ 6.00 Warship (Strategic Simulations, Inc.)
$ 5.00 Winter Games (Epyx)
$ 5.00 World Games (Epyx)
$ 5.00 World Karate Championship (Epyx)
$ 4.00 Zero Gravity (MicroDeal)
$ 4.00 Zynaps (Hewson)

*****

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3 for the first game and $1.25 for each additional game, unless otherwise listed. If you order enough items I can weigh the order as a package, which might reduce the shipping costs. Foreign orders welcome.

Large orders will be weighed as a package, to reduce shipping costs.

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly
listed.

7) If you have a problem with the listed price, please remember
that nobody is forcing you to buy from me. I have been in
business since 09/05/93, so I have a good idea how to price
items. My personal philosophy is that something is only worth
what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money
order, drawn from a U.S. bank branch. Orders from outside the
U.S. are also accepted (also, please check out my want lists,
since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to
correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are able to follow through on your
order *before* you place it,
3) next send me a list of the items that you are interested in,
4) also include your full name and full postal mailing address
(this information is for internal VGA use only)!
5) I will reply with a shipping information message for your order.

Thank you!

DRAM. But not SIMMS. Memory is soldered to the board on STFM models. If you want to extend memory, you will need a special expansion board that will allow you to use standard PC SIMMS. The brand new magnum ST allows up to 14Mb in an ST, but there are plenty of others.

Did you also get the cubase dongle key?
When you buy cubase, you buy the key, which is a dongle that you have
to put into the catridge port. Without the dongle you have nothing.

When you have the dongle correctly installed however and it says no
key goodbye, it must be broken (they useally die when you put them
upside down in the port), you can change it at steinberg.

Hi Mike,
I would suspect that either your keyboard processor (located on the keyboard's PCB) or one of the 6850 chips in the computer is broken and needs to be exchanged.
The keyboard processor is usually socketed, so it's an easy thing to exchange, but the 6850's are always soldered...

Good luck and best regards,
Claes

>
> Michiel Janssens

I do. I have a 1040STe with 4Mb and no harddrive. I have succesfully run both STiK and Sting on my system. All you have to do is to get a ramdisk, and some program that can copy stuff to it at bootup. Two good programs are maxidisk and raminit. These can be found on any good ftp-site. If you want to use gdos then make sure that your fonts are copied to the ramdrive (so that you don't have to have the boot disk in your drive).

My bootdisk looks like this:

auto/
maxidisk.prg
raminit.prg
raminit.dat
drvin.prg
mfp.prg
gdos.prg
sting.prg
sting.inf

sting/
all the sting files (STX:s default.cfg etc.)

fonts/
my fonts

cpx/
the sting cpx:s

xcontrol.acc (or cops or what you like)
miniterm.acc (a terminal might be handy sometimes. I actually use it to login instead of the dialer)
me520.prg (an emacs clone (which is not so good, you can't type the @-sign with it) but use another editor like qed if you want)

Now make sure that raminit copies the sting, cpx, and fonts directories to the ramdisk. Edit sting.inf to say d:\sting (if your ramdisk is d:). Also copy your desired editor to d:. Edit assign.sys so it looks for

fonts in d:\fonts. Start xcontrol and change so it looks for cpx:s in d:\cpx (or edit control.inf).

Now everything should work. You can use gdos-fonts in CAB and other prgs. Set the editor path in CAB (Newsie etc.) to d:\your_desired_editor.

/P. Larsson

SLM804 Atari Laser Printer! Atari Did Not make these Printers, they just put their Name on it while it was sub contracted to some one else. In this case Canon. So if your worried about buying Toner, Drums & more from Atari just go to the Manufacturer or as I did, Best Electronics. Not Atari. This SLM804 recently had a New Drum Put in along with Initializing Toner which is required for a New Drum. It Comes with All Manuals & Disks, Two additional changes of Toner, each good for at least 3000 Sheets, the Old previously changed drum which can be rebuilt like new by businesses that do that sort of thing. Plus UltraScript ST, PostScript for your Atari SLM804 Laser Printer as well as the PS 35 Font Set. Packages 1-7. It Prints 8 Pages Per Minute at 300 DPI (Dots Per Inch). I know this printer very well because I babied it myself. The only reason I'm selling my own Personal Printer is I no longer have need of it. I Produced the Most Professional Output with this Printer. I loved the fact that if any Software for my Atari could support any Laser Printer, it would be this one.....$400 U.S.

Offer only available in the United States.

the Speedo font type is copywrited by Bitstream and they're not
letting go so you have to buy 'em, so either you can buy NVDI which is
damn fast and lot's of free True Type fonts, or Binstream font's which
are nippy but not amazing. Either way money is involved.
you can find the odd teribly dull Bitstream font occasionally though.

I have seen references to videl before but I'm confused about what it is.
It sounds like a video expander for a standard falcon. Is it software or
hardware? What exactly is videl & where do I get it? I certainly good use
a cheap video enhancement for my standard falcon...

I wonder if anyone can help me

I bought FOFT recently, but after a few hours play I haven't got anywhere. My problem is that I hyperspace to another planet and try jumping to the planet, but I get stopped when a spaceship enters the vicinity. If I try to fight the spaceship I quickly get blown to pieces because of lack of firepower; while if I wait for the ship to go away, I have to wait an eternity.

Is there a safe planet I can go to where I won't get attacked, or do I just have to improve my combat skills?

Peter

>Can someone explain the differences between a Falcon and a 1040ST??
>Or point me in the right direction?

1040ST
Have an 8 MHz 68000 CPU and 1MB RAM

Falcon
Have an 16 MHz 68030 CPU and a 32 MHz DSP.
The DSP (Digital Signal Processor) can be used to many things
such as realtime soundprocessing.
The DSP unloads the main CPU from hard signal processing.
Better graphics.
16-bit stereo sound input and output.

3497. TeX to ascii converter

Newsgroup: comp.sys.atari.st
Date: 1997-06-07 00:00:00 UTC
From: bdc2@po.CWRU.Edu
Message-ID: <5nac1f$21i@alexander.INS.CWRU.Edu>
Source record: 121251

I just came across a cute little program written for a VAX that
converts a TeX file into plain ascii. It compiles and runs on my Atari TT.
It is not perfect, and I couldn't complete a file 300K in size, but
it does run. If there is any interest, I could pack it up, source and all,
and post it to the NEW CNAM in a week or so. But only if there is
enough interest. And if the new upload instructions promised for IBP are easy
enough to understand.

>a winner, the 3" HD. They just have to convince everyone that it's
>the HD to go for and if they are as good on convincing people as Atari was
>, well....
>I still thinks JTS is a joke though.
>//Magnus Kollberg

Well, well, Magnus thinks I might make money... So do I. Though this might be a bit off topic, let me just explain things a bit. When it comes to investing I'm a "contrarion". I don't buy stocks unless most "experts" say it's too risky or "stinks on ice" :) JTS trades 100,000+ shares every-day, I like that. People sell stocks for many reasons, sometimes to take a loss. NO ONE ever buys stocks to lose money. For every seller there must be a buyer. What does this tell you?

As a contrarion I don't need to be "right" very often. The "experts" are right most of the time. So what? If JTS gets a few Major notebook makers to go their way, guess what? JTS goes to 9.00+ per share. Is buying JTS risky? YES! However, I don't give a damn. If I lose, I lose. If I win, I win big... When my broker says "STinKS on Ice", I get my checkbook out :)

I'm upping my stake to 20,000 shares. Why? The CFO recently quit. Ohhhh, I'm so scared...<g>

Maybe you're right and JTS is a joke. Only time will tell and timing is everything, OK? If I'm right I'll laugh all the way to the bank. Other-wise, I'll take the loss and move on to other things. As I said, I don't give a damn. Watch the iterations and "Roll the dice..."

"Caveat Emptor",

Charles

The Speedo fonts used by the earlier versions of Speedo GDOS (<v5) were
proprietary to Bitstream and are not in the public domain, very heavily
encrypted format no one else has, I believe got an editor for them. They
are available commercially. So you shouldn't be able to find them. Later
versions of Speedo GDOS can use an unencrypted variant (X11 I think) of the
Speedo format that is available as well as Wintel style Postcript Type 1
and TrueType fonts.

>Hummmm...

Yep, that's the version they sent me. Maybe they just didn't want to go to the expense of copying the latest version to floppy <g>.However, the current version is 2.06. You can upgrade to the real current version from their ftp site at: ftp://ftp.steinberg-us.com/dist/atari/

BTW It's worth the trouble to get the upgrade. It seems to run much smoother on my falcon although there aren't many new features.

Good Luck

>Are these results of CAB performance typical? Does anyone have a really
>stable connection? Is CAB a viable WWW browser?

Hi, Thomas.

My experience with CAB and STIK is about the same as yours.
Crashes with bombs.
When configuring STIK, apparently you need 'luck'.
I have not tested STING, since I no linger use a SLIP connection.
PPP is not supported by STING as yet...

I started using CAB under MiNTnet with the cab-for-mintnet overlay file.
The result was, NO BOMBS or crashes!

I now use GlueSTiK instead, which allows me to use the ordinary 'CAB.OVL'
1.21.
Regarding 'CAB.OVL' 1.25, I've heard reports that pictures are not loaded
and so on.

My point is CAB itself and the 'ovl' module are STABLE!

The modules are developed by different people.
This, I think is a problem as far as debugging is concerned.

Maybe STiK and STING will get better.
Let's hope for the best!

Good luck to you!

You can get it with ftp:

ftp.cam.org/users/ypell

There is a '.tgz' and a zip archive.

Best of luck!

3517. Win95 OSR 2.1 CD $35 W/Fat32, Fat converter, Full install

Newsgroup: comp.sys.atari.st
Date: 1997-06-07 00:00:00 UTC
From: jasonben@aol.com
Message-ID: <5nc8u9$d7n$908@usenet85.supernews.com>
Source record: 121271

Win '95 OSR-2.1 on CD with Fat32 Boot Floppy, FAT to FAT32
converter; $35 + 4.50 for Postage/COD, or offer.

Full install version. USB Support. This CD also contains
the Microsoft FAT to Fat32 converter.

Are you tired of losing up to 40% of your disk capacity
to the huge cluster size of FAT16, P-n-Pray that does
not work, poor pcmcia support, misidentified motherboard
resources, CPUs, ect?

Well, moving to the OSR 2.1 version of Windows '95 is the
answer.

Win '95 OSR2 also contains important patches, an expanded
(and debuged) drver library, PnP that works, GUI improvements
and bug fixes.

Yes - Some, not all, of these are available for as downloads.
Yet - The most important parts: *FAT 32*, the Kernel and GUI
enhancements, PnP improvements and proper CPU identifier codes
are NOT available for download and currently can only be
obtained with the purchase of a new computer or "memphis"
(Win'97), whenever that will be available.

The CD is the full install version. Included is a OEM cd-key,
an OSR2 boot floppy for creating a new FAT32 partition, MS CVT.EXE
for converting a FAT partition to FAT 32 detailed installation
instructions. In addition to these instructions, there is full
documentation on the CD. There is no "paper manual." Except
detailed installation information. Your current Win '95 manuals
will still apply, with a few *highly documented* exceptions.

The primary reason for migrating to OSR2 is, of course, FAT32,
which increases the storage capacity of your drive simply
by keeping the cluster size at 4K, despite the size of your
hard drive. It also recognizes partitions larger than 2.1g,
the current Win '95 limit.

I was hoping to get $ 35 for the CD, Boot Disk and instructions,
+ 4.95 for USPS COD. I am, however, open to reasonable offers.
I will pay shipping on pre-paid orders.
E-mail for more information.
Jason

I have a very different experience with STiK and CAB. It's as stabel as
anything can be.

I did have some help from a friend to set it up, now it's running without any trouble at all.

I been using CAB v.1.5 and v.2.0, and it works.

Hi

>Are these results of CAB performance typical? Does anyone have a really
>stable connection? Is CAB a viable WWW browser?

I would say that the results you are getting are not tyoical. I've used the combination of various versions of CAB and STiK with pretty good results for nearly eighteen months now and with two different ISP's in the UK. Although things are not 100 per cent perfect, I find browsing the web pretty reliable. CAB 2 does seem to have some problems, but CAB 1.50 is better on some sites (IMO).

>I am not knocking the efforts that have been made in Atari internet
>connectivity...I realize these programs are largely produced by

>the performance of CAB can meet my minimal expectations. I would,
>however, like to hear from others using CAB/STiK/STinG and compare how
>they think CAB is doing...I might need to tweak more.

TBH, some of the problems you are blaming CAB for could really be down to STiK/STing and the CAB OVL. CAB is really just the browser, the others provide the connectivity and often most problems will be in there. I've had to change my STiK and OVL files a few times to get a pretty stable set-up. It's really just a question of trial and error as I see it. Not ideal, but even MAC and PC owners have these problems, so we are not alone!

: >Can someone explain the differences between a Falcon and a 1040ST??
: >Or point me in the right direction?

I highly suggest you go for the Falcon over the ST.

A Stock Falcon gets VGA resolutions...256 and true color modes.
Double the CPU speed...also a 68030 as opposed to the ST or STe's 8mhz
68000. Falcon also gets a nice 32mhz DSP for jpeg, mpeg, and audio
compression/decompression (and other things as well). The most
colors you'll get on an ST or STe will be 16 colors in the lowest
resolution, a blocky 40 column mode! To get VGA type resolutions on the
ST, you're restricted to a special 2 color mode, and a monochrome monitor.

The Falcon also has built in IDE and SCSI interface for connecting most
any IDE, EIDE, SCSI, or SCSI II device. Another really nice thing about
the Falcon is that it can address up to 14meg of RAM, where the ST and STe
machines can only address 4meg. Falcon's also come presocketed for an
optional FPU.

The Falcon can easily be upgraded to 32mhz processor, and newer boards
allow you to boost the bus speed and DSP speed as well. I.E. the Nemisis
board will let you even out the entire machine to somewhere around 25mhz
reliably, which offers more resolution on the video end of things. Also,
is the option of the Afterburner 040 board with TT ram.

Falcon also gets a LAN port, thoe there aren't a whole lot of devices out
there that use it as far as I know. One example of some known drivers for
this port, are in using some of the Macintosh MIDI interfaces with CuBase
Audio Falcon.

The Falcon also has the capability of offering up to 16 tracks of CD
quality direct to disk digital recording. There's a slew of great
hardware/software enhancements for the Falcon where audio is concerned.

It's definately worth a few extra bucks to pick up a Falcon over an ST!

Brian

3528. GE-Soft RAM Expansion Board

Newsgroup: comp.sys.atari.st
Date: 1997-06-07 00:00:00 UTC
From: mlake@melake.erols.com
Message-ID: <slrn5pjdff.4d.mlake@melake.erols.com>
Source record: 121282

I have a TT with a GE-Soft RAM Expansion Board installed. I got the TT second-hand and it arrived with 16MB of RAM on the GE-Soft board. I'm trying to add another 16MB of RAM but the TT will not recognize more than 16MB. I know the new RAM boards work ok because I've switched around the boards and the TT always recognizes only 16MB.

There are two jumpers on the GE-Soft board labeled J0 and J1. Each jumper has 3 pins. On jumper J0 pins 1 and 2 are covered. On J1 pins 2 and 3 are covered. Do these jumper configurations need to be changed for the whole 32MB to be recognized by the TT?

This sounds very much like your setting of VJ header compression doesn't
match the one your ISP uses. Toggle the VJ header compression switch and
try again. Note with STinG you need a fairly recent SERIAL.STX for this.
Or ask your ISP whether they use SLIP or CSLIP ...

Cheers Peter

From: perot@suse.modem.stud.uni-hannover.de
Message-ID: <EBErFy.L20@suse.modem.stud.uni-hannover.de>
Source record: 121285

Some people had some trouble getting STinG to work on Atari 1040 STE's. Someone told me that when the AUTO folder sequence is DRVIN, STING, MFP, MIDI, the machine won't bomb anymore, but work fine. J. Kock found out then when setting MFP.PRG to NOT install an RSVE cookie, the machine works well again. Both tips worked, and gave me the hint where to look.

I had the opportunity to play with an 1040 STE today. I found the bug and fixed it. Please get the new version from my home page (CORETOOL.LZH). Note the main distribution (STING.LZH) doesn't contain this fixed kernel yet. With this bug-fix version, the abovementioned kludges are not neccessary anymore. In fact I strongly suggest to rearrange the AUTO folder to have the programs in the proper sequence, i.e. first all HSMODEM components, then STING.PRG.

Cheers Peter

>a cheap video enhancement for my standard falcon...

VIDEL is a software enhancer. Take it from some CD-ROMs, FTPs or PD-Disks.

If you use VIDEL you can blow up you screen resolution.

You get better results with an hardware screen enhancer like BlowUP or ScreenBlaster.
Both are as a combination of hard- and software.
(Software is to setup and create screen resolutions and there relevant .inf files)

Screenblaster have two hardware modules.
You can take it as an internal or an external release.
(Both releases needs the same software) -- VMG (V)ideo(M)ode(G)enerator

Ask http://www.overscan.com (screenblaster)

I use screenblaster by my self for some years. It's a great hardware.
926x608x16 with a simple old 15" VGA Msync (non interlaced)
(Sure, i can get a higher resolution, but than are all icons grazy smal) ;)

regards, robert

Hi Mike... I just (this week actually!) purchased an Expose from Toad Computers. Its used and currently non-functional. Stamped on the underside of the RGB splitter was a sticker that said, "Tested OK-Floating Fish Studios"...so I'm assuming they sent it back because they could not get it to work. (I hear they have 3 working models) I've been in contact with Titan Designs, who have been very helpful. They E-mailed a list of items within the RGB splitter that might fix the problem when replaced. I'm not qualified to do it myself (I installed a RSVE serial port upgrade in my Mega but thats about as far as I can go), so I'm sending it to a local electronics shop. Right now, I can use Fal-Cam, FalCube, and Apex but all I get is a window from either app., that is completely green, no picture. I'm really, really hoping the changes Titan recommends will cure the prob. You might contact Toad and see if they have any others, and gamble that you can get it fixed. Thats basically what I'm doing-gambling it can be fixed. Well, I'm hoping anyways... Hope this helps...! :)

: all these installation problems. I understand that they might be
: commercial, but if they're good and they work it might all be worth it.

Well, I have few of the problems you're having, and I'm using 302 fonts on my hard drive with 1,250 off a CDROM (only when I need it though). Firstly, turn checking off in the Fonts and Caches CPX. That'll solve the message problems. As for more fonts, contact me and I'll see if I can find you some fonts cheap (e-mail, obviously). :)

The only software that I can think of off-hand is Apex Media for the Falcon and MultiPlayer v2.49, which runs on any Atari. I'm not too sure on how you would accomplish the conversion with MultiPlayer; you might have to load the *.SEQ file into ram, then save all the frmaes of animation separately, then load them into memory and save them as an *.AVI or *.FLI... I'm not too sure, since I've never used it for that function. If you have a Falcon, though, and can afford Apex Media, then it'll conver the file from *.SEQ to *.FLI format very easily. BTW, MultiPlayer is shareware, so I'd opt for that avenue first... :)

for a friend who wants a Atari computer. We're looking for a system with a Hard drive, Fax Modem, Color monitor, Video & Sound Digitizer... so he can put his songs and pictures on his web site and tons of software. If you have a system, as I discribed, hit me with your price so I can pass it on. He's looking to buy ASAP so he can get hooked into/onto the Internet.

- Thanx!!!!

Source record: 121183

Is there a good collection of Falcon icons anywhere? I have search hard and found nothing. I did find a good collection of ST icons though, but no color falcon ones. The ones that come with the Falcon suck.Thanks for any help.

I have a Falcon with an 85 mb internal HD. How high capacity a drive can I replace that drive with and is it a simple task? Can I just use a standard 500 mb or 1gb laptop size IDE drive? And what utilities do I need to format a new drive? Only answer if you know for sure. I've filled up the 85mb drive already. :P Thanks.

Sorry, I'm really anxious to get the most out of my new Falcon,and help
is scarce. I'll stop after this. :P
I keep thinking of new things. Is there a program that can display
gifs or jpegs on the Falcon desktop? Also does anyone happen to remember an
old dragon picture that was popular circa 1986-87 on the ST, I think in
degas format? It was unforgettable.That would be cool for a 16 color
desktop pic but my floppy with it went bad years ago, anyone have that one?

It wasn't Speedball or Skweek.

This name of this game has been driving me crazy for over two weeks.

All I can remember was the name of the game was kinda funny. It was a
real fun game though.

Download Maggie v23 (the Falcon version) and read the review they have in
there... Lots of info and details as well as compatibility issues. Darned
fine read for Falcon owners anyways! :)

SpeedBall ?

Shurely Shome Mishtake ?

Speedball wasn't furry.
